

Online software is an EMS information management solution.

This is post we'll explore information management needs of EMS/ and ambulance service providers, the solutions currently available, and how the AIM System is strategically positioned to best meet your unique needs and improve your business' bottom line.

In this post, we highlight online software as an EMS information management solution, and we examine the benefits of the our Online EMS Software. First let's take a look at factors that a prospective Online EMS Software solution user must evaluate.

Is Online EMS Software Right For You?

Are you thinking about switching to an Online Software solution? Then consider the following:

- Are you still doing all your patient care reporting and bill processing on paper, by hand?
- Are you dissatisfied with your current information management or billing solution?
- Is your business expanding, and are you outgrowing your current information management or billing solution?
- Are you looking for a shorter ramp-up and training time?
- Would you like to avoid purchasing costly hardware and network components?
- Do you want affordable monthly payments instead of a larger up-front cost?

- Is 24/7 access to your information management and billing software and data from any computer on any internet connection important to you?
- Would you like to avoid substantial personnel costs required to install, maintain, and support a complex IT network environment? Do you want affordable monthly payments instead of a larger up-front cost? Is 24/7 access to your information management and billing software and data from any computer on any internet connection important to you?
- Does the idea of having all of your updates, maintenance, software support, and back-ups automatically performed for you appeal to you?
- Does shifting responsibility for network and data security to an EMS industry expert make sense to you?
- Do you have experienced and qualified EMS billing personnel in place on-site or working remotely?
- Is having a tried and true EMS information management software and support solution backed by over 25 years of development and industry experience important to you?

The AIM System Online EMS Software Is The Answer

If you answered “Yes” to many of the above questions, Online EMS Software may be the right fit for you. And the AIM System has just the right solution to meet your Online EMS Software needs.

With the AIM System’s Online EMS Software solution, you purchase a monthly subscription for unlimited access to the AIM System software and all necessary support. You need only a computer and a high-speed internet connection to access all of your information stored on the AIM System servers at our business location.

The expert trainers and support staff behind the AIM System provide all the training and support to get and keep your ambulance information management system up and running. This training and support relationship allows you access to all the software support you need from the many experienced EMS and IT professionals behind the AIM System.

You need only a computer and a high-speed internet connection to access all of your information stored on the AIM System servers at our business location.
