

Service Bulletin— Product Update Overview (8.30.2018)

Affects AeroVironment Decision Support System (AV DSS)

AV DSS Product Update Intro

AeroVironment’s Decision Support System (AV DSS) web-based architecture enables the delivery of seamless product updates so that users always have the latest software version and product features. On August 30, 2018, AV DSS and Uploader will be automatically updated with a number of performance improvements, UI enhancements and feature updates.

Key Product Updates

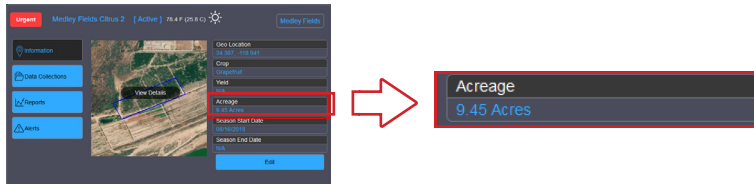

UI Improvements – Increased Speed, Streamlined Navigation and User Menu

In addition to improving the Dashboard’s load time, we’ve streamlined the Top Menu Navigation making it easier to access key functions. A redesigned User Menu now features consolidated account related information, allowing users to view all of their account settings at-a-glance, or manage multiple user accounts. Finally, when scrolling down through the main Dashboard Page, you’ll notice a Top Arrow navigation icon. Simply click on it to quickly return to the top of the page.

View Acreage Size

Now when you select a field to view, Acreage will be automatically displayed for the Area of Interest.

Setting Location Area using Coordinates

When creating a new location, you can quickly navigate to the desired area by simply inputting the Geo location coordinates into the Search bar.

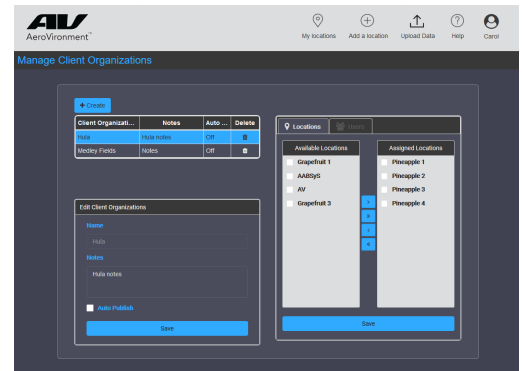

Colorized NDVI Downloads

In addition to Multispectral and True Color imagery, you can now download colorized NDVI files in full resolution from the location's Data Collections tab.

Service Provider Support

Through a centralized Client Organization Manager, Service Providers can Add, Edit or Modify client related details including assigned users, locations and data collection publishing options. In addition, Service Providers will now be able to see the status of a publication to a client, filter locations by Client Organization Name, and cross-reference Client Organization with each location. Service Provider features require a Service Provider account - if you are interested in learning more contact CIS Sales: CISdealersales@avinc.com

AV DSS Help Center

Redesigned from the ground up, the new AV DSS Help Center is the place to find information, tutorials, user manuals, and more. Access step-by-step user guides, videos, Tips & Tricks, and detailed instructions for using each part of the Quantix & AV DSS Ecosystem. With an expanding Knowledge Base and FAQ section, the AV DSS Help Center will help you quickly locate the answers, guides and resources you need, whenever you need it.

Other Improvements and Bug Fixes

In addition to key product updates, we've fixed minor bugs and implemented stability updates to the Uploader and AV DSS to improve their speed and efficiency.

What's Next

These updates will automatically take effect on 8.30.18. In addition to these updates, we're asking that all AV DSS users review and electronically sign the EULA (End User License Agreement) before accessing the AV DSS dashboard.
