

Software Vulnerability Manager

Stop reacting. Gain control. Stay secure.

Benefits to Your Organization:

Vulnerability Intelligence by Secunia Research

Visibility of all your software and their patch status

Patch prioritization based on the risk for YOUR business

Connect assessment and patching to effectively reduce time to remediation

Reduced cost for patching

Today, it takes organizations too long to identify and fix software vulnerabilities. The result is an ever-growing number of unattended vulnerabilities which give cyber attackers a large window of opportunity to get their grip on systems and execute attacks. It's critical to address this risk window in order to reduce the odds of attacks, and stay secure.

Software Vulnerability Manager is the solution to close gaps in vulnerability and patch management programs. It gives you the intelligence and the technology to assess, prioritize and fix software vulnerabilities, giving you full visibility and control over the risk window.

Ultimately, it's All About Process

Processes are the backbone of any program to effectively mitigate risk. It is critical for the security of your business to build processes that connect policies with software vulnerability and patch management activities. Such processes ensure that critical vulnerabilities are addressed accordingly, that you maintain a clear picture of your environment and that you have full understanding of how vulnerabilities and patches are being managed.

Our solutions are founded on vulnerability intelligence and world-class technology so our customers are confident that they don't just react to crisis when attacks happen. Instead, they gain control over the entire software vulnerability management lifecycle and stay secure.

Features Assessment

Discover and track over 20,000 applications across Windows, Mac and Linux platforms. Flexera offers multiple options – agent or agentless – to collect inventory and determine patch status. Our proprietary scanning technology is non-intrusive and detects .EXE, .DLL and .OCX files regardless of their installation path.

Secunia Advisories

Understand the criticality of the vulnerability with the ratings provided by Secunia Research. Secunia Advisories contain detailed information on the vulnerability, attack vector, impact and more. They provide the ground information to understand risk and determine actions.

Smart Groups

Build processes and drive action using the Smart Groups function. There are many ways you can use this feature, e.g.: you can group systems that have similar policy for patching and are managed by the same team. In that way alerts go automatically to relevant teams and actions are taken faster. Smart Groups can be configured by devices, products or advisories.

Non-Microsoft Patching for Windows

Complete your patch management programs with full coverage of non-Microsoft applications for assessment and pre-packaged patches for the most common Windows desktop applications. Our specialists disable prompts to accept EULA and creation of short cuts and deliver the packages in the Software Packaging System.

Software Packaging System

Easily implement applicability rules; configure updates, uninstall and custom packages using this functionality. The packaging system simplifies configuration of patches. Patch Templates allow to save configurations to automate and streamline repeatable activities.

Integration with WSUS and SCCM

Integrate with your Microsoft tools for inventory collection and patch deployment. Assess the patch status of all your Microsoft and non-Microsoft applications on Windows and drive patching of non-Microsoft apps through WSUS or SCCM

Live Updates

Get alerts based on latest assessment when extremely critical vulnerabilities arise in between scans. Act fast and avoid the risk of exploitation.

Dashboard

Get a clear understanding of the vulnerability status of your environment. Follow remediation activities, trends. Select the views that matter to you and that help you identifying issues and drilling down for more information

Reporting

Produce customized reports and keep your team and organization informed of the status of compliance with policies and regulations. Report on vulnerability risk and patching activities.

"I would recommend Flexera Software Vulnerability Manager. It's played a large part in the automation of our Windows patching process."

— **Jim Anderson,**
IT Project Manager, Kohl's Corporation

About Flexera

Flexera is reimagining the way software is bought, sold, managed and secured. We view the software industry as a supply chain, and make the business of buying and selling software and technology asset data more profitable, secure, and effective. Our Monetization and Security solutions help software sellers transform their business models, grow recurring revenues and minimize open source risk. Our Vulnerability and Software Asset Management (SAM) solutions strip waste and unpredictability out of procuring software, helping companies buy only the software and cloud services they need, manage what they have, and reduce compliance and security risk. Powering these solutions and the entire software supply chain, Flexera has built the world's largest and most comprehensive repository of market intelligence on technology assets. In business for 30+ years, our 1200+ employees are passionate about helping our 80,000+ customers generate millions in ROI every year.
