CLOUD SECURITY ASSESSMENT SERVICE

The cloud is not secure by default, so it is essential to prepare your organisation for tomorrow's organisational challenges and risks. Comtact's Cloud Security Assessment probes for misconfigurations or non-standard deployments in your end-to-end cloud environment. Cloud environments require continuous evaluation together with effective governance to ensure implementation of best practice cloud security strategies.

Comtact Ltd.'s Cloud Security Assessment Service provides a comprehensive assessment of your Cloud environment to assist your organisation in understanding your cyber security risk while giving you a bird's eye view of your cyber defences, identify weaknesses, suggest effective improvements and demonstrate how these affect your overall cyber security posture.

DO I NEED A CLOUD SECURITY ASSESSMENT?

If you find yourself asking any of these questions, a CSA may bring value to you:

> I want to migrate to the cloud, but what risks may come my way?
> I already made the move to the Cloud but it's completely different than the usual infrastructure. How can we secure our existing Cloud environment?
> We migrated sto the Cloud for efficiency and cost savings, and we think that we're reasonably secure… but as I'm seeing many cyberattacks on Cloud environments, could we have our environment validated by Cloud Security experts?

BENEFITS OF A CLOUD SECURITY ASSESSMENT

Moving your IT environment to the cloud can seem like a significant undertaking. Here are some of the advantages you will benefit from with a Cloud Security Assessment:

> Security will become measurable
> Meet security audit requirements and standards
> Prioritise all security risks
> Focus on how to mitigate the risks found

Comtact's Cloud Security Assessment is both for customers who are at the beginning of their cloud journey, as well a those who may already have cloud-delivered IT services.

Understand your current Cloud posture

Protect your critical cloud assets and data

Recommendations to secure your Cloud environment

Define effective cloud security strategy

SERVICE DETAILS

At Comtact, we understand that not all our clients are on the same page and have different requirements when it comes to migrating to the cloud. This is the why we adopt a personalised approach to help guide your path towards the Cloud.

Implementing cloud technology helps unleash your organisation's agility & performance, keep ahead in a competitive market while controlling costs and mitigating business risks.

To help simplify the journey, Comtact's Cloud Security Assessment follows four simple phases to understand your security posture and and protect your critical assets.

1 UNDERSTAND YOUR CURRENT CLOUD CYBER SECURITY POSTURE

- Key business challenges and drivers.
- Governance & compliance requirements.
- Understand targets, objectives and concerned assets
- Focus on a risk-based approach

2 PROTECT YOUR CRITICAL CLOUD ASSETS AND DATA

- Get internal and external view of your critical assets.
- Identify areas for immediate and critical improvement.
- Recommendations and mitigation plans for improving compliance.

3 GET RECOMMENDATIONS TO SECURE YOUR CLOUD ENVIRONMENT

- Offer remediation methods to mitigate risks.
- Risk-based report with actionable recommendations.

4 GET YOUR PERSONALISED EFFECTIVE CLOUD SECURITY STRATEGY

- Gap analysis report.
- Implement solutions to drive uptime and increase security.
- Deployment model and strategy.

KEY DELIVERABLES

The Cloud Security Assessment includes a comprehensive assessment and report on the finding by Comtact's specialists:

INITIAL ASSESSMENT
Detailed evaluation of overall business drivers and objectives a review of your IT organisation. Assess the maturity of your cloud's security controls by comparing against best practices.

CONSIDERATION OF EXISTING SECURITY POSTURE
Develop a maturity ranking of existing security posture in consideration of cloud security goals and a gap assessment

ACTIONABLE RECOMMENDATIONS AND REPORT
Provide specific recommendations on action items or considerations for addressing identified issues. A detailed risk-based report will be provided including the above as well as recommended changes to security policy, procedures and guidelines. Recommendations will also be provided for changes to security architecture and security management systems.

TCO ANALYSIS
Detailed cost-forcasting exercise to understand future cloud consumption requirements, based on existing workloads, comparing overall costs between your current IT spend and future estimated spend.

DEPLOYMENT STRATEGY
Detailed deployment strategy and recommendations, including roadmap for future phases.

ABOUT COMTACT LTD
