HONEY BEE HABITAT HUNT

FUN FACT!
ONE BEE HAS TO FLY ABOUT
90,000 MILES – THREE TIMES
AROUND THE GLOBE – TO MAKE
ONE POUND OF HONEY.

Go on a hunt in your own backyard or grab a parent and go to a nearby park to see if you can spot all the important components of a honey bee habitat.

A PLACE TO CALL HOME

Bees like to nest in a variety of places – trees, roofs, and even underground. Can you find a perfect place for a hive?

PROTECTION FROM THE SUN

Bees enjoy sunshine but need shade too. Can you find a shady area suitable for our buzzy friends?

WATER

Like most animals, honey bees need fresh water. Look for puddles or a nearby pond.

NECTAR AND POLLEN

A bee must collect nectar from about 2 million flowers to make one pound of honey. Look for flowers – any kind will do!
