

Salesforce Data Compliance

Control of Sensitive Data Is Key

Legal and Regulatory Data Compliance is now mandatory when using and deploying SaaS and Web Applications.

What is eperi Cloud Data Protection for Salesforce?

eperi CDP is a software based solution implemented as a transparent data control layer allowing customers to enforce data protection compliance via a single point of architectural control prior to sensitive data being stored or processed in Salesforce.

Why Customers Use eperi CDP for Salesforce

- Helps address legal and regulatory data compliance requirements.
- Meet GDPR data compliance requirements through encryption and pseudonymization.
- Enforces data compliance protection policies through a single point of control.
- Retains important Salesforce functionalities and does not impact user experience.

Meet Data Compliance

- Ensure centralized compliance control
- Maintain sole control of sensitive data
- Only the customer has access to sensitive data

Minimize corporate risk and compliance exposure

Enable Sole Control of Data

- Customer controls the data protection
- Reduces risk of data loss
- Compromised encrypted data is meaningless

Reduced risk with full data control

Seamless User Experience

- Does not impact the user experience
- Transparent data protection layer
- Leverage full advantage of Salesforce including search

No impact to user acceptance
