

Protect your assets

Investing in the right agricultural machinery can be one of the most important aspects of farming. But if the machinery is not well-protected from harsh environmental elements, the value of that investment can be seriously eroded.

Alpine Buildings has helped thousands of New Zealanders, including farmers and contractors who spend a lot of money on high quality machinery, to protect expensive gear from the harsh elements. As well as being incredibly robust, all Alpine Buildings are designed to be bird-proof, meaning the rafters are free of places to perch and make nests, meaning machinery won't get damaged by acidic droppings.

Alpine 'pre-finished' kitset sheds are sold throughout New Zealand, and are designed to withstand the country's harsh elements. With nearly 40 years experience, Alpine Buildings was the first company to enter the market with a truly complete kitset shed – and claims to be leading the market even today, with new innovative products and world class service.

When investing in an Alpine kitset building, the hard work is already done. Farmers and builders throughout New Zealand really love how fast and simple they are to construct, and a complete service is offered, right from the moment building consent is lodged.

The Alpine Range

Alpine has a large range of farm buildings on offer and any of the standard agricultural sheds can be specifically designed to suit the needs of the farmer or contractor. Customised options can also be included, boasting items like roller doors, clear-lights, internal walls, building paper and much more. All buildings are site-specific and designed for high wind speed and snowfall, providing total peace of mind.

One Alpine Buildings customer from Canterbury was recently quoted as saying "Alpine was a very good company to deal with and great when tailoring the building to meet purchaser requirements."

Timber and Steel construction

The unique bird-proof steel rafter system that Alpine uses comprises of a galvanised box section rafter, and is the strongest and smartest looking design on the market. The most common sizes – 9m, 12m, 15m and 18m wide clear-span – are kept in stock, with other sizes also having very fast lead times.

Alpine takes great pride in supplying the highest quality products available. Its building system uses only the straightest H5 timber poles, and the steel rafters have pre-fabricated joist hangers. Being the fastest sheds on the market to erect, many builders now buy directly from Alpine because of the time and money saved.

Alpine Kitset Buildings

Everything is thought of when an Alpine pre-finished shed is supplied. The kitset pack will turn up to the location with not a single screw missing. The kitset sheds are easy to set up and well organised.

A West Coast farmer who recently bought his ninth Alpine kitset shed put it this way: "We love putting up our Alpine sheds. They are tidy, very well-organised, on time, well-priced, no problem sheds. They're great sheds and good people to deal with too." ■
