# INFINITE GROUP, INC. CYBERSECURITY SERVICES

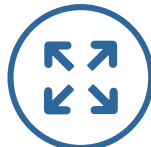

Security is a growing concern of every organization in every industry in the world.

With 47% percent of all breaches in 2017 caused by malicious or criminal attacks, it's time to rethink your security approach.

## Information Security

Protect your organization's critical information from theft or inadvertent disclosure.

## Operations Security

Secure your computer networks, data storage, and all devices that connect to your network.

## Social Engineering

Ensure employees and vendors aren't purposely or accidentally exposing sensitive data.

## About Us

It is proven that communicating a proactive security plan improves the overall value of your company. Yet, many organizations don't know where to begin or how to identify their security gaps. Luckily, that's where IGI excels.

Our team of IT security professionals has more than 20 years of IT and cybersecurity experience, including military counterintelligence. Our entire security team also maintains recognized industry certifications, including Certified Information Systems Security Professional (CISSP).

IGI will help you to understand the best security approach for your organization, and how to save money along the way. We strive to build long-term partnerships with customers where everyone benefits—especially your security posture.

# CYBERSECURITY SERVICES

Excellent security doesn't happen overnight. Since every organization starts at a different place on the security spectrum, it takes careful planning and implementation to build a security plan that is customized to your needs. Our available services include:

## Incident Response

IGI's team has built an effective process for responding to cyber incidents quickly to reduce the impact to your business. We immediately detect and analyze the incident, work to contain, eradicate and recover; set up post-incident protection and continuously monitor the situation.

## SIEM/SOC as a Service

A critical component to any security plan, IGI's SIEM services powered by EventTracker can help by improving log analysis, awareness, detection and incident response across all of your servers, workstations, network devices, locations and teams.

## Security Assessment

Our team will provide a comprehensive risk management assessment of your organization to identify potential risks in all areas, then present a variety of options to mitigate those risks and expand your security posture with an complete security program.

## Penetration Testing

Conduct in-depth testing of your network infrastructure to identify any potential weaknesses that could be utilized by hackers to infiltrate your network. We offer a wide range of tests, including:

- Internal Pen Testing
- External Pen Testing
- OWASP Web Application Scanning

## Compliance Readiness

IGI will ensure your IT governance and compliance is in check with a wide range of audit services for a variety of industry standards and regulations, including: Education, Finance, Health Services, Retail, Construction, Utilities, Insurance, Manufacturing, Real Estate, and Security.

## Social Engineering & Training

IGI will customize a security awareness program that meets the specific requirements of your business, industry and location. Our consultants cover a wide variety of subject areas including how to identify phishing emails, raising security awareness, and much more.

## Vulnerability Assessment

Leveraging IGI's own vulnerability management solution—Nodeware—our consultants will perform a thorough review of your organization's vulnerabilities and present a detailed report, demonstrating areas of weaknesses and recommendations to heighten your security posture.

## Virtual CISO

Get the specialty skills you can only get from a CISO without hiring additional staff. Use IGI's security talent to manage your security policies and standards on an ongoing basis, or for a special project or transition period.

# OUR APPROACH

IGI delivers best-in-class security services through comprehensive review across critical security domains: information systems, operations, and social engineering. Our integrated approach is the best way to protect your people, property, and information, while giving you the guidance to effectively address the security gaps we uncover.

## Assess

Like any good strategy, we start by assessing who you are and what you need to bring your cybersecurity to the next level. Our team performs in-depth reviews of your policies, processes, procedures, and physical assets to not only ensure regulatory compliance, but to help prevent cyberattacks. We ask the tough questions to make sure your security is tough enough.

## Architect & Recommend

We know your industry and now, we know you. The IGI team creates actionable plans with clear milestones that consider your budget, time and resource constraints to deliver practical solutions. Our team takes a no-nonsense, straightforward approach to cybersecurity services, recommending the ideal solutions for your toughest

## Implement & Manage

With IGI Security Services, our team is a part of your team. Since we're there from the very first call, we know your current state, where you need to be, and how to get there. Once we implement the technologies, process and procedures you need, we're there to monitor and support them along the way.
