BIG BENEFITS WITH PROCESS AUTOMATION

Considerable benefits can be achieved by deploying and monitoring model-driven automated processes.

Myth busted!
You don’t have to be a LEVEL 5 in process maturity to take advantage of process automation.

DIRECTING THE FLOW

Steps

- Process Modeling
  Designing how a business process needs to change/ work

- Process Automation
  Deploying the model to real life

- Process Analysis
  Monitoring process performance to see if the results desired are achieved

BUSINESS NEED

Problems

- **Efficiency**
  Workforce is manually performing steps that could be automated.

- **Performance**
  Interacting with more than one system, logging on to multiple applications.

- **Transparency**
  Executives want visibility into whether or not the overall system improvements tie back into their strategy model.

ROLE BENEFITS

Solutions

- **Employees**
  Moving to an automated workflow distributes and communicates tasks that need to happen in parallel. As a result, each request moves through the process much quicker.

- **Managers**
  Automated workflow enables a single system to collect and report on all data. Progress is seen and bottlenecks are noticed and resolved immediately.

- **Executives**
  Improvement and optimization is clearly visible via Key Performance Indicators.

Adding a layer of automated workflow over the top of existing disparate systems enables one go-to-source for data input, task assignment, data collection and reporting.

Automation — Real and Efficient Progress!  
#GoodbyeBottlenecks!

Automation = Real and Efficient Progress!
