

Built fast and built to last

Alpine Buildings supplies a large range of high quality clearspan buildings and sheds to farmers, contractors and builders all around New Zealand.

The company is committed to supplying the fastest and easiest to build kitset farm sheds in New Zealand, without compromising on quality.

Why build with Alpine?

A key feature of the Alpine design is the bird-proof steel rafter system, a proven cost-effective and time-saving feature. This has been designed and improved over time, and outperforms any other pole shed design on the New Zealand market.

The timber purlins are simply bolted to pre-welded joist hangers on the side of the rafters, meaning there is nowhere for any birds to perch or nest in the roof cavity.

Other stand-out features includes pre-dried roof timber, plumb-cut beams, free delivery direct to the site and superior after-sales support.

Alpine Building's team of over 20 staff is dedicated to delivering top quality service, and will even arrange the building consent for you.

Construction

Alpine structures are designed and engineered specifically for wind and snow loadings at your site.

All timber is H3.2 tanalised or greater, and poles are H5 treated for 50 years protection. The timber roof purlins are stacked to dry for around six months before packing into a kitset, making it a lot lighter, easier and safer to build with.

Being the fastest sheds on the market to erect, many builders now buy directly from Alpine because of the time and money saved. Once the building consent is approved, the shed can typically be delivered within two to three weeks, but this is flexible. ■
