GRADE 4 • MODULE 3

Multi-Digit Multiplication and Division

Grade 4 • Module 3

Multi-Digit Multiplication and Division

OVERVIEW

In this 43-day module, students use place value understanding and visual representations to solve multiplication and division problems with multi-digit numbers. As a key area of focus for Grade 4, this module moves slowly but comprehensively to develop students' ability to reason about the methods and models chosen to solve problems with multi-digit factors and dividends.

Students begin in Topic A by investigating the formulas for area and perimeter. They then solve multiplicative comparison problems including the language of *times as much as* with a focus on problems using area and perimeter as a context (e.g., "A field is 9 feet wide. It is 4 times as long as it is wide. What is the perimeter of the field?"). Students create diagrams to represent these problems as well as write equations with symbols for the unknown quantities. This is foundational for understanding multiplication as scaling in Grade 5 and sets the stage for proportional reasoning in Grade 6. This Grade 4 module, beginning with area and perimeter, allows for new and interesting word problems as students learn to calculate with larger numbers and interpret more complex problems.

In Topic B, students use place value disks to multiply single-digit numbers by multiples of 10, 100, and 1,000 and two-digit multiples of 10 by two-digit multiples of 10. Reasoning between arrays and written numerical work allows students to see the role of place value units in multiplication (as pictured below). Students also practice the language of units to prepare them for multiplication of a single-digit factor by a factor with up to four digits and multiplication of two two-digit factors.
In preparation for two-digit by two-digit multiplication, students practice the new complexity of multiplying two two-digit multiples of 10. For example, students have multiplied 20 by 10 on the place value chart and know that it shifts the value one place to the left, 10 × 20 = 200. To multiply 20 by 30, the associative property allows for simply tripling the product, 3 × (10 × 20), or multiplying the units, 3 tens × 2 tens = 6 hundreds (alternatively, (3 × 10) × (2 × 10) = (3 × 2) × (10 × 10)). Introducing this early in the module allows students to practice during fluency so that, by the time it is embedded within the two-digit by two-digit multiplication in Topic H, understanding and skill are in place.
EUREKA MATH™

2 tens

3 tens × 2 tens = 6 hundreds

30 × 20 = 600

3 × (10 × 20) = 600

Building on their work in Topic B, students begin in Topic C decomposing numbers into base ten units in order to find products of single-digit by multi-digit numbers. Students use the distributive property and multiply using place value disks to model. Practice with place value disks is used for two-, three-, and four-digit by one-digit multiplication problems with recordings as partial products. Students bridge partial products to the recording of multiplication via the standard algorithm.[1] Finally, the partial products method, the standard algorithm, and the area model are compared and connected by the distributive property.

1,423 x 3

1423
×   3
       9 ← 3 × 3 ones
     6 0 ← 3 × 2 tens
 1 2 0 0 ← 3 × 4 hundreds
 3 0 0 0 ← 3 × 1 thousand
 4 2 6 9

1423
×   3
 4 2 6 9

3	1000 +	400 +	20 +	3
	3000	1200	6 0	9
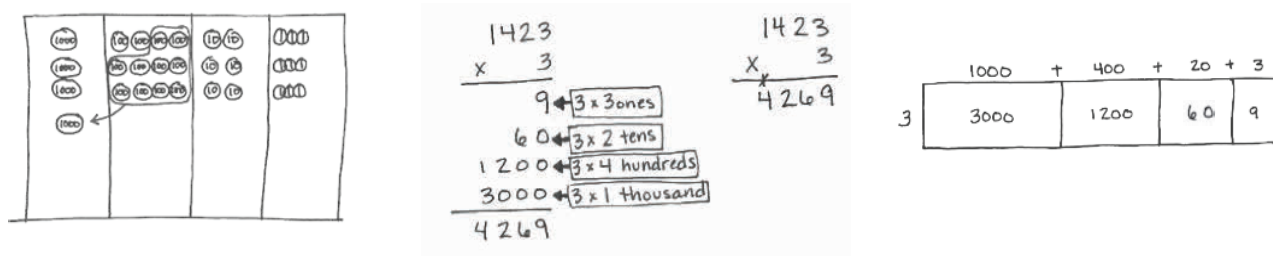

Topic D gives students the opportunity to apply their new multiplication skills to solve multi-step word problems and multiplicative comparison problems. Students write equations from statements within the problems and use a combination of addition, subtraction, and multiplication to solve.

In Topic E, students synthesize their Grade 3 knowledge of division types (*group size unknown* and *number of groups unknown*) with their new, deeper understanding of place value.

Group Size Unknown

24 tens ÷ 3 = 8 tens
     ↗   ↑
# of groups   size of
              groups

240 ÷ 3 = 80

Number of Groups Unknown

24 tens ÷ 3 tens = 8
       ↗   ↑
   size of   # of
   groups   groups

240 ÷ 30 = 8

---
[1] Students become fluent with the standard algorithm for multiplication in Grade 5. Grade 4 students are introduced to the standard algorithm in preparation for fluency and as a general method for solving multiplication problems based on place value strategies, alongside place value disks, partial products, and the area model. Students are not assessed on the standard algorithm in Grade 4.

Students focus on interpreting the remainder within division problems, both in word problems and long division. A remainder of 1, as exemplified below, represents a leftover flower in the first situation and a remainder of 1 ten in the second situation.[2]
While we have no reason to subdivide a remaining flower, there are good reasons to subdivide a remaining ten. Students apply this simple idea to divide two-digit numbers unit by unit: dividing the tens units first, finding the remainder (the number of tens unable to be divided), and decomposing remaining tens into ones to then be divided. Students represent division with single-digit divisors using arrays and the area model before practicing with place value disks. The standard division algorithm[3] is practiced using place value knowledge, decomposing unit by unit. Finally, students use the area model to solve division problems, first with and then without remainders.
In Topic F, armed with an understanding of remainders, students explore factors, multiples, and prime and composite numbers within 100, gaining valuable insights into patterns of divisibility as they test for primes and find factors and multiples. This prepares them for Topic G's work with multi-digit dividends.

Topic G extends the practice of division with three- and four-digit dividends using place value understanding. A connection to Topic B is made initially with dividing multiples of 10, 100, and 1,000 by single-digit numbers. Place value disks support students visually as they decompose each unit before dividing. Students then practice using the standard algorithm to record long division. They solve word problems and make connections to the area model as was done with two-digit dividends.

---

[2]Note that care must be taken in the interpretation of remainders. Consider the fact that $7 \div 3$ is not equal to $5 \div 2$ because the remainder of 1 is in reference to a different whole amount ($2\frac{1}{3}$ is not equal to $2\frac{1}{2}$).

[3]Students become fluent with the standard division algorithm in Grade 6. For adequate practice in reaching fluency, students are introduced to, but not assessed on, the division algorithm in Grade 4 as a general method for solving division problems.

EUREKA
MATH™

The module closes as students multiply two-digit by two-digit numbers. Students use their place value understanding and understanding of the area model to empower them to multiply by larger numbers (as pictured to the right). Topic H culminates at the most abstract level by explicitly connecting the partial products appearing in the area model to the distributive property and recording the calculation vertically. Students see that partial products written vertically are the same as those obtained via the distributive property: 4 twenty-sixes + 30 twenty-sixes = 104 + 780 = 884.
As students progress through this module, they are able to apply the multiplication and division algorithms because of their in-depth experience with the place value system and multiple conceptual models. This helps to prepare them for fluency with the multiplication algorithm in Grade 5 and the division algorithm in Grade 6. Students are encouraged in Grade 4 to continue using models to solve when appropriate.

Notes on Pacing for Differentiation

Within this module, if pacing is a challenge, consider the following omissions. In Lesson 1, omit Problem 1 if you embedded it into Module 2, and omit Problem 4, which can be used for a center activity. In Lesson 8, omit the drawing of models in Problems 2 and 4 of the Concept Development and in Problem 2 of the Problem Set. Instead, have students think about and visualize what they would draw. Omit Lesson 10 because the objective for Lesson 10 is the same as that for Lesson 9. Omit Lesson 19, and instead, embed discussions of interpreting remainders into other division lessons. Omit Lesson 21 because students solve division problems using the area model in Lesson 20. Using the area model to solve division problems with remainders is not specified in the Progressions documents. Omit Lesson 31, and instead, embed analysis of division situations throughout later lessons. Omit Lesson 33, and embed into Lesson 30 the discussion of the connection between division using the area model and division using the algorithm.

Look ahead to the Pacing Suggestions for Module 4. Consider partnering with the art teacher to teach Module 4's Topic A simultaneously with Module 3.

Distribution of Instructional Minutes

This diagram represents a suggested distribution of instructional minutes based on the emphasis of particular lesson components in different lessons throughout the module.

Focus Grade Level Standards

Use the four operations with whole numbers to solve problems.

- Interpret a multiplication equation as a comparison, e.g., interpret 35 = 5 × 7 as a statement that 35 is 5 times as many as 7 and 7 times as many as 5. Represent verbal statements of multiplicative comparisons as multiplication equations.

- Multiply or divide to solve word problems involving multiplicative comparison, e.g., by using drawings and equations with a symbol for the unknown number to represent the problem, distinguishing multiplicative comparison from additive comparison.

EUREKA MATH™

- Solve multistep word problems posed with whole numbers and having whole-number answers using the four operations, including problems in which remainders must be interpreted. Represent these problems using equations with a letter standing for the unknown quantity. Assess the reasonableness of answers using mental computation and estimation strategies including rounding.

Gain familiarity with factors and multiples.

- Find all factor pairs for a whole number in the range 1–100. Recognize that a whole number is a multiple of each of its factors. Determine whether a given whole number in the range 1–100 is a multiple of a given one-digit number. Determine whether a given whole number in the range 1–100 is prime or composite.

Use place value understanding and properties of operations to perform multi-digit arithmetic.

- Multiply a whole number of up to four digits by a one-digit whole number, and multiply two two-digit numbers, using strategies based on place value and the properties of operations. Illustrate and explain the calculation by using equations, rectangular arrays, and/or area models.

- Find whole-number quotients and remainders with up to four-digit dividends and one-digit divisors, using strategies based on place value, the properties of operations, and/or the relationship between multiplication and division. Illustrate and explain the calculation by using equations, rectangular arrays, and/or area models.

Solve problems involving measurement and conversion of measurements from a larger unit to a smaller unit.

- Apply the area and perimeter formulas for rectangles in real world and mathematical problems. *For example, find the width of a rectangular room given the area of the flooring and the length, by viewing the area formula as a multiplication equation with an unknown factor.*

Foundational Standards

- Use multiplication and division within 100 to solve word problems in situations involving equal groups, arrays, and measurement quantities, e.g., by using drawings and equations with a symbol for the unknown number to represent the problem.

- Determine the unknown whole number in a multiplication or division equation relating three whole numbers. *For example, determine the unknown number that makes the equation true in each of the equations 8 × ? = 48, 5 = _ ÷ 3, 6 × 6 = ?.*

- Apply properties of operations as strategies to multiply and divide. (Students need not use formal terms for these properties.) *Examples: If 6 × 4 = 24 is known, then 4 × 6 = 24 is also known. (Commutative property of multiplication.) 3 × 5 × 2 can be found by 3 × 5 = 15, then 15 × 2 = 30, or by 5 × 2 = 10, then 3 × 10 = 30. (Associative property of multiplication.) Knowing that 8 × 5 = 40 and 8 × 2 = 16, one can find 8 × 7 as 8 × (5 + 2) = (8 × 5) + (8 × 2) = 40 + 16 = 56. (Distributive property.)*

- Understand division as an unknown-factor problem. *For example, find 32 ÷ 8 by finding the number that makes 32 when multiplied by 8.*

- Fluently multiply and divide within 100, using strategies such as the relationship between multiplication and division (e.g., knowing that 8 × 5 = 40, one knows 40 ÷ 5 = 8) or properties of operations. By the end of Grade 3, know from memory all products of two one-digit numbers.

- Solve two-step word problems using the four operations. Represent these problems using equations with a letter standing for the unknown quantity. Assess the reasonableness of answers using mental computation and estimation strategies including rounding. (This standard is limited to problems posed with whole numbers and having whole-number answers; students should know how to perform operations in the conventional order when there are no parentheses to specify a particular order, i.e., Order of Operations.)

- Multiply one-digit whole numbers by multiples of 10 in the range 10–90 (e.g., 9 × 80, 5 × 60) using strategies based on place value and properties of operations.

- Relate area to the operations of multiplication and addition.

- Solve real world and mathematical problems involving perimeters of polygons, including finding the perimeter given the side lengths, finding an unknown side length, and exhibiting rectangles with the same perimeter and different areas or with the same area and different perimeters.

Focus Standards for Mathematical Practice

- **Reason abstractly and quantitatively.** Students solve multi-step word problems using the four operations by writing equations with a letter standing in for the unknown quantity.

- **Model with mathematics.** Students apply their understanding of place value to create area models and rectangular arrays when performing multi-digit multiplication and division. They use these models to illustrate and explain calculations.

- **Use appropriate tools strategically.** Students use mental computation and estimation strategies to assess the reasonableness of their answers when solving multi-step word problems. They draw and label bar and area models to solve problems as part of the RDW process. Additionally, students select an appropriate place value strategy when solving multiplication and division problems.

- **Look for and express regularity in repeated reasoning.** Students express the regularity they notice in repeated reasoning when they apply place value strategies in solving multiplication and division problems. They move systematically through the place values, decomposing or composing units as necessary, applying the same reasoning to each successive unit.

EUREKA
MATH™

Overview of Module Topics and Lesson Objectives

	Topics and Objectives		Days
A	**Multiplicative Comparison Word Problems**		3
	Lesson 1:	Investigate and use the formulas for area and perimeter of rectangles.	
	Lesson 2:	Solve multiplicative comparison word problems by applying the area and perimeter formulas.	
	Lesson 3:	Demonstrate understanding of area and perimeter formulas by solving multi-step real world problems.	
B	**Multiplication by 10, 100, and 1,000**		3
	Lesson 4:	Interpret and represent patterns when multiplying by 10, 100, and 1,000 in arrays and numerically.	
	Lesson 5:	Multiply multiples of 10, 100, and 1,000 by single digits, recognizing patterns.	
	Lesson 6:	Multiply two-digit multiples of 10 by two-digit multiples of 10 with the area model.	
C	**Multiplication of up to Four Digits by Single-Digit Numbers**		5
	Lesson 7:	Use place value disks to represent two-digit by one-digit multiplication.	
	Lesson 8:	Extend the use of place value disks to represent three- and four-digit by one-digit multiplication.	
	Lessons 9–10:	Multiply three- and four-digit numbers by one-digit numbers applying the standard algorithm.	
	Lesson 11:	Connect the area model and the partial products method to the standard algorithm.	
D	**Multiplication Word Problems**		2
	Lesson 12:	Solve two-step word problems, including multiplicative comparison.	
	Lesson 13:	Use multiplication, addition, or subtraction to solve multi-step word problems.	
	Mid-Module Assessment: Topics A–D (review 1 day, assessment ½ day, return ½ day)		2

Topics and Objectives		Days
E	**Division of Tens and Ones with Successive Remainders**	8
	Lesson 14: Solve division word problems with remainders.	
	Lesson 15: Understand and solve division problems with a remainder using the array and area models.	
	Lesson 16: Understand and solve two-digit dividend division problems with a remainder in the ones place by using place value disks.	
	Lesson 17: Represent and solve division problems requiring decomposing a remainder in the tens.	
	Lesson 18: Find whole number quotients and remainders.	
	Lesson 19: Explain remainders by using place value understanding and models.	
	Lesson 20: Solve division problems without remainders using the area model.	
	Lesson 21: Solve division problems with remainders using the area model.	
F	**Reasoning with Divisibility**	4
	Lesson 22: Find factor pairs for numbers to 100, and use understanding of factors to define prime and composite.	
	Lesson 23: Use division and the associative property to test for factors and observe patterns.	
	Lesson 24: Determine if a whole number is a multiple of another number.	
	Lesson 25: Explore properties of prime and composite numbers to 100 by using multiples.	
G	**Division of Thousands, Hundreds, Tens, and Ones**	8
	Lesson 26: Divide multiples of 10, 100, and 1,000 by single-digit numbers.	
	Lesson 27: Represent and solve division problems with up to a three-digit dividend numerically and with place value disks requiring decomposing a remainder in the hundreds place.	
	Lesson 28: Represent and solve three-digit dividend division with divisors of 2, 3, 4, and 5 numerically.	

EUREKA MATH™

Topics and Objectives		Days
	Lesson 29: Represent numerically four-digit dividend division with divisors of 2, 3, 4, and 5, decomposing a remainder up to three times.	
	Lesson 30: Solve division problems with a zero in the dividend or with a zero in the quotient.	
	Lesson 31: Interpret division word problems as either *number of groups unknown* or *group size unknown*.	
	Lesson 32: Interpret and find whole number quotients and remainders to solve one-step division word problems with larger divisors of 6, 7, 8, and 9.	
	Lesson 33: Explain the connection of the area model of division to the long division algorithm for three- and four-digit dividends	
H	**Multiplication of Two-Digit by Two-Digit Numbers**	5
	Lesson 34: Multiply two-digit multiples of 10 by two-digit numbers using a place value chart.	
	Lesson 35: Multiply two-digit multiples of 10 by two-digit numbers using the area model.	
	Lesson 36: Multiply two-digit by two-digit numbers using four partial products.	
	Lessons 37–38: Transition from four partial products to the standard algorithm for two-digit by two-digit multiplication.	
	End-of-Module Assessment: Topics A–H (review 1 day, assessment ½ day, return ½ day, remediation or further applications 1 day)	3
Total Number of Instructional Days		**43**

Terminology

New or Recently Introduced Terms

- Associative property (e.g., 96 = 3 × (4 × 8) = (3 × 4) × 8)
- Composite number (positive integer having three or more whole number factors)
- Distributive property (e.g., 64 × 27 = (60 × 20) + (60 × 7) + (4 × 20) + (4 × 7))
- Divisible
- Divisor (the number by which another number is divided)
- Formula (a mathematical rule expressed as an equation with numbers and/or variables)
- Long division (process of dividing a large dividend using several recorded steps)

- Partial product (e.g., 24 × 6 = (20 × 6) + (4 × 6) = 120 + 24)
- Prime number (positive integer greater than 1 having whole number factors of only 1 and itself)
- Remainder (the number left over when one integer is divided by another)

Familiar Terms and Symbols[4]

- Algorithm (steps for base ten computations with the four operations)
- Area (the amount of two-dimensional space in a bounded region)
- Area model (a model for multiplication and division problems that relates rectangular arrays to area, in which the length and width of a rectangle represent the factors for multiplication, and for division, the width represents the divisor and the length represents the quotient)
- Array (a set of numbers or objects that follow a specific pattern, a matrix)
- Bundling, grouping, renaming, changing (compose or decompose a 10, 100, etc.)
- Compare (to find the similarity or dissimilarity between)
- Distribute (decompose an unknown product in terms of two known products to solve)
- Divide, division (e.g., 15 ÷ 5 = 3)
- Equation (a statement that the values of two mathematical expressions are equal using the = sign)
- Factors (numbers that can be multiplied together to get other numbers)
- Mixed units (e.g., 1 ft 3 in, 4 lb 13 oz)
- Multiple (product of a given number and any other whole number)
- Multiply, multiplication (e.g., 5 × 3 = 15)
- Perimeter (length of a continuous line forming the boundary of a closed geometric figure)
- Place value (the numerical value that a digit has by virtue of its position in a number)
- Product (the result of multiplication)
- Quotient (the result of division)
- Rectangular array (an arrangement of a set of objects into rows and columns)
- Rows, columns (e.g., in reference to rectangular arrays)
- ___ *times as many* ___ *as* ___ (multiplicative comparative sentence frame)

---

[4]These are terms and symbols students have used or seen previously.
EUREKA MATH™

Suggested Tools and Representations

- Area model
- Grid paper
- Number bond
- Place value disks: suggested minimum of 1 set per pair of students (18 ones, 18 tens, 18 hundreds, 18 thousands, 1 ten thousand)
Area Model
Number Bond

Place Value Disks

Thousands Place Value Chart

- Tape diagram
- Ten thousands place value chart (Lesson 7 Template)
- Thousands place value chart (Lesson 4 Template)

Scaffolds[5]

The scaffolds integrated into *A Story of Units* give alternatives for how students access information as well as express and demonstrate their learning. Strategically placed margin notes are provided within each lesson elaborating on the use of specific scaffolds at applicable times. They address many needs presented by English language learners, students with disabilities, students performing above grade level, and students performing below grade level. Many of the suggestions are organized by Universal Design for Learning (UDL) principles and are applicable to more than one population. To read more about the approach to differentiated instruction in *A Story of Units,* please refer to "How to Implement *A Story of Units*."

---

[5]Students with disabilities may require Braille, large print, audio, or special digital files. Please visit greatminds.org/contact to request information on how to obtain student materials that satisfy the National Instructional Materials Accessibility Standard (NIMAS) format.

Topic A

Multiplicative Comparison Word Problems

|		
Focus Standards:	■	Interpret a multiplication equation as a comparison, e.g., interpret 35 = 5 × 7 as a statement that 35 is 5 times as many as 7 and 7 times as many as 5. Represent verbal statements of multiplicative comparisons as multiplication equations.
	■	Multiply or divide to solve word problems involving multiplicative comparison, e.g., by using drawings and equations with a symbol for the unknown number to represent the problem, distinguishing multiplicative comparison from additive comparison.
	■	Apply the area and perimeter formulas for rectangles in real world and mathematical problems. *For example, find the width of a rectangular room given the area of the flooring and the length, by viewing the area formula as a multiplication equation with an unknown factor.*

Instructional Days:	3		
Coherence	**-Links from:**	G3–M4	Multiplication and Area
		G3–M7	Geometry and Measurement Word Problems
	-Links to:	G5–M5	Addition and Multiplication with Volume and Area

Students begin Topic A by investigating the formulas for area and perimeter. In Lesson 1, they use those formulas to solve for area and perimeter and to find the measurements of unknown lengths and widths. In Lessons 2 and 3, students use their understanding of the area and perimeter formulas to solve multiplicative comparison problems including the language of *times as much as* with a focus on problems using area and perimeter as a context (e.g., *A field is 9 feet wide. It is 4 times as long as it is wide. What is the perimeter of the field?*). Students create diagrams to represent these problems as well as write equations with symbols for the unknown quantities.

Problem 2: The width of David's tent is 5 feet.
The length is twice the width.
David's rectangular air mattress measures 3 feet by 6 feet.
If David puts the air mattress in the tent, how many square feet of floor space will be available for the rest of his things?
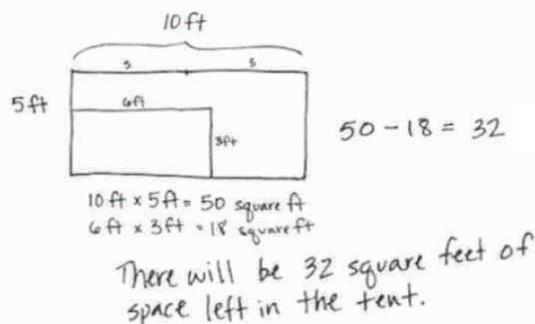

Multiplicative comparison is foundational for understanding multiplication as scaling in Grade 5 and sets the stage for proportional reasoning in Grade 6. Students determine, using *times as much as,* the length of one side of a rectangle as compared to its width. Beginning this Grade 4 module with area and perimeter allows students to review their multiplication facts, apply them to new and interesting word problems, and develop a deeper understanding of the area model as a method for calculating with larger numbers.

| A Teaching Sequence Toward Mastery of Multiplicative Comparison Word Problems |
| --- |
| **Objective 1:** Investigate and use the formulas for area and perimeter of rectangles.
(Lesson 1)

Objective 2: Solve multiplicative comparison word problems by applying the area and perimeter formulas.
(Lesson 2)

Objective 3: Demonstrate understanding of area and perimeter formulas by solving multi-step real-world problems.

EUREKA
MATH™

Lesson 1

Objective: Investigate and use the formulas for area and perimeter of rectangles.

Suggested Lesson Structure

■ Fluency Practice   (15 minutes)
▢ Concept Development   (35 minutes)
■ Student Debrief   (10 minutes)
   Total Time   **(60 minutes)**
Fluency Practice (15 minutes)

- Perimeter and Area   (3 minutes)
- Multiply a Number by Itself   (5 minutes)
- Group Counting   (3 minutes)
- Find the Unknown Factor   (4 minutes)

Perimeter and Area (3 minutes)

Materials: (T) Grid paper (with ability to project or enlarge grid paper)

Note: This fluency activity prepares students for this lesson's Concept Development.

T: (Project grid paper with a rectangle of 5 units by 2 units shaded.) What's the length of the longest side?

S: 5 units.

T: (Write *5 units*. Point to the opposite side.) What's the length of the opposite side?

S: 5 units.

T: (Write *5 units*.) What's the sum of the rectangle's two longest sides?

S: 10 units.

T: What's the length of the shortest side?

S: 2 units.

T: (Write *2 units*. Point to the unknown side.) What's the length of the unknown side?

S: 2 units.

T: (Write *2 units*.) What's the sum of the rectangle's two shortest sides?

S: 4 units.

T: What's the perimeter?

S: 14 units.

T: How many square units are in one row?

S: 5 square units.

T: How many rows of 5 square units are there?

S: 2 rows.

T: Let's find how many square units there are in the rectangle, counting by fives.

S: 5, 10.

T: What's the area?

S: 10 square units.

Repeat the process for 3 × 4 and 7 × 3 rectangles.

Multiply a Number by Itself (5 minutes)

Note: Multiplying a number by itself helps students quickly compute the areas of squares.

T: (Project 1 × 1 = ____.) Say the complete multiplication equation.

S: 1 × 1 = 1.

Repeat the process for 2, 3, 4, 5, 6, 7, 8, 9, and 10.

T: I'm going to call out a number. You say the answer when it's multiplied by itself. 2.

S: 4.

Repeat the process for this possible sequence: 1, 10, 5, 3, 6, 8, 4, 7, and 9.

Group Counting (3 minutes)

Note: Group counting helps review multiples and factors that students need to recall during the lesson.

Direct students to count forward and backward, occasionally changing the direction of the count, using the following sequence: threes to 24, fours to 24, and sixes to 24.

T: Count by threes. Ready? (Use a familiar signal to indicate counting up or counting down.)

S: 3, 6, 9, 12, 9, 12, 9, 12, 15, 18, 21, 18, 21, 18, 21, 24, 21, 18, 21, 18, 15, 12, 9, 12, 9, 6, 3.

Find the Unknown Factor (4 minutes)

Materials: (S) Personal white board

Note: Finding the unknown factor in isolation prepares students to solve *unknown side* problems when given the area.

T: (Project 3 × ____ = 12.) On your personal white boards, write the unknown factor.

S: (Write 4.)

T: Say the multiplication sentence.

S: 3 × 4 = 12.

Repeat the process with the following possible sequence: 4 × ____ = 12, 4 × ____ = 24, 3 × ____ = 24, 6 × ____ = 12, 6 × ____ = 24, and 3 × ____ = 18.

Lesson 1:   Investigate and use the formulas for area and perimeter of rectangles.

EUREKA
MATH™

Concept Development (35 minutes)

Materials: (T) Grid paper (with ability to project or enlarge grid paper), chart paper (S) Grid paper, personal white board

Problem 1: Review and compare perimeter and area of a rectangle.

T: Draw a rectangle on your grid paper that is four units wide and seven units long.

S: (Draw the rectangle on grid paper.)

T: (Monitor to see that students have drawn the rectangle correctly.) Tell your partner what you notice about your rectangle.

S: The opposite sides are the same length. → It has four right angles. → The area of the rectangle is 28 square units. → The perimeter of the rectangle is 22 units.

T: Place the point of your pencil on one of the corners of the rectangle. Now, trace around the outside of the rectangle until you get back to where you started. What do we call the measurement of the distance around a rectangle?

S: The perimeter.

T: Trace the perimeter again. This time, count the units as you trace them. What is the perimeter of the rectangle?

S: 22 units.

T: When we know the measurements of the length and width of a rectangle, is there a quicker way to determine the perimeter than to count the units while tracing?

S: We could add the measurements of all four sides of the rectangle.

T: Take your pencil and count all of the squares within your rectangle. These squares represent the area of the rectangle. How do I find the area of the rectangle?

S: You count the squares. → You can multiply the length times the width of the rectangle. → Four units times 7 units is 28 square units.
Problem 2: Use the formula 2 × (l + w) to solve for perimeter and to find an unknown side length of a rectangle.

T: Draw a rectangle on your graph paper that is 3 units wide and 9 units long. (Draw and display the rectangle.) Watch as I label the length and width of the rectangle. Now, label the length and width of your rectangle. How can I find the perimeter?

S: Add up the lengths of all of the sides. 3 + 9 + 3 + 9 = 24. The perimeter is 24 units. → You could also add 3 + 3 + 9 + 9. The answer is still 24 units. The order doesn't matter when you are adding.

T: Use your pencil to trace along one width and one length. Along how many units did you trace?

EUREKA
MATH™

Lesson 1:   Investigate and use the formulas for area and perimeter of rectangles.   **19**
S: 12 units.

T: How does 12 relate to the length and width of the rectangle?

S: It's the sum of the length and width.

T: How does the sum of the length and width relate to finding the perimeter of the rectangle?

S: It's halfway around. → I can double the length and double the width to find the perimeter instead of adding all the sides ($2l + 2w$). → I could also add the length and the width and double that sum, $2 \times (l + w)$. → Both of those work since the opposite sides are equal.

T: You have just mentioned many **formulas**, like counting along the sides of the rectangle or adding sides or doubling, to find the perimeter. Let's create a chart to keep track of the formulas for finding the perimeter of a rectangle. Talk to your partner about the most efficient way to find the perimeter.

S: If I draw the shape on grid paper, I can just count along the edge. → I am good at adding, so I will add all four sides. → It is faster to double the sum of the length and width. It's only two steps.

T: We can write the formula as $P = 2 \times (l + w)$ on our chart, meaning we add the length and width first and then multiply that sum by 2. What is the length plus width of this rectangle?

S: 3 plus 9 equals 12. 12 units.

T: 12 units doubled, or 12 units times 2, equals …?

S: 24 units.

T: Now, draw a rectangle that is 2 units wide and 4 units long. Find the perimeter by using the formula I just mentioned. Then, solve for the perimeter using a different formula to check your work.

S: 2 + 4 = 6 and 6 × 2 = 12. The perimeter is 12 units. → Another way is to double 2, double 4, and then add the doubles together. 4 plus 8 is 12 units. Both formulas give us the same answer.

Repeat with a rectangle that is 5 units wide and 6 units long.

Instruct students to sketch a rectangle with a width of 5 units and a perimeter of 26 units on their personal white boards, not using graph paper.
T: Label the width as 5 units. Label the length as an unknown of *x* units. How can we determine the length? Discuss your ideas with a partner.

S: If I know that the width is 5, I can label the opposite side as 5 units since they are the same. If the perimeter is 26, I can take away the widths to find the sum of the other two sides. 26 − 10 = 16. If the sum of the remaining two sides is 16, I know that each side must be 8 since I know that they are equal and that 8 + 8 = 16, so $x = 8$ (shows sketch to demonstrate her thinking).

S: We could also find the length another way. I know that if I add the length and the width of the rectangle together, I will get half of the perimeter. In this rectangle, because the perimeter is 26 units, the length plus the width equals 13 units. If the width is 5, that means that the length has to be 8 units because 5 + 8 = 13. → 26 ÷ 2 = 13, $x + 5 = 13$ or $13 − 5 = x$, so $x = 8$.

Repeat for P = 28 cm, *l* = 8 cm.

20   Lesson 1:   Investigate and use the formulas for area and perimeter of rectangles.

EUREKA
MATH™

©2018 Great Minds®. eureka-math.org

Problem 3: Use the area formula (*l* × *w*) to solve for area and to solve for the unknown side length of a rectangle.

T: Look back at the rectangle with the width of 3 units and the length of 9 units. How can we find the area of the rectangle?

S: We can count all of the squares. → We could also count the number of squares in one row and then skip-count that number for all of the rows. → That's just multiplying the number of rows by the number in each row. → A quicker way is to multiply the length times the width. Nine rows of 3 units each is like an array. We can just multiply 9 × 3.

T: Talk to your partner about the most efficient way to find the area of a rectangle.
Discuss how to find the area for the 2 × 4 rectangle and the 5 × 6 rectangle drawn earlier in the lesson. Encourage students to multiply length times width to solve. Ask students to tell how the area of each rectangle needs to be labeled and why.

T: We discussed a formula for finding the perimeter of a rectangle. We just discovered a formula for finding the area of a rectangle. If we use *A* for area, *l* for length, and *w* for width, how could we write the formula?

S: $A = l \times w$.

T: (Sketch a rectangle on the board, and label the area as 50 square centimeters.) If we know that the area of a rectangle is 50 square centimeters and that the length of the rectangle is 10 centimeters, how can we determine the measurement of the width of the rectangle?
S: I can use the area formula. 50 square centimeters is equal to 10 centimeters times the width. 10 times 5 equals 50, so the width is 5 centimeters. → The area formula says 50 = 10 × ____. I can solve that with division! So, 50 square centimeters divided by 10 centimeters is 5 centimeters.

Repeat for *A* = 32 square m, *l* = 8 m and for *A* = 63 square cm, *w* = 7 cm.
Problem 4: Given the area of a rectangle, find all possible whole number combinations of the length and width, and then calculate the perimeter.

T: If a rectangle has an area of 24 square units, what whole numbers could be the length and width of the rectangle? Discuss with your partner.

S: The length is 3 units, and the width is 8 units. → Yes, but the length could also be 4 units and the width 6 units. Or, the other way around: length of 6 units and width of 4 units. → There are many combinations of length and width to make a rectangle with an area of 24 square units.

T: With your partner, draw and complete a table similar to mine until you have found all possible whole number combinations for the length and width.

Circulate, checking to see that students are using the length times width formula to find the dimensions. Complete the table with all combinations as a class.

T: Now, sketch each rectangle, and solve for the perimeter using the perimeter formula.

Circulate, checking to see that students draw rectangles to scale and solve for perimeter using the formula. Check answers as a class.

Problem Set (10 minutes)
Students should do their personal best to complete the Problem Set within the allotted 10 minutes. Some problems do not specify a method for solving. This is an intentional reduction of scaffolding. Students should solve these problems using the RDW approach used for Application Problems.

For some classes, it may be appropriate to modify the assignment by specifying which problems students should work on first. With this option, let the purposeful sequencing of the Problem Set guide your selections so that problems continue to be scaffolded. Balance word problems with other problem types to ensure a range of practice. Consider assigning incomplete problems for homework or at another time during the day.

EUREKA
MATH™

Student Debrief (10 minutes)

Lesson Objective: Investigate and use the formulas for area and perimeter of rectangles.

The Student Debrief is intended to invite reflection and active processing of the total lesson experience.

Invite students to review their solutions for the Problem Set. They should check work by comparing answers with a partner before going over answers as a class. Look for misconceptions or misunderstandings that can be addressed in the Debrief. Guide students in a conversation to debrief the Problem Set and process the lesson.

Any combination of the questions below may be used to lead the discussion.

- What is a **formula** for solving for perimeter? What formula is most efficient?

- Compare the units used to measure perimeter and the units used to measure area (length units and square units).

- What was challenging about solving Problems 6(a) and 6(b)? How did the process of solving Problems 4 and 5 help you to figure out how to solve Problems 6(a) and 6(b)?

- The perimeters of the rectangles in Problems 2(a) and 2(b) are the same. Why are the areas different?

- The areas of the rectangles in Problems 6(a) and 6(b) are the same. Why are the perimeters different?

- How did you find the answer for the length of the unknown side, *x*, in Problems 4(a) and 4(b)?

- What was your strategy for finding the length of the unknown side, *x*, in Problems 5(a) and 5(b)? Discuss with your partner.

- What significant math vocabulary did we use today to communicate precisely?

Lesson 1:   Investigate and use the formulas for area and perimeter of rectangles.

Lesson 2

Objective: Solve multiplicative comparison word problems by applying the area and perimeter formulas.

Suggested Lesson Structure

■ Fluency Practice   (12 minutes)
■ Application Problem   (6 minutes)
▢ Concept Development   (32 minutes)
■ Student Debrief   (10 minutes)
  Total Time   **(60 minutes)**
Fluency Practice (12 minutes)

▪ Multiply a Number by Itself   (2 minutes)
▪ Rename the Unit   (4 minutes)
▪ Find the Area and Perimeter   (6 minutes)

Multiply a Number by Itself (2 minutes)

Materials: (S) Personal white board

Note: Multiplying a number by itself helps students quickly compute the areas of squares.

Repeat the process from Lesson 1, using more choral response.

Rename the Unit (4 minutes)

Materials: (S) Personal white board

Note: Renaming units helps prepare students for Topic B.

  T: (Project 7 tens = _____.) Fill in the blank to make a true number sentence using standard form.
  S: 7 tens = 70.

Repeat the process for 9 tens, 10 tens, 11 tens, and 12 tens.

  T: (Project 17 tens = _____.) Fill in the blank to make a true number sentence using standard form.
  S: (Show 17 tens = 170.)

Repeat with the following possible sequence: 17 hundreds, 17 thousands, 13 tens, 13 hundreds, and 13 thousands.

Lesson 2:   Solve multiplicative comparison word problems by applying the area and perimeter formulas.

EUREKA
MATH™

Find the Area and Perimeter (6 minutes)

Materials: (S) Personal white board

Note: This fluency activity reviews Lesson 1.

> T: (Project a rectangle with a length of 4 cm and a width of 3 cm.) On your personal white boards, write a multiplication sentence to find the area.
>
> S: (Write 4 cm × 3 cm = 12 square cm.)
>
> T: Use the formula for perimeter to solve.
>
> S: (Write 2 × (4 cm + 3 cm) = 14 cm.)

Repeat the process for a rectangle with dimensions of 6 cm × 4 cm.

> T: (Project a square with a length of 2 m.) This is a square. Say the length of each side.
>
> S: 2 meters.
>
> T: On your boards, write a multiplication sentence to find the area.
>
> S: (Write 2 m × 2 m = 4 square m.)
>
> T: Write the perimeter.
>
> S: 2 × (2 m + 2 m) = 8 m.

Repeat the process for squares with lengths of 3 cm and 9 cm.

> T: (Project a rectangle with an area of 12 square cm, length of 2 cm, and *x* for the width.) On your boards, write a division sentence to find the width.
>
> S: (Write 12 square cm ÷ 2 cm = 6 cm.)

Repeat the process for 12 square cm ÷ 4 cm, 18 square cm ÷ 3 cm, and 25 square cm ÷ 5 cm.

Application Problem (6 minutes)

Tommy's dad is teaching him how to make tables out of tiles. Tommy makes a small table that is 3 feet wide and 4 feet long. How many square-foot tiles does he need to cover the top of the table? How many feet of decorative border material will his dad need to cover the edges of the table?
Extension: Tommy's dad is making a table 6 feet wide and 8 feet long. When both tables are placed together, what will their combined area be?

EUREKA
MATH™   **Lesson 2:**   Solve multiplicative comparison word problems by applying the area   **33**
                                    and perimeter formulas.

©2018 Great Minds®. eureka-math.org

Note: This Application Problem bridges back to the Concept Development of Lesson 1, during which students investigated and used the formulas for the area and perimeter of rectangles.
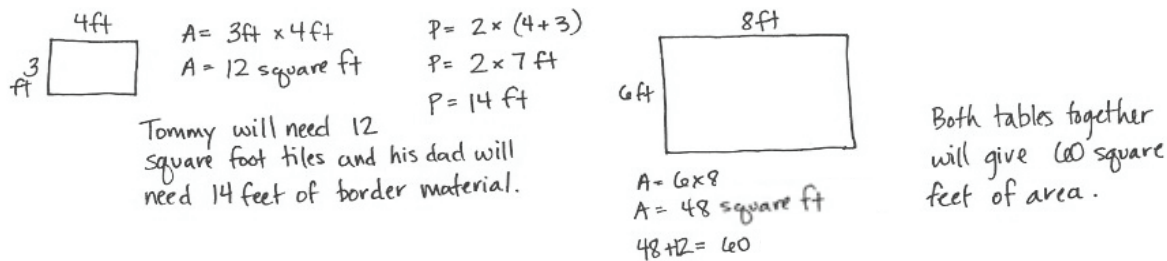

Concept Development (32 minutes)

Materials: (T) Chart of formulas for perimeter and area from Lesson 1 (S) Personal white board, square-inch tiles

Problem 1: A rectangle is 1 inch wide. It is 3 times as long as it is wide. Use square tiles to find its length.

T: Place 3 square-inch tiles on your personal white board. Talk to your partner about what the width and length of this rectangle are.

S: (Discuss.)

T: I heard Alyssa say that the width is 1 inch and the length is 3 inches. Now, make it 2 times as long. (Add 3 more square tiles.) It's now 6 inches long. Three times as long (add 3 more tiles) would be 9 inches. Using the original length of 3 inches, tell your partner how to determine the current length that is three times as many.

S: I multiply the original length times 3. → Three times as long as 3 inches is the same as 3 times 3 inches.

Repeat using tiles to find a rectangle that is 3 inches wide and 3 times as long as it is wide.

34   **Lesson 2:**   Solve multiplicative comparison word problems by applying the area
                                    and perimeter formulas.

                    ©2018 Great Minds®. eureka-math.org

EUREKA
MATH™

$$W = 3in$$
$$L = 3 \times 3in = 9in$$
Problem 2: A rectangle is 2 meters wide. It is 3 times as long as it is wide. Draw to find its length.

T: The rectangle is 2 meters wide. (Draw a vertical line and label it as 2 meters.)

T: It is 3 times as long as it is wide. That means the length can be thought of as three segments, or short lines, each 2 meters long. (Draw the horizontal lines to create a square 2 meters by 2 meters.)

T: Here is the same length, 2 times as long, 3 times as long. (Extend the rectangle as shown.) What is the length when there are 3 segments, each 2 meters long?

S: 6 meters.
T: With your partner, draw this rectangle and label the length and width. What is the length? What is the width?

S: The length is 6 meters, and the width is 2 meters.

T: What is the perimeter? Use the chart of formulas for perimeters from Lesson 1 for reference.

S: Doubling the sum of 6 meters and 2 meters gives us 16 meters.

T: What is the area?

S: 6 meters times 2 meters is 12 square meters.

Repeat with a rectangle that is 3 meters long and 4 times as wide as it is long.

> **NOTES ON MULTIPLE MEANS OF ACTION AND EXPRESSION:**
>
> Ease the task of drawing by offering students the choice of tracing the concrete tiles. Alternatively, reduce the small motor demands by providing a template, grid paper, or computer software for drawing.

EUREKA MATH™

Lesson 2:   Solve multiplicative comparison word problems by applying the area and perimeter formulas.

©2018 Great Minds®. eureka-math.org

35

Problem 3: Solve a multiplicative comparison word problem using the area and perimeter formulas.

Christine painted a mural with an area of 18 square meters and a length of 6 meters. What is the width of her mural? Her next mural will be the same length as the first but 4 times as wide. What is the perimeter of her next mural?

Display the first two statements of the problem.

- T: With your partner, determine the width of the first mural.
- S: The area is 18 square meters. 18 square meters divided by 6 meters is 3 meters. The width is 3 meters.
- T: True. (Display the last two statements of the problem.) Using those dimensions, draw and label Christine's next mural. Begin with the side length you know, 6 meters. How many copies of Christine's first mural will we see in her next mural? Draw them.
- S: Four copies. (Draw.)
- T: Tell me a multiplication sentence to find how wide her next mural will be.
- S: 3 meters times 4 equals 12 meters.
- T: Finish labeling the diagram.
- T: Find the perimeter of Christine's next mural. For help, use the chart of formulas for perimeter that we created during Lesson 1.
- S: 12 meters plus 6 meters is 18 meters. 18 meters doubled is 36 meters. The perimeter is 36 meters.

Problem 4: Observe the relationship of area and perimeter while solving a multiplicative comparison word problem using the area and perimeter formulas.

Sherrie's rectangular garden is 8 square meters. The longer side of the garden is 4 meters. Nancy's garden is twice as long and twice as wide as Sherrie's rectangular garden.

Display the first two statements.

- T: With your partner, draw and label a diagram of Sherrie's garden.
- S: (Draw and label Sherrie's garden.)
- T: What is the width of Sherrie's garden?
- S: Two meters because 8 square meters divided by 4 meters is 2 meters.

NOTES ON MULTIPLE MEANS OF ENGAGEMENT:

English language learners may benefit from frequent checks for understanding as the word problem is read aloud. Explain how the term *square meters* denotes the garden's area. Instead of *twice*, say *two times.* Use gestures and illustrations to clarify the meaning. In addition, after students discover the relationship between area and perimeter, challenge them to explore further. Ask, "If you draw another rectangle with a different length, will a similar doubling of the perimeter and quadrupling of the area result?"

Lesson 2:   Solve multiplicative comparison word problems by applying the area and perimeter formulas.

©2018 Great Minds®. eureka-math.org

EUREKA MATH™

T: (Display the next statement.) Help me draw Nancy's garden. Twice as long as 4 meters is how many meters?

S: 8 meters.

T: Twice as wide as 2 meters is how many meters?

S: 4 meters.

T: Draw Nancy's garden and find the perimeters of both gardens.

S: (Draw and solve to find the perimeters.)

T: Tell your partner the relationship between the two perimeters.

S: Sherrie's garden has a perimeter of 12 meters. Nancy's garden has a perimeter of 24 meters. → The length doubled, and the width doubled, so the perimeter doubled! 12 meters times 2 is 24 meters.
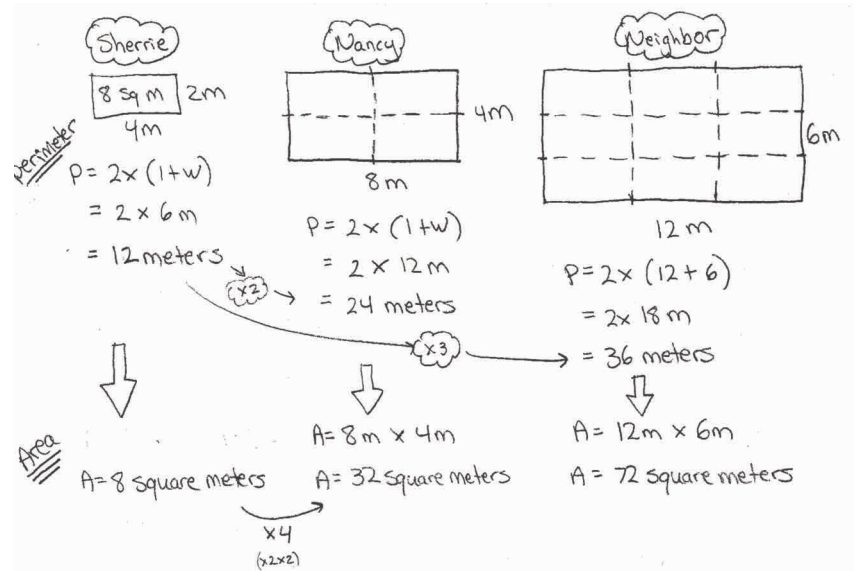

T: If Sherrie's neighbor had a garden 3 times as long and 3 times as wide as her garden, what would be the relationship of the perimeter between those gardens?

S: The perimeter would triple!

T: Solve for the area of Nancy's garden and the neighbor's garden. What do you notice about the relationship among the perimeters and areas of the three gardens?

S: Nancy's garden has an area of 32 square meters. The neighbor's garden has an area of 72 square meters. → The length and width of Nancy's garden is double that of Sherrie's garden, but the area did not double. → The length is doubled and the width is doubled. 2 times 2 is 4, so the area will be 4 times as large. → Right, the area quadrupled! I can put the area of Sherrie's garden inside Nancy's garden 4 times. → The length and width of the neighbor's garden tripled, and 3 times 3 is 9. The area of the neighbor's garden is 9 times that of Sherrie's.

Create a table to show the relationship among the areas and perimeters of the three gardens.

	Sherrie	Nancy	Neighbor
Perimeter	12 m	24 m	36 m
Area	8 sq m	32 sq m	72 sq m

EUREKA MATH™   Lesson 2:   Solve multiplicative comparison word problems by applying the area   37
and perimeter formulas.

Problem Set (10 minutes)

Students should do their personal best to complete the Problem Set within the allotted 10 minutes. For some classes, it may be appropriate to modify the assignment by specifying which problems they work on first. Some problems do not specify a method for solving. Students should solve these problems using the RDW approach used for Application Problems.

Student Debrief (10 minutes)

Lesson Objective: Solve multiplicative comparison word problems by applying the area and perimeter formulas.

The Student Debrief is intended to invite reflection and active processing of the total lesson experience.

Invite students to review their solutions for the Problem Set. They should check work by comparing answers with a partner before going over answers as a class. Look for misconceptions or misunderstandings that can be addressed in the Debrief. Guide students in a conversation to debrief the Problem Set and process the lesson.

Any combination of the questions below may be used to lead the discussion.

- Discuss the relationship between the area of an original rectangle and the area of a different rectangle whose width is 3 times as long as it was to start with.

- Discuss the relationship between the perimeters of the sandboxes in Problem 4.

- For Problem 4(e), why isn't the area twice as much if the length and width are twice as much?

- What conclusion can you make about the areas of two rectangles when the widths are the same but the length of one is twice as much as the length of the other?

- What conclusion can you make about the areas of two rectangles when the length and width of one rectangle are each twice as much as the length and width of the other rectangle?

EUREKA MATH™

- What significant math vocabulary did we use today to communicate precisely?
- How did the Application Problem connect to today's lesson?

Exit Ticket (3 minutes)

After the Student Debrief, instruct students to complete the Exit Ticket. A review of their work will help with assessing students' understanding of the concepts that were presented in today's lesson and planning more effectively for future lessons. The questions may be read aloud to the students.

Lesson 2:   Solve multiplicative comparison word problems by applying the area and perimeter formulas.

Lesson 3

Objective: Demonstrate understanding of area and perimeter formulas by solving multi-step real-world problems.

Suggested Lesson Structure

■ Fluency Practice   (12 minutes)
■ Concept Development   (38 minutes)
■ Student Debrief   (10 minutes)
  Total Time   **(60 minutes)**
Fluency Practice (12 minutes)

▪ Sprint: Squares and Unknown Factors   (8 minutes)
▪ Find the Area and Perimeter   (4 minutes)

Sprint: Squares and Unknown Factors (8 minutes)

Materials: (S) Squares and Unknown Factors Sprint

Note: This Sprint reviews skills that help students as they solve area problems.

Find the Area and Perimeter (4 minutes)

Materials: (S) Personal white board

Note: This activity reviews content from Lessons 1 and 2.

Repeat the process from Lesson 2 for the following possible sequence:

- Rectangles with dimensions of 5 cm × 2 cm, 7 cm × 2 cm, and 4 cm × 7 cm.
- Squares with lengths of 4 cm and 6 m.
- Rectangles with the following properties: area of 8 square cm, length 2 cm, width *x*; area of 15 square cm, length 5 cm, width *x*; and area of 42 square cm, width 6 cm, length *x.*

EUREKA MATH™   Lesson 3:   Demonstrate understanding of area and perimeter formulas by solving   49
                                          multi-step real-world problems.

Concept Development (38 minutes)

Materials: (S) Problem Set

Note: For this lesson, the Problem Set comprises word problems from the Concept Development and should therefore be used during the lesson itself.

Students may work in pairs to solve Problems 1–4 below using the RDW approach to problem solving.

1. Model the problem.

Have two pairs of students who can be successful with modeling the problem work at the board while the others work independently or in pairs at their seats. Review the following questions before beginning the first problem.

- Can you draw something?
- What can you draw?
- What conclusions can you make from your drawing?

As students work, circulate. Reiterate the questions above.

After two minutes, have the two pairs of students share *only* their labeled diagrams.

For about one minute, have the demonstrating students receive and respond to feedback and questions from their peers. Depending on the problem and student work seen while circulating, supplement this component of the process as necessary with direct instruction or clarification.

2. Calculate to solve and write a statement.

Give everyone two minutes to finish work on that question, sharing his work and thinking with a peer. Students should then write their equations and statements of the answer.

3. Assess the solution.

Give students one or two minutes to assess the solutions presented by their peers on the board, comparing the solutions to their own work. Highlight alternative methods to reach the correct solution.

> **NOTES ON MULTIPLE MEANS OF ENGAGEMENT:**
>
> To maximize productivity, choose to make team goals for sustained effort, perseverance, and cooperation. Motivate improvement by providing specific feedback after each problem. Resist feedback that is comparative or competitive. Showcase students who incorporated feedback into their subsequent work.

> **NOTES ON MULTIPLE MEANS OF ENGAGEMENT:**
>
> After the discussion of relationships of perimeter in Lesson 2, challenge students to quickly predict the perimeter of the screen in the auditorium. Have students offer several examples of the multiplicative pattern.

50   Lesson 3:   Demonstrate understanding of area and perimeter formulas by solving
                        multi-step real-world problems.

©2018 Great Minds®. eureka-math.org

EUREKA MATH™

Problem 1

The rectangular projection screen in the school auditorium is 5 times as long and 5 times as wide as the rectangular screen in the library. The screen in the library is 4 feet long with a perimeter of 14 feet. What is the perimeter of the screen in the auditorium?
The structure of this problem and what it demands of students is similar to that found within the first and second lessons of this module. Elicit from students why both the length and the width were multiplied by 5 to find the dimensions of the larger screen. Students use the dimensions to find the perimeter of the larger screen. Look for students to use formulas for perimeter other than 2 × (*l* + *w*) for this problem, such as the formula 2*l* + 2*w*.

Problem 2
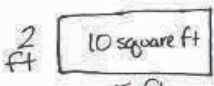

The width of David's rectangular tent is 5 feet. The length is twice the width. David's rectangular air mattress measures 3 feet by 6 feet. If David puts the air mattress in the tent, how many square feet of floor space will be available for the rest of his things?
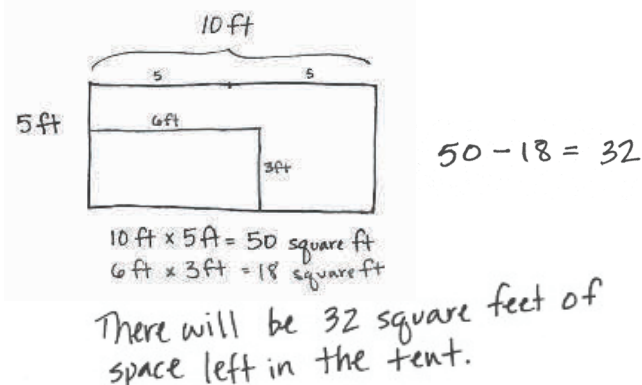

The new complexity here is that students are finding an area within an area and determining the difference between the two. Have students draw and label the larger area first and then draw and label the area of the air mattress inside as shown above. Elicit from students how the remaining area can be found using subtraction.

EUREKA MATH™

Lesson 3:   Demonstrate understanding of area and perimeter formulas by solving multi-step real-world problems.

51

©2018 Great Minds®. eureka-math.org

Problem 3

Jackson's rectangular bedroom has an area of 90 square feet. The area of his bedroom is 9 times that of his rectangular closet. If the closet is 2 feet wide, what is its length?

90 square ft ÷ 9 = 10 square ft

$\frac{2}{ft}$ | 10 square ft |

5 ft

10 square ft ÷ 2 ft = 5 ft
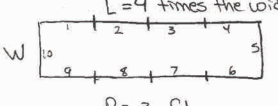

The length of the closet is 5 feet.

This multi-step problem requires students to work backwards, taking the area of Jackson's room and dividing by 9 to find the area of his closet. Students use their learning from the first and second lessons of this module to help solve this problem.

Problem 4

The length of a rectangular deck is 4 times its width. If the deck's perimeter is 30 feet, what is the deck's area?

① L = 4 times the width

W |10   5|
                      P = 30 ft

P = 2 × (l + w)
Width = 1 unit > 5 units
length = 4 units
                P = 2 × 5
P = 10 units
10 × a = 30 feet
   a = 3 feet per unit
W = 3 ft

② W = 3 ft
   L = 12 ft

A = 12 ft × 3 ft
A = 36 square feet

The width is 1 unit.
The length is 4 units
So the perimeter is easy!
10 units or 30 feet
30 ft ÷ 10 = 3 ft.
The width is 3 ft!

That makes the area easy!
3 ft × 4 gives the length, 12 ft
12 ft × 3 ft = 36 square feet.
That's the area!

Students need to use what they know about multiplicative comparison and perimeter to find the dimensions of the deck. Students find this rectangle has 10 equal-size lengths around its perimeter. Teachers can support students who are struggling by using square tiles to model the rectangular deck. Emphasize finding the number of units around the perimeter of the rectangle. Once the width is determined, students are able to solve for the area of the deck. If students have solved using square tiles, encourage them to follow up by drawing a picture of the square tile representation. This allows students to bridge the gap between the concrete and pictorial stages.

Lesson 3:   Demonstrate understanding of area and perimeter formulas by solving
                          multi-step real-world problems.

                                                                                    **EUREKA
                                                                                    MATH**™

Problem Set

Please note that the Problem Set for Lesson 3 comprises this lesson's problems, as stated in the introduction of the lesson.

Student Debrief (10 minutes)

Lesson Objective: Demonstrate understanding of area and perimeter formulas by solving multi-step real-world problems.

The Student Debrief is intended to invite reflection and active processing of the total lesson experience.

Invite students to review their solutions for the Problem Set. They should check work by comparing answers with a partner before going over answers as a class. Look for misconceptions or misunderstandings that can be addressed in the Debrief. Guide students in a conversation to debrief the Problem Set and process the lesson.

Any combination of the questions below may be used to lead the discussion.

- What simplifying strategies did you use to multiply to find the perimeter in Problem 1?
- Can David fit another air mattress of the same size in his tent? (Guide students to see that while there is sufficient area remaining, the dimensions of the air mattress and remaining area of the tent would prevent it from fitting.)
- How was solving Problem 3 different from other problems we have solved using multiplicative comparison?
- Explain how you used the figure you drew for Problem 4 to find a solution.
- When do we use *twice as much*, *2 times as many,* or *3 times as many?* When have you heard that language being used?

4 GRADE

Mathematics Curriculum

Topic B
Multiplication by 10, 100, and 1,000

Focus Standard:	■	Multiply a whole number of up to four digits by a one-digit whole number, and multiply two two-digit numbers, using strategies based on place value and the properties of operations. Illustrate and explain the calculation by using equations, rectangular arrays, and/or area models.
Instructional Days:	3	
Coherence -Links from:	G3–M1	Properties of Multiplication and Division and Problem Solving with Units of 2–5 and 10
-Links to:	G5–M1	Place Value and Decimal Fractions

In Topic B, students examine multiplication patterns when multiplying by 10, 100, and 1,000. Reasoning between arrays and written numerical work allows students to see the role of place value units in multiplication (as pictured below). Students also practice the language of units to prepare them for multiplication of a single-digit factor by a factor with up to four digits. Teachers also continue using the phrase "____ is ____ times as much as ____" (e.g., 120 is 3 times as much as 40). This carries forward multiplicative comparison from Topic A, in the context of area, to Topic B, in the context of both calculations and word problems.
In preparation for two-digit by two-digit multiplication, students practice the new complexity of multiplying two two-digit multiples of 10. For example, students have multiplied 20 by 10 on the place value chart and know that it shifts the value one place to the left, $10 \times 20 = 200$. To multiply 20 by 30, the associative property allows for simply tripling the product, $3 \times (10 \times 20)$, or multiplying the units, 3 tens × 2 tens = 6 hundreds (alternatively, $(3 \times 10) \times (2 \times 10) = (3 \times 2) \times (10 \times 10)$).

$$3 \times (10 \times 20) = 600$$

EUREKA MATH™
Introducing this early in the module allows students to practice this multiplication during fluency activities so that by the time it is embedded within the two-digit by two-digit multiplication in Topic H, both understanding and procedural fluency have been developed.

In Lesson 4, students interpret and represent patterns when multiplying by 10, 100, and 1,000 in arrays and numerically. Next, in Lesson 5, students draw disks to multiply single-digit numbers by multiples of 10, 100, and 1,000. Finally, in Lesson 6, students use disks to multiply two-digit multiples of 10 by two-digit multiples of 10 with the area model.
| A Teaching Sequence Toward Mastery of Multiplication by 10, 100, and 1,000 |
| --- |

Objective 1: Interpret and represent patterns when multiplying by 10, 100, and 1,000 in arrays and numerically.
(Lesson 4)

Objective 2: Multiply multiples of 10, 100, and 1,000 by single digits, recognizing patterns.
(Lesson 5)

Objective 3: Multiply two-digit multiples of 10 by two-digit multiples of 10 with the area model.
(Lesson 6)

Lesson 4

Objective: Interpret and represent patterns when multiplying by 10, 100, and 1,000 in arrays and numerically.

Suggested Lesson Structure

■ Fluency Practice   (12 minutes)
■ Application Problem   (4 minutes)
■ Concept Development   (34 minutes)
■ Student Debrief   (10 minutes)

  Total Time   **(60 minutes)**
Fluency Practice (12 minutes)

■ Rename the Unit   (3 minutes)
■ Group Count by Multiples of 10 and 100   (5 minutes)
■ Find the Area and Perimeter   (4 minutes)

Rename the Unit (3 minutes)

Materials: (S) Personal white board

Note: Renaming units helps prepare students for the next fluency activity and for this lesson's content.

Repeat the process from Lesson 2 using the following suggested sequence: 8 tens, 9 tens, 11 tens, 14 tens, 14 hundreds, 14 thousands, 18 tens, 28 tens, 28 hundreds, and 28 thousands.

Group Count by Multiples of 10 and 100 (5 minutes)

Note: Changing units helps prepare students to recognize patterns of place value in multiplication.

    T: Count by threes to 30.
    S: 3, 6, 9, 12, 15, 18, 21, 24, 27, 30.
    T: Now, count by 3 tens. When I raise my hand, stop counting.
    S: 3 tens, 6 tens, 9 tens.
    T: (Raise hand.) Say the number.
    S: 90.

64   Lesson 4:   Interpret and represent patterns when multiplying by 10, 100, and 1,000 in arrays and numerically.

©2018 Great Minds®. eureka-math.org

EUREKA MATH™

T: Continue.

S: 12 tens, 15 tens.

T: (Raise hand.) Say the number.

S: 150.

Repeat the process for 21 tens, 27 tens, and 30 tens.

Repeat the process, counting by 4 hundreds, stopping to convert at 12 hundreds, 20 hundreds, 32 hundreds, and 40 hundreds.

Repeat the process, counting by 6 hundreds, stopping to convert at 18 hundreds, 30 hundreds, 48 hundreds, and 60 hundreds.

Find the Area and Perimeter (4 minutes)

Materials: (S) Personal white board
Note: This activity reviews content from Lessons 1 and 2.

Repeat the process from Lesson 2 for the following possible suggestions:

- Rectangles with dimensions of 9 cm × 2 cm, 7 cm × 5 cm, and 3 cm × 8 cm.
- Squares with lengths of 7 cm and 8 m.
- Rectangles with the following properties: area of 10 square cm, length 2 cm, and width x; area of 35 square cm, length 5 cm, and width x; and area of 54 square m, width of 6 m, and length x.

Application Problem (4 minutes)

Samantha received an allowance of $3 every week. By babysitting, she earned an additional $30 every week. How much money did Samantha have in four weeks, combining her allowance and her babysitting?

Note: The multiplication of two-digit multiples of 10 by single-digit numbers is Grade 3 content. The second step of this problem relates to today's Concept Development. Students may solve it one way here and may find a simplifying strategy to solve after the lesson has been completed.

EUREKA MATH™   **Lesson 4:**   Interpret and represent patterns when multiplying by 10, 100, and   **65**
                                              1,000 in arrays and numerically.

                                    ©2018 Great Minds®. eureka-math.org

Concept Development (34 minutes)

Materials: (T) Thousands place value chart (Template)
(S) Personal white board, thousands place value chart
(Template)

**Problem 1: Draw place value disks to represent products when multiplying by a one-digit number.**
T: (Draw 3 ones on the place value chart.) How many do you see?

S: 3 ones.

T: How many groups of 3 ones do you see?

S: Just 1.

T: (Write *3 ones × 1*.) Suppose I wanted to multiply 3 ones by ten instead. (Underneath, write *3 ones × 10*.) How would I do that?

S: We can just move each disk over to the tens place and get 3 tens.

T: (Draw an arrow indicating that the disks shift one place to the left, label it *× 10* and write *3 ones × 10 = 3 tens*.) What if I wanted to multiply that by 10?

S: Do the same thing. Move them one more place into the hundreds and get 3 hundreds.

T: (Repeat the procedure on the place value chart, but now write *3 ones × 10 × 10 = 3 hundreds*.) Look at my equation. I started with 3 ones. What did I multiply 3 ones by to get 3 hundreds? Turn and talk.

S: We multiplied by 10 and then multiplied by 10 again. → We multiplied by 10 × 10, but that's really 100. → I can group the 10 × 10, so this is really 3 × (10 × 10). That's just 3 × 100.

T: Work with your partner. How can you solve 3 × 1,000?

S: I showed 3 times 1,000 by showing 3 ones × 10 to get 3 tens. Then, I did times 10 again to get 3 hundreds and times 10 again to show 3 thousands. → I drew an arrow representing *times 1,000* from 3 ones to the thousands column.

T: What is 3 × 10 × 10 × 10 or 3 × 1,000?

S: 3,000.

Repeat with 4 × 10, 4 × 100, and 4 × 1,000.

Lesson 4:   Interpret and represent patterns when multiplying by 10, 100, and
1,000 in arrays and numerically.

©2018 Great Minds®. eureka-math.org

EUREKA MATH™

Problem 2: Draw place value disks to represent products when multiplying by a two-digit number.

Display 15 × 10 on the board.

- T: Draw place value disks to represent 15, and then show 15 × 10. Explain what you did.
- S: I drew an arrow to the next column. → I drew an arrow to show *times 10* for the 1 ten and also for the 5 ones.
- T: Right. We need to show *times 10* for each of our units.
- T: What is 1 ten × 10?
- S: 1 hundred.
- T: What is 5 ones × 10?
- S: 5 tens.
- T: 15 × 10 equals?
- S: 150.

Display 22 × 100 on the board.

- T: With your partner, represent 22 × 100 using place value disks. What did you draw?
- S: I drew 2 tens and 2 ones and showed times 10. Then, I did times 10 again. → I drew 2 tens and 2 ones and showed times 100 by moving two place values to the left.
- T: How can we express your solution strategies as multiplication sentences?
- S: 22 × 10 × 10. → 22 × 100.
- T: What is 22 × 100?
- S: 2,200.
Problem 3: Decomposing multiples of 10 before multiplying.

Display 4 × 20 on the board.

- T: Just like 3 × 100 can be expressed as 3 × 10 × 10, there are different ways to show 4 × 20 to help us multiply. What is another way that I could express 4 × 20?
- S: 4 × 2 tens. → 4 × 2 × 10. → 8 × 10.
- T: Discuss with your partner which of these methods would be most helpful to you to solve 4 × 20.

Allow one minute to discuss.

- S: 4 × 2 tens is the most helpful for me, because I know 4 × 2. → 4 × 2 × 10 is the most helpful because it is similar to 4 × 2 tens. I can do 4 × 2 first, which I know is 8. Then, I can do 8 times 10, which I know is 80.
- T: When multiplying with multiples of 10, you can decompose a factor to help you solve. In this example, we expressed 4 × 20 as (4 × 2) × 10.

Display 6 × 400 on the board.

EUREKA MATH™   Lesson 4:   Interpret and represent patterns when multiplying by 10, 100, and   67
                                                  1,000 in arrays and numerically.

©2018 Great Minds®. eureka-math.org
T: With your partner, solve 6 × 400. Use a simplifying strategy so that you are multiplying by 10, 100, or 1,000.

Allow one minute to work. Have students share their decomposition and simplifying strategies.

S: 6 × 4 hundreds. → (6 × 4) × 100. → 24 × 100.

T: Using the expression of your choice, solve for 6 × 400.

S: 6 × 400 is 24 hundreds or 2,400.

Display 4 × 500 on the board.

T: Use a simplifying strategy to solve 4 × 500.

Allow one minute to work. Have students share their decomposition and simplifying strategies.

S: 4 × 5 hundreds. → (4 × 5) × 100. → 20 × 100. → (2 × 10) × 100. → 2 × 10 × 100. → 2 × 1,000.

T: Using the expression of your choice, solve for 4 × 500.

S: 4 × 500 is 2 thousands or 20 hundreds or 2,000.

> **NOTES ON MULTIPLE MEANS OF ENGAGEMENT:**
>
> Invite students to compose a chart listing all basic facts whose products are multiples of 10 (such as 4 × 5). Encourage students to search for patterns and relationships as they decompose these facts.
>
> For example:
>
> 4 × 500 = (2 × 10) × 100
>
> 6 × 500 = (3 × 10) × 100
>
> 8 × 500 = (4 × 10) × 100

Problem Set (10 minutes)

Students should do their personal best to complete the Problem Set within the allotted 10 minutes. For some classes, it may be appropriate to modify the assignment by specifying which problems they work on first. Some problems do not specify a method for solving. Students should solve these problems using the RDW approach used for Application Problems.

Student Debrief (10 minutes)

Objective: Interpret and represent patterns when multiplying by 10, 100, and 1,000 both in arrays and numerically.

The Student Debrief is intended to invite reflection and active processing of the total lesson experience.

Invite students to review their solutions for the Problem Set. They should check work by comparing answers with a partner before going over answers as a class. Look for misconceptions or misunderstandings that can be addressed in the Debrief. Guide students in a conversation to debrief the Problem Set and process the lesson.

68   Lesson 4:   Interpret and represent patterns when multiplying by 10, 100, and 1,000 in arrays and numerically.

©2018 Great Minds®. eureka-math.org

EUREKA MATH™

Any combination of the questions below may be used to lead the discussion.

- What is the difference between saying *10 more* and *10 times as many?*

- What is another expression that has the same value as 10 × 800 and 1,000 × 8?

- Think about the problems we solved during the lesson and the problems you solved in the Problem Set. When does the number of zeros in the factors not equal the number of zeros in the product?

- For Problem 4, 12 × 10 = 120, discuss with your partner whether or not this equation is true: 12 × 10 = 3 × 40. (Problem 7 features 3 × 40.)

- How did the Application Problem connect to today's lesson?

Exit Ticket (3 minutes)

After the Student Debrief, instruct students to complete the Exit Ticket. A review of their work will help with assessing students' understanding of the concepts that were presented in today's lesson and planning more effectively for future lessons. The questions may be read aloud to the students.

Lesson 4: Interpret and represent patterns when multiplying by 10, 100, and 1,000 in arrays and numerically.

75

EUREKA
MATH™
Lesson 5

Objective: Multiply multiples of 10, 100, and 1,000 by single digits, recognizing patterns.

Suggested Lesson Structure

- ■ Fluency Practice   (8 minutes)
- ■ Concept Development   (42 minutes)
- ■ Student Debrief   (10 minutes)
- **Total Time**   **(60 minutes)**

Fluency Practice (8 minutes)

- ▪ Group Count by Multiples of 10 and 100   (4 minutes)
- ▪ Multiply Units   (4 minutes)

Group Count by Multiples of 10 and 100 (4 minutes)

Note: Changing units helps to prepare students to recognize patterns of place value in multiplication.

Repeat the process from Lesson 4 using the following suggested sequence:

- ▪ Sevens, stopping to convert at 14 tens, 35 tens, 63 tens, and 70 tens.
- ▪ Eights, stopping to convert at 24 hundreds, 40 hundreds, 64 hundreds, and 80 hundreds.
- ▪ Nines, stopping to convert at 27 hundreds, 45 hundreds, 63 hundreds, and 90 hundreds.

Multiply Units (4 minutes)

Materials: (S) Personal white board

Note: This fluency activity gives students practice reviewing content from Lesson 4.

- T: (Write $3 \times 2 = $ ____.) Say the multiplication sentence in unit form.
- S: 3 ones × 2 = 6 ones.
- T: On your personal white boards, write the answer in standard form.
- S: (Write 6.)
- T: (Write $30 \times 2 = $ ____.) Say the multiplication sentence in unit form.
- S: 3 tens × 2 = 6 tens.
- T: Write the answer in standard form.
- S: (Write 60.)

Repeat for the following possible sequence: 3 hundreds × 2, 3 thousands × 2, 5 ones × 3, 5 tens × 3, 5 thousands × 3, 5 thousands × 4, 5 tens × 4, 5 ones × 8, 5 hundreds × 8, and 9 tens × 7.

Lesson 5:   Multiply multiples of 10, 100, and 1,000 by single digits, recognizing patterns.

©2018 Great Minds®. eureka-math.org

EUREKA MATH™

Concept Development (42 minutes)

Materials: (T) Thousands place value chart (Lesson 4 Template)
(S) Personal white board, thousands place value chart
(Lesson 4 Template)

Problem 1: Use place value disks to represent multiplication patterns.

Write the following on the board:

2 ones × 4   2 tens × 4   2 hundreds × 4   2 thousands × 4

- T: Show 2 ones × 4 on your place value chart. Circle each group of 2 ones.
- T: Show 2 tens × 4 on your place value chart. Circle each group of 2 tens.
- T: 2 ones × 4 is…?
- S: 8 ones.
- T: 2 tens × 4 is…?
- S: 8 tens. → 80.
- T: With your partner, represent 2 hundreds × 4. Circle each group of 2 hundreds.
- T: (Allow about one minute.) What did you notice about multiplying 2 hundreds × 4 compared to 2 tens × 4?
- S: There was the same number of place value disks.
  → It was almost the same, except I used disks that represented 1 hundred instead of 10. → The value of the disks is in the hundreds, so my answer is larger.
- T: 2 hundreds × 4 is …?
- S: 8 hundreds. → 800.
- T: What do you think would happen if we multiplied 2 thousands × 4?
- S: It would look the same again! But, instead of disks representing 100, we would use disks representing 1,000. → The answer would be 8 thousands because we multiplied 2 times 4 in the thousands column.

Repeat with 30 × 3, 300 × 3, and 3,000 × 3.

NOTES ON MULTIPLE MEANS OF ACTION AND EXPRESSION:

Learners differ in their physical abilities. Provide alternatives to drawing place value disks, such as placing cubes or concrete disks or indicating their selection. In addition, use color to highlight the movement of the array from the ones, to the tens, to the hundreds place.

Problem 2: Numerically represent single-digit numbers times a multiple of 10.

Display 8 × 2, 8 × 20, 8 × 200, and 8 × 2,000 horizontally on the board.

- T: With your partner, solve these multiplication problems in unit form.

Allow students two minutes to work in pairs.

T: What patterns do you notice?

S: All of the problems have 8 as a factor. → The units are in order of the place value chart, smallest to largest. → The unit we multiply is the same unit we get in our answer, like 8 × 2 tens equals 16 tens and 8 × 2 hundreds is 16 hundreds.

8×2 ones = 16 ones
8×2 tens = 16 tens
8×2 hundreds = 16 hundreds
8×2 thousands = 16 thousands

T: What happens if we change the unit from 8 × 2 hundreds to 8 hundreds × 2? Does the answer change?

S: Nothing happens. → The answer stays the same even though the unit changed. → 8 × 2 hundreds can be written as 8 × (2 × 100), and 8 hundreds × 2 can be written as (8 × 100) × 2. Both statements are equivalent.

8 × 2 hundreds

8 hundreds × 2

Repeat with 5 × 2, 5 × 20, 5 × 200, and 5 × 2,000 horizontally on the board. As students begin to recognize the pattern of zeros as they multiply by multiples of 10, note the complexity in the additional zero when multiplying 5 times 2.

Problem 3: Solve a word problem by finding the sum of two different products of a single-digit number by a two- and three-digit multiple of 10.

1. Francisco played a video game and earned 60 points for every coin he collected. He collected 7 coins. How many points did he earn for the coins that he collected?

2. Francisco also earned 200 points for every level he completed in the game. He completed 7 levels. How many points did he earn for the levels that he completed?

3. What was the total number of points that Francisco earned?

Introduce each step of the problem separately, instructing students to follow the RDW process. Students should ask themselves what they know and draw a tape diagram as needed before solving. Encourage students to show how they decompose each multiplication problem and promote simplifying strategies for the addition.

NOTES ON
MULTIPLE MEANS
OF ACTION AND
EXPRESSION:

Teach English language learners and others to track information from the word problem as notes or as a model as they read sentence by sentence.

$= 7 \times 60$
$= 7 \times 6 \times 10$
$= 42 \times 10$
$= 420$
Francisco earned 420 points for the coins he collected.

$= 7 \times 200$
$= 7 \times 2 \times 100$
$= 14 \times 100$
$= 1,400$
Francisco earned 1400 points for the levels he completed.

$\begin{array}{r} 1400 \\ + 420 \\ \hline 1,820 \end{array}$

Francisco earned a total of 1,820 points.

EUREKA MATH

Problem 4: Solve a word problem involving *1,000 times as many.*

At a concert, there were 5,000 people in the audience. That was 1,000 times the number of performers. How many performers were at the concert?

T: Write an equation to solve for how many performers were at the concert. Solve using a method of your choice.

S: I know 1,000 times the number of performers is 5,000, so to solve the equation of $p \times 1,000 = 5,000$, I know that there were 5 performers. → There are 1,000 times as many people in the audience, so I can divide 5,000 by 1,000 to find 5 performers.

Problem Set (10 minutes)

Students should do their personal best to complete the Problem Set within the allotted 10 minutes. For some classes, it may be appropriate to modify the assignment by specifying which problems they work on first. Some problems do not specify a method for solving. Students should solve these problems using the RDW approach used for Application Problems.

Student Debrief (10 minutes)

Lesson Objective: Multiply multiples of 10, 100, and 1,000 by single digits, recognizing patterns.

The Student Debrief is intended to invite reflection and active processing of the total lesson experience.

Invite students to review their solutions for the Problem Set. They should check work by comparing answers with a partner before going over answers as a class. Look for misconceptions or misunderstandings that can be addressed in the Debrief. Guide students in a conversation to debrief the Problem Set and process the lesson.

Any combination of the questions below may be used to lead the discussion.

▪ What pattern did you notice while solving Problems 1, 2, and 3?

▪ Sometimes, we decompose using addition, such as saying 30 = 10 + 10 + 10, and sometimes we decompose using multiplication, such as saying 30 = 3 × 10. What are some possible decompositions of 24 using addition? Multiplication?

▪ What did you notice about 5 × 2, 5 × 20, 5 × 200, and 5 × 2,000? (Note: Try to elicit that there is a "hidden" or "extra" zero because 5 × 2 ones is 1 ten, 5 × 2 tens is 10 tens, etc.)

EUREKA MATH™

Lesson 5:   Multiply multiples of 10, 100, and 1,000 by single digits, recognizing patterns.

79

Lesson 6

Objective: Multiply two-digit multiples of 10 by two-digit multiples of 10 with the area model.

Suggested Lesson Structure

- ■ Fluency Practice   (12 minutes)
- ■ Application Problem   (5 minutes)
- ■ Concept Development   (33 minutes)
- ■ Student Debrief   (10 minutes)
  Total Time   **(60 minutes)**
Fluency Practice (12 minutes)

- ▪ Multiply by Different Units   (4 minutes)
- ▪ Take Out the 10, 100, or 1,000   (2 minutes)
- ▪ Multiply by Multiples of 10, 100, and 1,000   (6 minutes)

Multiply by Different Units (4 minutes)

Note: This activity reviews concepts practiced in Lesson 5.

> T: (Write $3 \times 2 = $ ____.) Say the multiplication sentence in unit form.
> S: 3 ones × 2 = 6 ones.

Repeat for the following possible sequence: 30 × 2, 300 × 2, 3,000 × 2, 3,000 × 3, 30 × 3, 300 × 5, 70 × 5, 400 × 8, 40 × 5, and 800 × 5.

Take Out the 10, 100, or 1,000 (2 minutes)

Note: This activity helps prepare students to multiply by multiples of 10, 100, or 1,000.

> T: I'll say a number. I want you to restate the number as a multiplication sentence, taking out the 10, 100, or 1,000. Ready. 20.
> S: 2 × 10.
> T: 200.
> S: 2 × 100.
> T: 2,000.
> S: 2 × 1,000.

Repeat the process for the following possible sequence: 5,000, 30, 700, 8,000, and 90.

Lesson 6:   Multiply two-digit multiples of 10 by two-digit multiples of 10 with the
              area model.

EUREKA
MATH™

Multiply by Multiples of 10, 100, and 1,000 (6 minutes)

Materials: (S) Personal white board

Note: This activity reviews concepts practiced in Lesson 5.

- T: (Write 5 × 300.) Say the multiplication expression.
- S: 5 × 300.
- T: Rewrite the multiplication sentence, taking out the 100, and solve.
- S: (Write 5 × 3 × 100 = 1,500.)

Repeat the process for the following possible sequence: 70 × 3, 8 × 4,000, 6 × 200, and 50 × 8.

Application Problem (5 minutes)

There are 400 children at Park Elementary School. Park High School has 4 times as many students.

a.   How many students in all attend both schools?

b.   Lane High School has 5 times as many students as Park Elementary. How many more students attend Lane High School than Park High School?
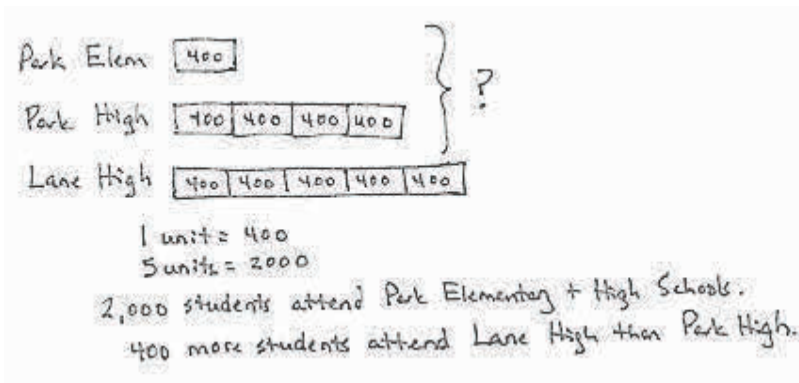

Note: These problems are a review of work from Lesson 5.

> **NOTES ON MULTIPLE MEANS OF ENGAGEMENT:**
>
> Differentiate the difficulty of the Application Problem by adjusting the numbers. Extend for students working above grade level with these open-ended questions:
>
> - How many students would you predict attend the middle school? Explain your reasoning.
> - If these were estimates of the number of students, what might be the actual numbers?

EUREKA MATH™

Lesson 6:   Multiply two-digit multiples of 10 by two-digit multiples of 10 with the area model.

©2018 Great Minds®. eureka-math.org

89

Concept Development (33 minutes)

Materials: (T) Thousands place value chart (Lesson 4 Template) (S) Personal white board, thousands place value chart (Lesson 4 Template)

Problem 1: Use the place value chart to multiply a two-digit multiple of 10 by a two-digit multiple of 10.

Display 30 × 20 on the board.

> T: Here we are multiplying a two-digit number by another two-digit number. What are some other ways we could express 30 × 20?
>
> S: 3 tens × 2 tens.
>
>   10 × 20 × 3.
>
>   10 × 30 × 2.
>
>   2 × 30 × 10.
>
>   3 × 20 × 10.
>
> T: Let's use 10 × 20 × 3 in a place value chart to help us solve 30 × 20. (Project place value chart as shown to the right.)
>
> T: What is 2 tens times 10?
>
> S: 2 tens times 10 is 2 hundreds.
>
> T: So, the value of 10 × 20 is …?
>
> S: 200.
>
> T: And, then 200 × 3?
>
> S: Triple that group. → 200 times 3. → 3 times 2 hundreds. → 3 groups of 2 hundred.
>
> T: 10 × 20 × 3 is …?
>
> S: 600.
>
> T: With your partner, represent one of the following on your place value chart:
>
>   10 × 30 × 2 as 10 groups of 30 times 2.
>
>   2 × 30 × 10 as 2 groups of 30 times 10.
>
>   3 × 20 × 10 as 3 groups of 20 times 10.

Allow students two minutes to work.

> T: Did you get the same answer?
>
> S: Yes, we got 6 hundreds again.
>
> T: When we multiply a two-digit number by another two-digit number, there are many equivalent ways to express it as a product. Decomposing our multiplication problem into more units can help us solve.

Lesson 6:   Multiply two-digit multiples of 10 by two-digit multiples of 10 with the area model.

EUREKA MATH™

©2018 Great Minds®. eureka-math.org

Problem 2: Create an area model to represent the multiplication of a two-digit multiple of 10 by a two-digit multiple of 10.

T: (Display 40 × 20.) Let's model 40 × 20 as an area. Tell your partner what 40 × 20 is.

S: 4 tens times 20. That's 80 tens, or 800.

T: (Record student statement.) What is 20 in unit form?

S: 2 tens.

T: So, then, what is 4 tens times 2 tens?

S: I know 4 times 2 is 8. I don't know what to do with the units. → I know 4 times 2 is 8. That leaves both tens. 10 tens. It's like saying 4 times 2 times 10 tens!

T: Let's prove how we can multiply the units. Draw a 40 by 20 rectangle on your personal white board. Partition the horizontal side into 2 tens and the vertical side into 4 tens. Label each side. What is the area of one square? (Point to a 10 by 10 square.)

S: 10 × 10 = 100.

T: Say a multiplication sentence for how many of the squares there are.

S: 4 × 2 = 8.

T: Tell your partner how this rectangle shows 4 tens times 2 tens equals 8 hundreds.

S: Each square is 10 by 10. That makes 100. There are 8 hundreds.
Problem 3: Use an area model to represent the multiplication of a two-digit multiple of 10 by a two-digit multiple of 10.

Display 50 × 40 horizontally on the board.

T: Name 50 × 40 in unit form.

S: 5 tens × 4 tens.

T: With your partner, draw a rectangle to represent 5 tens times 4 tens.

S: I can draw the vertical side as 5 tens and the horizontal side as 4 tens. 10 times 10 is 100. 5 times 4 is 20. 20 is the same as 2 tens. 2 tens times 100 is 2,000.

T: Use a place value chart to prove 2 tens times 100 is 2,000.
Students draw a place value chart.

T: What is 50 × 40?

S: 2,000.

T: What conclusion can be made about multiplying a unit of 10 times a unit of 10?

S: 10 times 10 is always 100. So, I can decompose any unit of 10, multiply how many units of 10 there are, and it will be that many hundreds. 7 tens times 8 tens is 56 of some unit. I just have to find the unit. Ten times ten is 100. So, it's 56 hundreds or 5,600.

Repeat with 60 × 30.

EUREKA
MATH™

Lesson 6:   Multiply two-digit multiples of 10 by two-digit multiples of 10 with the area model.

91

Problem Set (10 minutes)

Students should do their personal best to complete the Problem Set within the allotted 10 minutes. For some classes, it may be appropriate to modify the assignment by specifying which problems they work on first. Some problems do not specify a method for solving. Students should solve these problems using the RDW approach used for Application Problems.

Student Debrief (10 minutes)

Lesson Objective: Multiply two-digit multiples of 10 by two-digit multiples of 10 with the area model.

The Student Debrief is intended to invite reflection and active processing of the total lesson experience.

Invite students to review their solutions for the Problem Set. They should check work by comparing answers with a partner before going over answers as a class. Look for misconceptions or misunderstandings that can be addressed in the Debrief. Guide students in a conversation to debrief the Problem Set and process the lesson.

Any combination of the questions below may be used to lead the discussion.

- What patterns did you notice while solving Problem 1?
- Explain to your partner how to solve the problem 80 × 50 from Problem 10. What does the answer have to do with thousands when the units in 80 and 50 are 8 tens and 5 tens?
- To solve 4 × 10 × 2 × 10, you can multiply 4 × 2 to get 8, then multiply 10 × 10 to get 100, then multiply the 8 times 100. Is it always possible to rearrange numbers like this when multiplying?
- Talk to your partner about how you solved Problem 2. Can you come up with a different way to solve this problem?

Lesson 6: Multiply two-digit multiples of 10 by two-digit multiples of 10 with the area model.

Topic C

Multiplication of up to Four Digits by Single-Digit Numbers

Focus Standard:	■	Multiply a whole number of up to four digits by a one-digit whole number, and multiply two two-digit numbers, using strategies based on place value and the properties of operations. Illustrate and explain the calculation by using equations, rectangular arrays, and/or area models.		
Instructional Days:	5			
Coherence -Links from:		G3–M1	Properties of Multiplication and Division and Problem Solving with Units of 2–5 and 10	
		G3–M3	Multiplication and Division with Units of 0, 1, 6–9, and Multiples of 10	
-Links to:		G5–M2	Multi-Digit Whole Number and Decimal Fraction Operations	

Building on their work in Topic B, students begin in Topic C decomposing numbers into base ten units in order to find products of single-digit by multi-digit numbers. Students practice multiplying by using models before being introduced to the standard algorithm. Throughout the topic, students practice multiplication in the context of word problems, including multiplicative comparison problems.

In Lessons 7 and 8, students use place value disks to represent the multiplication of two-, three-, and four-digit numbers by a one-digit whole number.
Lessons 9 and 10 move students to the abstract level as they multiply three- and four-digit numbers by one-digit numbers using the standard algorithm.

Finally, in Lesson 11, partial products, the standard algorithm, and the area model are compared and connected via the distributive property.
These calculations are then contextualized within multiplicative comparison word problems.

Jackson's younger brother, Sam, ran 1,423 meters. Jackson ran 3 times as far as Sam. How far did Jackson run?
A Teaching Sequence Toward Mastery of Multiplication of Up to Four Digits by Single-Digit Numbers
Objective 1: Use place value disks to represent two-digit by one-digit multiplication. (Lesson 7)
Objective 2: Extend the use of place value disks to represent three- and four-digit by one-digit multiplication. (Lesson 8)
Objective 3: Multiply three- and four-digit numbers by one-digit numbers applying the standard algorithm. (Lessons 9–10)
Objective 4: Connect the area model and the partial products method to the standard algorithm. (Lesson 11)

EUREKA MATH™

Lesson 7

Objective: Use place value disks to represent two-digit by one-digit multiplication.

Suggested Lesson Structure

■ Fluency Practice   (12 minutes)
■ Application Problem   (10 minutes)
■ Concept Development   (28 minutes)
■ Student Debrief   (10 minutes)
   Total Time   **(60 minutes)**
Fluency Practice (12 minutes)

▪ Sprint: Multiply Multiples of 10, 100, and 1,000   (9 minutes)
▪ Multiply Mentally   (3 minutes)

Sprint: Multiply Multiples of 10, 100, and 1,000 (9 minutes)

Materials: (S) Multiply Multiples of 10, 100, and 1,000 Sprint

Note: This Sprint reinforces concepts taught and reviewed in Lessons 1–6.

Multiply Mentally (3 minutes)

Note: Reviewing these mental multiplication strategies provides a foundation for students to succeed during the Concept Development.

    T: (Write $3 \times 2 =$ ____.) Say the multiplication sentence.
    S: $3 \times 2 = 6$.
    T: (Write $3 \times 2 = 6$. Below it, write $40 \times 2 =$ ____.) Say the multiplication sentence.
    S: $40 \times 2 = 80$.
    T: (Write $40 \times 2 = 80$. Below it, write $43 \times 2 =$ ____.) Say the multiplication sentence.
    S: $43 \times 2 = 86$.

Repeat process for the following possible sequence: 32×3, 21×4, and 24×4, directing students to follow the format demonstrated for them.

Application Problem (10 minutes)

The basketball team is selling T-shirts for $9 each. On Monday, they sold 4 T-shirts. On Tuesday, they sold 5 times as many T-shirts as on Monday. How much money did the team earn altogether on Monday and Tuesday?
Note: This is a multi-step word problem reviewing multiplying by multiples of 10 from Lesson 5, including multiplicative comparison.

> **NOTES ON MULTIPLE MEANS OF ENGAGEMENT:**
>
> Extend the Application Problem for students above grade level with open-ended questions, such as the following:
>
> - What might be an explanation for the large difference in T-shirt sales between Monday and Tuesday?
> - Based on your thoughts, what might be a strategy for generating the most money from T-shirt sales?
> - Given the increase in T-shirts sold, should the team increase or decrease the price of the shirt? Explain your reasoning.

Concept Development (28 minutes)

Materials: (T) Ten thousands place value chart (Template)
            (S) Personal white board, ten thousands place value chart (Template)

Problem 1: Represent 2 × 23 with disks. Write a matching equation, and record the partial products vertically.

- T: Use your place value chart and draw disks to represent 23.
- T: Draw disks on your place value chart to show 1 more group of 23. What is the total value in the ones?
- S: 2 × 3 ones = 6 ones = 6.
- T: Write 2 × 3 ones under the ones column. Let's record 2 × 23 vertically.
- T: We record the total number for the ones below, just like in addition. (Record the 6 ones as shown above.)
- T: Let's look at the tens. What is the total value in the tens?
S: 2 × 2 tens = 4 tens = 40.

T: Write 2 × 2 tens under the tens column. Let's represent our answer in the problem. We write 40 to represent the value of the tens.

T: What is the total value represented by the disks?

S: The total value is 46 because 4 tens + 6 ones = 46.

T: Notice that when we add the values we wrote below the line that they add to 46, the product!

Repeat with 3 × 23.

Problem 2: Model and solve 4 × 54.

T: Draw disks to represent 54 on your place value chart. What is 54 in unit form?

S: 5 tens 4 ones.

T: Draw three more groups of 54 on your chart, and then write the expression 4 × 54 vertically on your personal white board.

T: What is the value of the ones now?

S: 4 × 4 ones = 16 ones.

T: Record the value of the ones. What is the value of the tens?

S: 4 × 5 tens = 20 tens.

T: Record the value of the tens.

T: Add up the **partial products** you recorded. What is the sum?

S: 216.

T: Let's look at our place value chart to confirm.

T: Can we change to make larger units?

S: Yes, we can change 10 ones for 1 ten and 10 tens for 1 hundred twice.

T: Show me.

S: (Change 10 smaller units for 1 larger.)

T: What value is represented on the place value chart?

S: 2 hundreds, 1 ten, and 6 ones. That's 216.

Repeat with 5 × 42.

> **NOTES ON MULTIPLE MEANS OF ACTION AND EXPRESSION:**
>
> Some learners may have difficulty drawing, tracking, and organizing place value disks to represent 4 × 54. A similar demonstration of renaming in the tens and ones place can be shown through 3 × 34. Alternatively, students can model numerals (i.e., writing 4 instead of 4 ones disks).

Problem Set (10 minutes)

Students should do their personal best to complete the Problem Set within the allotted 10 minutes. For some classes, it may be appropriate to modify the assignment by specifying which problems they work on first. Some problems do not specify a method for solving. Students should solve these problems using the RDW approach used for Application Problems.

Student Debrief (10 minutes)

Lesson Objective: Use place value disks to represent two-digit by one-digit multiplication.

The Student Debrief is intended to invite reflection and active processing of the total lesson experience.

Invite students to review their solutions for the Problem Set. They should check work by comparing answers with a partner before going over answers as a class. Look for misconceptions or misunderstandings that can be addressed in the Debrief. Guide students in a conversation to debrief the Problem Set and process the lesson.

Any combination of the questions below may be used to lead the discussion.

- What pattern do you notice in the answers to Problems 1(a), 1(b), 1(c), and 1(d)?
- Describe the renaming you had to do when solving Problem 2(a). How is it different from the renaming you had to do when solving Problem 2(b)?
- Why did some of the problems require you to use a hundreds column in the place value chart, but others did not?
- When you start solving one of these problems, is there a way to tell if you are going to need to change 10 tens to 1 hundred or 10 ones to 1 ten?
- How did the Application Problem connect to today's lesson?
    - If we found the total number of T-shirts sold first (24) and then multiplied to find the total amount of money, what would our multiplication problem have been? (24 × 9.)
    - What do the **partial products** for 24 × 9 represent in the context of the word problem?

Lesson 7:   Use place value disks to represent two-digit by one-digit multiplication.

EUREKA MATH™

▪ Talk to your partner about which method you prefer. Do you prefer writing the partial products or using a place value chart with disks? Is one of these methods easier for you to understand? Does one of them help you solve the problem faster?

Exit Ticket (3 minutes)

After the Student Debrief, instruct students to complete the Exit Ticket. A review of their work will help with assessing students' understanding of the concepts that were presented in today's lesson and planning more effectively for future lessons. The questions may be read aloud to the students.

A

Number Correct: _____

Multiply Multiples of 10, 100, and 1,000

1.	3 × 2 =		23.	7 × 5 =	
2.	30 × 2 =		24.	700 × 5 =

Lesson 8

Objective: Extend the use of place value disks to represent three- and four-digit by one-digit multiplication.

Suggested Lesson Structure

■ Fluency Practice   (12 minutes)
■ Application Problem   (8 minutes)
■ Concept Development   (30 minutes)
■ Student Debrief   (10 minutes)
Total Time   **(60 minutes)**
Fluency Practice (12 minutes)

▪ Expanded Form   (3 minutes)
▪ Multiply Mentally   (3 minutes)
▪ Multiply Using Disks   (6 minutes)

Expanded Form (3 minutes)

Materials: (S) Personal white board

Note: Reviewing standard form versus expanded form prepares students to decompose multi-digit multiplication sentences into a series of multiplication sentences.

T: (Write 200 + 30 + 4.) Say the addition sentence with the answer in standard form.
S: 200 + 30 + 4 = 234.

Repeat the process for the following possible sequence: 3,000 + 500 + 60 + 8 and 400 + 7 + 90.

T: (Write 572.) Say the number.
S: 572.
T: On your personal white board, write 572 in expanded form.
S: (Write 572 = 500 + 70 + 2.)

Repeat the process using the following possible sequence: 8,463 and 9,075.

        Lesson 8:   Extend the use of place value disks to represent three- and four-digit
                         by one-digit multiplication.
        ©2018 Great Minds®. eureka-math.org

        EUREKA
        MATH™

Multiply Mentally (3 minutes)

Note: Reviewing these mental multiplication strategies provides a foundation for students to succeed during the Concept Development.

Repeat the process from Lesson 7 using the following possible sequence: 34 × 2, 31 × 3, 22 × 4, and 24 × 3.

Multiply Using Disks (6 minutes)

Materials: (S) Personal white board

Note: This fluency activity reviews Lesson 7's content.

> T: (Write 1 × 32.) On your personal white board, draw place value disks to show this multiplication sentence.
>
> S: (Draw 3 tens disks and 2 ones disks.)
>
> T: (Write 1 × ____ tens + 1 × ____ ones.) Fill in the blanks, and write the problem vertically.
>
> S: (Write 1 × 3 tens + 1 × 2 ones, and write the problem vertically.)
Repeat the process using the following possible sequence: 2 × 32, 3 × 32, 4 × 32, 2 × 28, and 3 × 51.

Application Problem (8 minutes)

Andre buys a stamp to mail a letter. The stamp costs 46 cents. Andre also mails a package. The postage to mail the package costs 5 times as much as the cost of the stamp. How much does it cost to mail the package and letter?

Note: This problem is a review of Lesson 7 and incorporates multiplicative comparison. Students who examine the tape diagram find a more rapid solution is to multiply to find 6 units of 46 cents.

Concept Development (30 minutes)

Materials: (T) Ten thousands place value chart (Lesson 7 Template) (S) Personal white board, ten thousands
place value chart (Lesson 7 Template)

Note: Today's lesson is an extension of Lesson 7. Students solve three- and four-digit by one-digit
multiplication using the same method as they used in Lesson 7. Students should be given more autonomy to
work on the problems in partnerships or individually. A connection regarding the process should be made so
that students understand that although the numbers are larger, the process is the same.

**Problem 1: Represent 2 × 324 with disks. Write a matching equation, and record the partial products
vertically.**

- T: Use your place value chart to
  represent 2 times 324.
- T: What is the value in the
  ones?
- S: 2 times 4 ones is 8 ones or 8.
- T: The tens?
- S: 2 times 2 tens is 4 tens or 40.
- T: The hundreds?
- S: 2 times 3 hundreds is
  6 hundreds or 600.
- T: Beneath your place value chart, as we did in
  yesterday's lesson, write an expression that shows the
  total value expressed in the chart.
- S: (Write 2 × 3 hundreds + 2 × 2 tens + 2 × 4 ones.)
- T: Write 2 times 324 vertically on your personal white
  board. Record the partial products for the ones, tens,
  and hundreds.
- T: What is the value of the disks represented on the
  chart?
- S: 648.
- T: Add the values that you wrote in the problem. What is
  their sum?
- S: 648. It's another way to represent the answer!
- T: Work with a partner to solve 3 × 231.
Monitor and provide assistance as students work in pairs to solve.

**NOTES ON
MULTIPLE MEANS
OF REPRESENTATION:**

Clarify math language such as
*expression, value, vertically, partial
products, equation,* and *sum* for English
language learners. Offer explanations
in students' first language if possible.
Link vocabulary to words they may be
more familiar with, for example, *sum*
has a similar meaning to *total.* Make
sure to distinguish *some* from *sum.*

Lesson 8:   Extend the use of place value disks to represent three- and four-digit
                                by one-digit multiplication.

©2018 Great Minds®. eureka-math.org

EUREKA
MATH™

Problem 2: Model and solve 4 × 605 on the place value chart.

T: Draw disks to represent 4 times 605 on your place value chart. Write 4 × 605 vertically on your board.
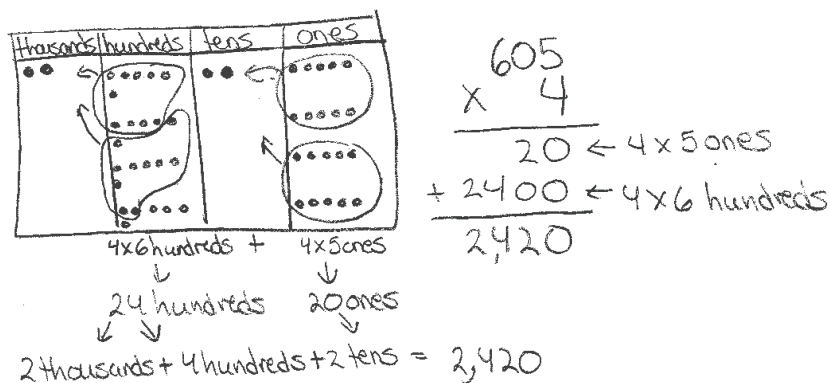

T: Tell your partner the value of the digit in each place.

S: The value of the ones is 4 times 5 ones equals 20 ones.
     The value of the tens is 4 times 0 tens equals 0 tens.
     The value of the hundreds is 4 times 6 hundreds equals 24 hundreds.

T: Do we need to regroup?

S: Yes. We can change 10 ones for 1 ten twice and 10 hundreds for 1 thousand twice.

T: Show me. (Students regroup.)

T: What value is represented on the place value chart?

S: 2 thousands, 4 hundreds, 2 tens, and 0 ones. That's 2,420.

T: Add the numbers that we wrote in the problem. What is the sum?

S: 2,420.

> **NOTES ON MULTIPLE MEANS OF REPRESENTATION:**
>
> Challenged by representing 605 as place value disks 4 times, students may begin to seek more efficient ways of modeling multiplication of large numbers. Review the advantages of tracking regrouping, yet encourage innovation and discovery of a quicker method as introduced in Problem 3.

Repeat with 5 × 464.

Problem 3: Solve 3 × 851 using a partial products drawing on the place value chart.

T: Write the problem 3 × 851 vertically. This time, rather than recording 3 groups of 851 to begin, let's record the partial products as we multiply each unit.

T: 3 times 1 one is…?

S: 3 ones.

T: Record that in your place value chart at the top of the ones place.

T: 3 times 5 tens?

S: 15 tens.

T: Record that in your place value chart as 1 hundred 5 tens a bit lower than the ones so you can see the separate partial product.

T: 3 times 8 hundreds?

S: 24 hundreds.

T: Record that in your place value chart as…?

S: 2 thousands 4 hundreds.

T: Where?

S: A bit lower than the 1 hundred 5 tens.

T: Just as we record the partial products numerically, we draw them. This does not show the connection to addition well, but it does show the partial products well. Can you see the three partial products?

S: Yes.

T: Just looking at the place value chart for now, what are the products from least to greatest in unit form?

S: 3 ones, 1 hundred 5 tens, and 2 thousands 4 hundreds.

T: What is the total product recorded both in your vertical problem and in your place value chart?

S: 2,553.
Repeat with 3 × 763.

Problem 4: Solve 4 × 6,379 using a partial products drawing on the place value chart.

T: Write the equation 4 × 6,379. Let's record the partial products as we multiply each unit.

T: 4 times 9 ones is…?

S: 36 ones or 3 tens 6 ones.

T: Record that in your place value chart at the top.

T: 4 times 7 tens?

S: 28 tens.

T: Record that in your place value chart as 2 hundreds 8 tens a bit lower than the 3 tens 6 ones so you can see the separate partial product.

T: 4 times 3 hundreds?

S: 12 hundreds.

T: Record that in your place value chart as…?

S: 1 thousand 2 hundreds.

T: Where?

S: A bit lower than the 2 hundreds 8 tens.

EUREKA MATH™
T: 4 times 6 thousands?

S: 24 thousands. → 2 ten thousands 4 thousands.

T: Where?

S: A bit lower than the 1 thousand 2 hundreds.

T: Can you see the four partial products?

S: Yes.

T: Find the total of the partial products both in your problem and in your place value chart. Notice that you will need to regroup when you find the total of the partial products. What is the total?

S: 25,516.

T: Work with a partner to solve 3 × 2,567.

Give students time to work through the problem and provide guidance as needed.

Problem Set (10 minutes)

Students should do their personal best to complete the Problem Set within the allotted 10 minutes. For some classes, it may be appropriate to modify the assignment by specifying which problems they work on first. Some problems do not specify a method for solving. Students should solve these problems using the RDW approach used for Application Problems.

Student Debrief (10 minutes)

Lesson Objective: Extend the use of place value disks to represent three- and four-digit by one-digit multiplication.

The Student Debrief is intended to invite reflection and active processing of the total lesson experience.

Invite students to review their solutions for the Problem Set. They should check work by comparing answers with a partner before going over answers as a class. Look for misconceptions or misunderstandings that can be addressed in the Debrief. Guide students in a conversation to debrief the Problem Set and process the lesson.

Any combination of the questions below may be used to lead the discussion.

- What pattern did you notice in the answers to Problem 1(a) and (b)?
- If you needed an estimate for Problem 1(c), how could you round one of the numbers? How close would your estimate be to the exact answer?
- Explain to your partner how to solve Problem 2(c). How did you make sure you didn't make any mistakes when there were so many steps to this problem?

Lesson 8:   Extend the use of place value disks to represent three- and four-digit   **121**
by one-digit multiplication.

©2018 Great Minds®. eureka-math.org

- How did the Application Problem connect to today's lesson?
- Compare the two methods of drawing the multiplication on the place value chart.
- Can you think of a word problem that could be modeled by Problem 2(d)?

Exit Ticket (3 minutes)

After the Student Debrief, instruct students to complete the Exit Ticket. A review of their work will help with assessing students' understanding of the concepts that were presented in today's lesson and planning more effectively for future lessons. The questions may be read aloud to the students.

122   **Lesson 8:**   Extend the use of place value disks to represent three- and four-digit
                                    by one-digit multiplication.

Application Problem (4 minutes)

Calculate the total amount of milk in three cartons if each carton contains 236 mL of milk.
Note: This problem is a review of Lesson 8, practicing three-digit by one-digit multiplication.

Concept Development (34 minutes)

Materials: (T) Ten thousands place value chart (Lesson 7 Template) (S) Personal white board, ten thousands place value chart (Lesson 7 Template)

Problem 1: Represent and solve 6 × 162 in the place value chart. Relate the process to solving using the standard algorithm.

T: Represent 6 × 162 on your place value chart using the repeated addition way. Work with a partner to solve. Was it necessary to regroup?

S: Yes. On my place value chart, I had 6 hundreds, 36 tens, and 12 ones. I regrouped 10 ones for 1 ten and 30 tens for 3 hundreds. My answer is 9 hundreds, 7 tens, and 2 ones.

T: Write the expression 6 × 162 again vertically on your personal white boards. Let's find a faster way to express your answer. Use the place value chart to help.

T: Tell me what happened in the ones column of your place value chart.

S: I multiplied 6 times 2 ones to get 12 ones. We regrouped 10 ones for 1 ten and were left with 2 ones.

T: Record the number of regrouped tens on the line under the tens column. Record the number of ones in the ones place.

T: Tell me what happened in the tens column of your place value chart.

S: I multiplied 6 times 6 tens and got 36 tens. We exchanged 30 tens for 3 hundreds and were left with 6 tens. → But, we have the 1 ten regrouped from the ones, so 36 tens plus the 1 ten makes 37 tens. So, we have 3 hundreds and 7 tens after we regroup.

EUREKA MATH™   Lesson 9:   Multiply three- and four-digit numbers by one-digit numbers   **131**
                       applying the standard algorithm.

©2018 Great Minds®. eureka-math.org
T: Record the number of hundreds on the line in the hundreds column. Record the number of tens in the tens place. What about the 1 that was written on the line in the tens place, do I need it anymore?

S: No, we counted it already.

T: Right, so if we're done with it, let's get rid of it. Cross it out.

T: Now, let's look at the hundreds. What was the value of the hundreds?

S: We had 6 times 1 hundred equals 6 hundreds. 6 hundreds plus the 3 hundreds we regrouped equals 9 hundreds.

T: Since there's no need to regroup, write the number of hundreds in the hundreds place. Have we already counted the 3 hundreds we regrouped?

S: Yes!

T: Cross it out. What's the product?

S: 972. That's the same number we got with the place value chart!

Problem 2: Solve 5 × 237 using the partial products algorithm. Then solve using the standard algorithm, and relate the two methods to each other.

T: Write the expression 5 × 237 vertically on your board. Draw and solve using partial products.

Students work individually or in pairs to draw and solve using partial products.

T: Now, let's solve using the standard algorithm. Starting in the ones column, what do we do?

S: We multiply 5 times 7 ones and get 35 ones.

T: Tell your partner how you record 35 ones as partial products.

S: 35 ones is 3 tens 5 ones, so we record 3 tens in the tens column and 5 ones in the ones column on the same line.

T: Let's record 3 tens 5 ones using the standard algorithm. (Record 3 tens on the line and 5 ones in the ones column.) Tell your partner what you notice about this recording.

S: The 3 tens is on the line in the tens like in addition and the 5 ones is in the ones place, so it still shows 35 ones. → We add partial products together, so the 3 tens on the line means it will get added to the product.

T: Working in the tens column, what do we do next?

S: We multiply 5 times 3 tens and get 15 tens.

T: 15 tens was recorded on the second line in the partial products method. For the standard algorithm, add 3 tens to 15 tens.

S: 18 tens.

T: Say 18 tens as hundreds and tens.

S: 1 hundred 8 tens.

T: Record 1 hundred on the line in the hundreds column and 8 tens in the tens column. Cross out 3 tens because it was added.

T: What do we do next?

EUREKA MATH™

S: Next, we multiply 5 times 2 hundreds and get 10 hundreds. → But, in the standard algorithm we have to add the 1 hundred that is on the line to make 11 hundreds.

T: Remember to cross off the 1 since we have already included it in our answer. Because there are no more numbers to multiply, we can just record 11 hundreds directly in the product, which is…?

S: 1,185.

T: Look back at the work that you did when you solved using partial products. What was the product?

S: 1,185. It's the same thing. We came up with the same product even though our methods were different.

T: What are the advantages to the standard algorithm?

S: We record our answer on one line. → We are doing all of the calculations in a few steps.

Repeat using 6×716.

Problem 3: Multiply three- and four-digit numbers by one-digit numbers applying the standard algorithm.

Write or project the following:

Shane measured 457 mL of water in a beaker. Olga measured 3 times as much water. How much water did they measure altogether?

T: Draw a tape diagram and discuss with a partner how you would solve this problem.

S: We would multiply 4 times 457 to solve this problem. If Olga measured 3 times as much water as Shane, we multiply by four to find the total.

T: Solve using the standard algorithm. What do we multiply first?

S: Four times 7 ones equals 28 ones.

T: Show me how to record 28 ones.

S: I write the 2 on the line under the tens place. I write the 8 in the ones.

T: What do we multiply next?

S: Four times 5 tens is 20 tens plus 2 tens that were changed from the ones. I have 22 tens. I cross off the 2 because I just included it in the total for the tens. I write 22 tens in my answer. The 2 is written in the hundreds place on the line to show that we regrouped to the hundreds, and the 2 is written in the tens.

T: What do we multiply next?

S: Four times 4 hundreds equals 16 hundreds. Then, I add 2 hundreds to get 18 hundreds. I cross off the 2 because I included it in the total hundreds. Because there are no more numbers to multiply, I record 18 hundreds directly in my product. The product is 1,828.

> **NOTES ON
> MULTIPLE MEANS
> OF ENGAGEMENT:**
>
> Have students use and compare the two methods: partial products and the standard algorithm. Encourage learners to analyze their proficiency and efficiency using each method. Guide students to ask, "What mistakes do I make? When? Which method is easier for me? When? Why?"
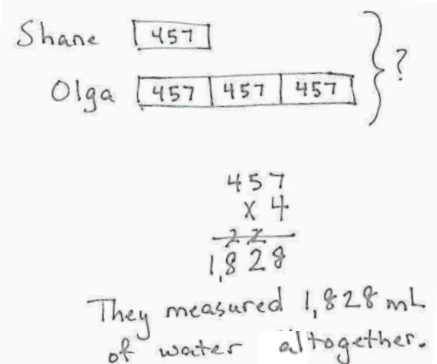

EUREKA MATH™

Lesson 9:   Multiply three- and four-digit numbers by one-digit numbers applying the standard algorithm.

Problem Set (10 minutes)

Students should do their personal best to complete the Problem Set within the allotted 10 minutes. For some classes, it may be appropriate to modify the assignment by specifying which problems they work on first. Some problems do not specify a method for solving. Students solve these problems using the RDW approach used for Application Problems.

Student Debrief (10 minutes)

Lesson Objective: Multiply three- and four-digit numbers by one-digit numbers applying the standard algorithm.

The Student Debrief is intended to invite reflection and active processing of the total lesson experience.

Invite students to review their solutions for the Problem Set. They should check work by comparing answers with a partner before going over answers as a class. Look for misconceptions or misunderstandings that can be addressed in the Debrief. Guide students in a conversation to debrief the Problem Set and process the lesson.

Any combination of the questions below may be used to lead the discussion.

- Explain to your partner how you used partial products and the standard algorithm to solve Problems 1(a) and 1(b). Why do both methods work? How are they different?

- Look at the questions in Problem 2. Which ones would give you estimates that are very close to the actual product if you rounded the larger number to the hundreds place?

- Do you think that you would get a different answer for Problem 4 if the question instead asked you to find 457 times as much as 9? Why or why not?

- Explain to your partner how you solved Problem 7. How did you keep track of what each of the numbers meant?

- How could you use a tape diagram to represent the work you did on the Application Problem?

- What significant vocabulary did we use today?

> **NOTES ON MULTIPLE MEANS OF REPRESENTATION:**
>
> Many learners, in addition to English language learners, will appreciate a review of *standard algorithm* and *partial products* as new math language. Point out, if beneficial, smaller words embedded in these compound words, such as *part* in *partial*. Students may benefit from recording these new terms with clarifying examples in their own math dictionaries.

Lesson 9:   Multiply three- and four-digit numbers by one-digit numbers applying the standard algorithm.

EUREKA MATH™

Lesson 10

Objective: Multiply three- and four-digit numbers by one-digit numbers applying the standard algorithm.

Suggested Lesson Structure

- ■ Fluency Practice   (12 minutes)
- ■ Application Problem   (5 minutes)
- ■ Concept Development   (33 minutes)
- ■ Student Debrief   (10 minutes)

   Total Time   **(60 minutes)**
Fluency Practice (12 minutes)

- ▪ Represent Expanded Form   (3 minutes)
- ▪ Multiply Mentally   (3 minutes)
- ▪ Multiply Using Partial Products   (6 minutes)

Represent Expanded Form (3 minutes)

Materials: (S) Place value disks

Note: This activity incorporates expanded form fluency from Lessons 8 and 9 while reviewing how to use place value disks.

> T: (Write 532.) Say the number in expanded form.
>
> S: 532 equals 500 plus 30 plus 2.
>
> T: Say it in unit form.
>
> S: 532 equals 5 hundreds 3 tens 2 ones.
>
> T: Use your disks to show 5 hundreds 3 tens 2 ones.

Repeat the process for the following possible sequence: 415, 204, 3,241, and 2,053.

Multiply Mentally (3 minutes)

Note: Reviewing these mental multiplication strategies provides a foundation for students to succeed during the Concept Development.

Repeat the process from Lesson 7 for the following possible sequence: 342×2, 132×3, 221×4, and 213×4.

NOTES ON MULTIPLE MEANS OF ENGAGEMENT:

Extend Represent Expanded Form by challenging students above grade level to do one of the following:

- ▪ Use your disks to show 1,000/100/10 less/more than 3,241.
- ▪ Use your disks to show another number that would be rounded to the same ten/hundred as 2,053.

EUREKA MATH™

Lesson 10:   Multiply three- and four-digit numbers by one-digit numbers applying the standard algorithm.

©2018 Great Minds®. eureka-math.org

143

Multiply Using Partial Products (6 minutes)

Materials: (S) Personal white board

Note: This activity serves as a review of the Concept Development in Lessons 7 and 8.

- T: (Write 322 × 7.) Say the multiplication expression.
- S: 322 × 7.
- T: Say it as a three-product addition expression in unit form.
- S: (3 hundreds × 7) + (2 tens x 7) + (2 ones × 7).
- T: Write 322 × 7 vertically, and solve using the partial product strategy.

Repeat the process for the following possible sequence: 7 thousands 1 hundred 3 tens 5 ones × 5 and 3 × 7,413.

Application Problem (5 minutes)

The principal wants to buy 8 pencils for every student at her school. If there are 859 students, how many pencils does the principal need to buy?

Note: This problem is a review of Lesson 9. Students may solve using the algorithm or partial products. Both are place value strategies.

Concept Development (33 minutes)

Materials: (S) Personal white board

Problem 1: Solve 5 × 2,374 using partial products, and then connect to the algorithm.

Display 5 × 2,374 vertically on the board.

- T: With your partner, solve 5 × 2,374 using the partial products method.

Allow two minutes to solve.

- T: Now, let's solve using the algorithm. Say a multiplication sentence for the ones column.

Lesson 10:   Multiply three- and four-digit numbers by one-digit numbers
                          applying the standard algorithm.

©2018 Great Minds®. eureka-math.org

EUREKA
MATH™

S: 4 ones times 5 is 20 ones or 2 tens.

T: Tell your partner how to record 20 ones or 2 tens.

S: I am going to record 2 tens on the line in the tens column and the 0 in the ones column.

T: Do you have 20 ones recorded in your answer from the partial products?

S: Yes!

T: What is multiplied in the tens column?

S: 7 tens times 5 is 35 tens. → I notice when I look back at the partial products, I also have 35 tens or 3 hundreds 5 tens.
T: Tell your partner what to do with 3 hundreds 5 tens and the 2 tens we recorded on the line.

S: We have to add the 2 tens to get 37 tens or 3 hundreds 7 tens. → Why do the partial products only show 350 though?

T: Discuss with your partner why the algorithm shows 37 tens, but the partial product shows 35 tens.

S: In the partial products method, we add the 2 tens to 35 tens later after multiplying each place value separately. In the algorithm, you add as you go.

T: Let's record 3 hundreds 7 tens or 37 tens. Cross off the 2 tens on the line because they've been added in.

T: What is our multiplication sentence for the hundreds column?

> **NOTES ON MULTIPLE MEANS OF REPRESENTATION:**
>
> Learners and mathematicians differ in the strategies they use to solve a problem. Whether we use the standard algorithm or partial products strategy, our product is the same. Cultivate a classroom culture of acceptance of multiple methods to solve. Encourage students to share and innovate efficient strategies for this and other math topics.

S: 3 hundreds times 5 is 15 hundreds or 1 thousand 5 hundreds. → I noticed the 1,500 in the partial products strategy came next. The algorithm is multiplying in the same order starting with the ones column and moving left. → We add the 3 hundreds that were changed from tens. Now we have 18 hundreds. I cross out the 3 on the line because I've added it.

T: Right. Last, we have the thousands column.

S: 2 thousands times 5 plus 1 thousand is 11 thousands.

T: Notice that our answer is the same when we used the algorithm and the partial products strategy.

Repeat using 9 × 3,082.

EUREKA MATH™

Lesson 10:   Multiply three- and four-digit numbers by one-digit numbers applying the standard algorithm.

145

Problem 2: Solve 6 × 3,817 using the algorithm.

Display 6 × 3,817 vertically on the board.

    T: With your partner, solve 6 × 3,817 using the algorithm.

Allow students two minutes to solve. Listen for use of unit language to multiply, such as 6 times 7 ones is 42 ones.

Repeat with 3 × 7,109.

$$\begin{array}{r} 3{,}817 \\ \times\quad 6 \\ \hline 22{,}902 \end{array}$$

Problem 3: Solve a word problem that requires four-digit by one-digit multiplication using the algorithm.

There are 5,280 feet in a mile. If Bryan ran 4 miles, how many feet did he run?

    T: Discuss with your partner how you would solve this problem.

    T: On your own, use the algorithm to solve for how many feet Bryan ran.

    S: 5,280 × 4 is 21,120. Bryan ran 21,120 feet.

Problem Set (10 minutes)

Students should do their personal best to complete the Problem Set within the allotted 10 minutes. For some classes, it may be appropriate to modify the assignment by specifying which problems they work on first. Some problems do not specify a method for solving. Students should solve these problems using the RDW approach used for Application Problems.

Student Debrief (10 minutes)

Lesson Objective: Multiply three- and four-digit numbers by one-digit numbers applying the standard algorithm.

The Student Debrief is intended to invite reflection and active processing of the total lesson experience.

Invite students to review their solutions for the Problem Set. They should check work by comparing answers with a partner before going over answers as a class. Look for misconceptions or misunderstandings that can be addressed in the Debrief. Guide students in a conversation to debrief the Problem Set and process the lesson.

Any combination of the questions below may be used to lead the discussion.

- What pattern did you notice while solving Problems 1(a) and (b)?
- What happens to the product if one factor is doubled? Halved?
- What other patterns did you notice while working on Problem 1?

Lesson 10:   Multiply three- and four-digit numbers by one-digit numbers applying the standard algorithm.

EUREKA
MATH™

Lesson 11

Objective: Connect the area model and the partial products method to the standard algorithm.

Suggested Lesson Structure

■ Fluency Practice   (12 minutes)
■ Application Problem   (7 minutes)
■ Concept Development   (31 minutes)
■ Student Debrief   (10 minutes)

Total Time   **(60 minutes)**
Fluency Practice (12 minutes)

▪ Multiply Mentally   (4 minutes)
▪ Multiply in Three Different Ways   (8 minutes)

Multiply Mentally (4 minutes)

Note: Reviewing these mental multiplication strategies provides a foundation for students to succeed during the Concept Development.

Repeat the process from Lesson 7, expanding to four-digits for the following possible sequence: $4,312 \times 2$, $2,032 \times 3$, $2,212 \times 4$, and $3,203 \times 4$.

Multiply in Three Different Ways (8 minutes)

Materials: (S) Place value disks

Note: This fluency activity reviews the Concept Development in Lessons 7–10.

T: (Write 43×2.) Say the multiplication expression in unit form.
S: 4 tens 3 ones × 2.
T: Show the multiplication expression using partial products.
S: (Write $(40 \times 2) + (3 \times 2)$.)
T: Show the multiplication expression using place value disks.
S: (Show multiplication expression using place value disks.)
T: Write the multiplication expression using the standard algorithm.
T: (Students do so.)

Repeat the process using the following possible sequence: 54×2 and 63×3.

EUREKA MATH™

Lesson 11:   Connect the area model and the partial products method to the standard algorithm.

©2018 Great Minds®. eureka-math.org

153

Application Problem (7 minutes)

Write an equation for the area of each rectangle. Then, find the sum of the two areas.

Extension: Find a faster method for finding the area of the combined rectangles.

$A = 8 \times 30$ $A = 8 \times 4$

$A = 240$ $A = 32$

$\begin{array}{r} 240 \\ +\ 32 \\ \hline 272 \end{array}$ The area of the combined rectangles is 272.

$A = 8 \times (30 + 4)$

$A = 8 \times 34$

$\begin{array}{r} 34 \\ \times\ 8 \\ \hline 272 \end{array}$

Note: This problem is designed to bridge learning from Topic A, in which students solved for the area, to this lesson, where they learn to model multiplication problems using the area model. The placement of the small rectangle to the right of the larger rectangle is intentional for showing the tens and ones of the area model. It is recommended that this problem be presented immediately prior to the Concept Development.

> **NOTES ON MULTIPLE MEANS OF ACTION AND EXPRESSION:**
>
> Scaffold student use of the area model to solve with the following options:
> - Provide a blank area model template for students to slip into their personal white boards.
> - Review expanded form with place value cards or place value disks.
> - Simplify the multiplication. For example, use 4 as a factor rather than 8.

Concept Development (31 minutes)

Materials: (S) Personal white board

Problem 1: Multiply a three-digit number by a one-digit number using the area model.

- T: Draw a rectangle with a width of 8 and a length of 200.
- S: (Draw.)
- T: Tell your neighbor how to find the area.
- S: Multiply 8 times 200. That equals 1,600.
- T: Write the area inside your rectangle.
- T: Think back to the Application Problem (above). We had two rectangles also with the width of 8. Let's combine all three rectangles: this one and the two from the Application Problem. (Draw them.) With your partner, discuss how to find the area of all three rectangles put together.

$\begin{array}{r} 234 \\ \times\ 8 \\ \hline 1,600 \\ 240 \\ +\ \ \ 32 \\ \hline 1,872 \end{array}$

$8 (200 + 30 + 4)$
$(8 \times 200) + (8 \times 30) + (8 \times 4)$

S: In the Application Problem, I multiplied 8 times 4 and 8 times 30. So, then I can also multiply 8 times 200 and add all the sums together.

T: Record that as one continuous addition problem with your partner.

Guide students to record (8 × 200) + (8 × 30) + (8 × 4).

T: You are saying to multiply each section of the lengths by 8? (Record 8 (200 + 30 + 4) on the board.)

S: Yes.

T: Solve to find the area of the entire rectangle. Let's begin with the largest rectangle.

T: 8 times 200?

S: 1,600. (Record 1,600 as a partial product in the area model and in the written method.)

T: 8 times 30?

S: 240. (Record 240 as a partial product in the area model and in the written method.)

T: Show your partner where to record 8 times 4. Tell your partner the multiplication sentence represented by the area model.

S: 8 times 234 equals 1,872.

T: Compare the partial products to the rectangular area model.

S: The area inside each smaller rectangle is the same as each of the partial products.

T: We recorded the partial products starting with the largest unit, the hundreds. Does the order of partial products change the final product? Work with your partner to solve 8 times 234 using partial products, beginning with the smallest unit, the ones.

S: The answer is the same. I can multiply in any order using partial products. → The order of addends does not matter. That's the commutative property of addition. I can record partial products using the smallest or largest unit first.

T: Yes, the rectangle, or area model, is another way to represent the partial products in multiplication.

NOTES ON MULTIPLE MEANS OF ACTION AND EXPRESSION:

One advantage of the area model is its flexibility for learners. Students can represent their partial products as arrays of place value disks, in unit form, or standard form. Though not as efficient as the standard algorithm, it may be an effective scaffold for students working below grade level.

Problem 2: Multiply a three-digit number by a one-digit number, connecting the area model to the standard algorithm.

Display 316 × 4.

T: How many hundreds, tens, and ones are in 316?

S: 3 hundreds 1 ten 6 ones.

T: Draw an area model with a length of 3 hundreds 1 ten 6 ones and a width of 4.

T: Tell your partner how to solve using the area model.

S: The rectangle is partitioned into hundreds, tens, and ones. I'll multiply 4 times 3 hundreds, 4 times 1 ten, and 4 times 6 ones and add the three products together for the answer. → That's like the break apart and distribute property we learned last year.

T: Yes, the **distributive property** allows us to break apart the large multiplication problem into three smaller ones.

T: Work with your partner to multiply.

Circulate, providing assistance, while students work.

T: 4 times 3 hundreds is…?

S: 12 hundreds.

T: 4 times 1 ten is…?

S: 4 tens.

T: 4 times 6 ones is…?

S: 24 ones.

T: Solve 316 times 4 using the standard algorithm, and compare your answer to the area model.

S: 316 times 4 is 1,264. I got that answer using both methods. → The area model doesn't let me show how to regroup 24 ones for 2 tens 4 ones, but the algorithm does. → I can regroup in the area model. I can draw an arrow to regroup 20 ones as 2 tens. Now, my area model looks like a place value chart because I regrouped to show 6 tens. → The area model aligns better to the partial products method, but the algorithm is still the quickest way for me to solve!
Repeat with 5,463 × 5, drawing the area model and comparing it to the algorithm or the partial products method.

Problem 3: Solve a word problem using the standard algorithm, area model, or partial products strategy.

A cafeteria makes 4,408 lunches each day. How many lunches are made Monday through Friday?

T: Discuss with your partner how to solve this problem.

T: What are some methods you could use to solve this?

S: An area model could help. → I like using the partial products method. → I think I can just use the algorithm.

T: You could also use the distributive property to help break apart and solve. Choose your method and solve.

156   Lesson 11:   Connect the area model and the partial products method to the
                                        standard algorithm.

                    ©2018 Great Minds®. eureka-math.org

EUREKA
MATH™
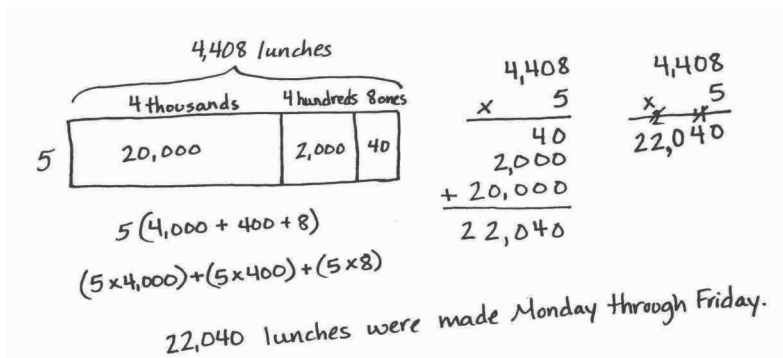

S: 4,408 × 5 is 22,040. The cafeteria makes 22,040 lunches Monday through Friday.

When debriefing the solution, make note of how to draw an area model without a digit in the tens column.

Problem Set (10 minutes)

Students should do their personal best to complete the Problem Set within the allotted 10 minutes. For some classes, it may be appropriate to modify the assignment by specifying which problems they work on first. Some problems do not specify a method for solving. Students should solve these problems using the RDW approach used for Application Problems.

Student Debrief (10 minutes)

Lesson Objective: Connect the area model and the partial products method to the standard algorithm.

The Student Debrief is intended to invite reflection and active processing of the total lesson experience.

Invite students to review their solutions for the Problem Set. They should check work by comparing answers with a partner before going over answers as a class. Look for misconceptions or misunderstandings that can be addressed in the Debrief. Guide students in a conversation to debrief the Problem Set and process the lesson.

Any combination of the questions below may be used to lead the discussion.

- Can you solve any of the expressions in Problem 1 using a different method or strategy?
- In Problem 1, how does the area model connect to the expressions written below the area model? How could the **distributive property** be used to solve problems without drawing the area model?
- For Problems 4–6, which method(s) did you choose and why?
- How did the Application Problem introduce today's lesson?
- How is finding the area of a rectangle similar to finding the product using the area model?

Lesson 11:   Connect the area model and the partial products method to the standard algorithm.

4
GRADE

Mathematics Curriculum

Topic D
Multiplication Word Problems

Focus Standards:	■	Interpret a multiplication equation as a comparison, e.g., interpret 35 = 5 × 7 as a statement that 35 is 5 times as many as 7 and 7 times as many as 5. Represent verbal statements of multiplicative comparisons as multiplication equations.
	■	Multiply or divide to solve word problems involving multiplicative comparison, e.g., by using drawings and equations with a symbol for the unknown number to represent the problem, distinguishing multiplicative comparison from additive comparison.
	■	Solve multistep word problems posed with whole numbers and having whole-number answers using the four operations, including problems in which remainders must be interpreted. Represent these problems using equations with a letter standing for the unknown quantity. Assess the reasonableness of answers using mental computation and estimation strategies including rounding.
	■	Multiply a whole number of up to four digits by a one-digit whole number, and multiply two two-digit numbers, using strategies based on place value and the properties of operations. Illustrate and explain the calculation by using equations, rectangular arrays, and/or area models.
Instructional Days:	2	
Coherence -Links from:	G3–M1	Properties of Multiplication and Division and Solving Problems with Units of 2–5 and 10
-Links to:	G3–M3	Multiplication and Division with Units of 0, 1, 6–9, and Multiples of 10
	G5–M2	Multi-Digit Whole Number and Decimal Fraction Operations

Topic D gives students the opportunity to apply their new multiplication skills. In Lesson 12, students extend their work with multiplicative comparison from Topic A to solve real-world problems. As shown on the next page, students use a combination of addition, subtraction, and multiplication to solve multi-step problems in Lesson 13.

EUREKA MATH™

Problem 4: In one month, Charlie read 814 pages. In the same month his mom read 4 times as many pages as Charlie, and that was 143 pages more than Charlie's dad read. What was the total number of pages read by Charlie and his parents?

Solution A:

$$\begin{array}{r} 814 \\ \times\ 4 \\ \hline 3256 \end{array}$$

$$\begin{array}{r} 3256 \\ -\ 143 \\ \hline 3113 \end{array}$$

$$\begin{array}{r} 3256 \\ 3113 \\ +\ 814 \\ \hline 7,183 \end{array}$$
Charlie and his parents read 7,183 pages in one month.

Solution B:

$$\begin{array}{r} 814 \\ \times\ 9 \\ \hline 7326 \end{array}$$

$$\begin{array}{r} 7326 \\ -\ 143 \\ \hline 7,183 \end{array}$$

A Teaching Sequence Toward Mastery of Multiplication Word Problems

Objective 1: Solve two-step word problems, including multiplicative comparison.
(Lesson 12)

Objective 2: Use multiplication, addition, or subtraction to solve multi-step word problems.
(Lesson 13)

EUREKA MATH™

Lesson 12

Objective: Solve two-step word problems, including multiplicative comparison.

Suggested Lesson Structure

■ Fluency Practice   (12 minutes)
■ Concept Development   (35 minutes)
■ Student Debrief   (13 minutes)
   Total Time   **(60 minutes)**
Fluency Practice (12 minutes)

▪ Multiply Mentally   (4 minutes)
▪ Multiply in Three Different Ways   (8 minutes)

Multiply Mentally (4 minutes)

Note: Reviewing these mental multiplication strategies provides a foundation for students to succeed during the Concept Development.

Repeat the process from Lesson 7 with the following possible sequence: $3{,}421 \times 2$, $2{,}302 \times 3$, $2{,}112 \times 4$, and $2{,}023 \times 4$.

Multiply in Three Different Ways (8 minutes)

Materials: (S) Place value disks

Note: This fluency activity reviews the concepts learned in Topic C.

Repeat the fluency activity from Lesson 11, expanding to three- and four-digit numbers for the following possible sequence: 245×2, 301×5, and $5{,}241 \times 2$.

EUREKA MATH™

Concept Development (35 minutes)

Materials: (S) Problem Set

Note: For this lesson, the Problem Set comprises word problems from the Concept Development and is therefore to be used during the lesson itself.

Students may work in pairs to solve Problems 1–4 below using the RDW approach to problem solving.

1. Model the problem.

Have two pairs of students who can be successful with modeling the problem work at the board while the others work independently or in pairs at their seats. Review the following questions before beginning the first problem.

- Can you draw something?
- What can you draw?
- What conclusions can you make from your drawing?

As students work, circulate. Reiterate the questions above.

After two minutes, have the two pairs of students share *only* their labeled diagrams.

For about one minute, have the demonstrating students receive and respond to feedback and questions from their peers.

2. Calculate to solve and write a statement.

Give everyone two minutes to finish work on that question, sharing the work and thinking with a peer. All should then write their equations and statements of the answer.

3. Assess the solution.

Give students one to two minutes to assess the solutions presented by their peers on the board, comparing the solutions to their own work. Highlight alternative methods to reach the correct solution.

> **NOTES ON MULTIPLE MEANS OF ENGAGEMENT:**
>
> Give everyone a fair chance to be successful by providing appropriate scaffolds. Demonstrating students may use translators, interpreters, or sentence frames to present and respond to feedback. Models shared may include concrete manipulatives. If the pace of the lesson is a consideration, prepare presenters beforehand. The first problem may be most approachable for students working below grade level.

EUREKA MATH™

Lesson 12:   Solve two-step word problems, including multiplicative comparison.

169

©2018 Great Minds®. eureka-math.org

Problem 1

The table shows the cost of party favors. Each party guest receives a bag with 1 balloon, 1 lollipop, and 1 bracelet. What is the total cost for 9 guests?

Item	Cost
1 balloon	26¢
1 lollipop	14¢
1 bracelet	33¢

73¢

26 14 33

P

The total cost for 9 party bags is 657¢.

26 + 14 + 33
40 + 33 = 73

73
× 9
657

P = 657¢
This two-step problem requires students to determine the cost of party favors for one guest and then use that information to determine the total cost of party favors for 9 guests. Although RDW is reviewed prior to beginning work on this problem, because of its simplicity, many students might elect to begin solving immediately. Some students may choose to multiply each item by 9 before adding those amounts. Based on their prior experience with money, some students may represent the total amount of 657 cents as $6.57, but they are not required to do so.

Problem 2

The Turner family uses 548 liters of water per day. The Hill family uses 3 times as much water per day. How much water does the Hill family use per week?

548 L

H

548
× 3
1644

1644
× 7
11,508

The Hill family uses 11,508 liters of water per week.

H = 11,508 L
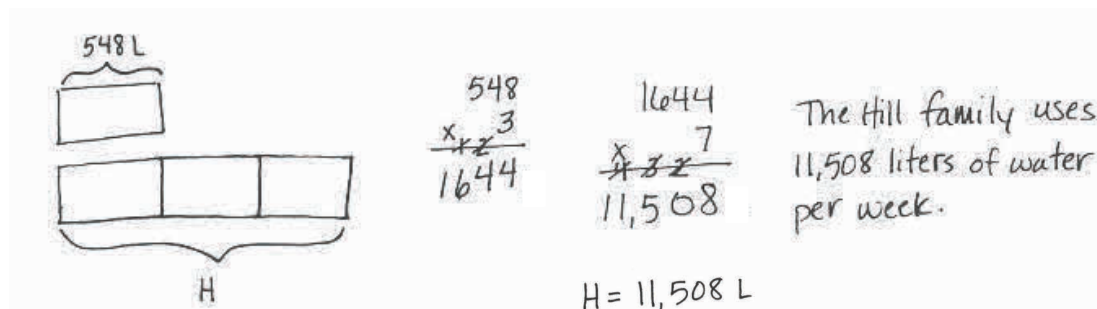

In solving this problem, students use information from the problem and their knowledge of language denoting multiplicative comparison to determine their answer. They must also remember that there are 7 days in a week in order to complete the computation necessary to finish the problem. Models chosen for this problem may include tape diagrams as shown.

170   Lesson 12:   Solve two-step word problems, including multiplicative comparison.

EUREKA MATH

©2018 Great Minds®. eureka-math.org

Problem 3

Jayden has 347 marbles. Elvis has 4 times as many as Jayden. Presley has 799 fewer than Elvis. How many marbles does Presley have?
This two-step problem affords students another opportunity to model with tape diagrams. They are required to apply what they have learned about multiplying multi-digit numbers by single digits, as well as practice their subtraction with multiple regrouping skills from Module 1. Encourage students to also practice mental math, such as when subtracting 799 from 1,388. As illustrated above, note that the diagram may or may not accurately show the relationship between 799 and the unit size, 347. Nevertheless, discuss how one might use mental math to estimate how long Presley's bar should be.

Problem 4

a. Write an equation that would allow someone to find the value of R.

$$R + 239 = 1167 \times 3$$
$$R = 3 \times 1167 - 239$$
Student equations may include one or both of the equations above. They must include the use of the R for the unknown quantity and show that R is equal to 239 less than three times 1,167.

NOTES ON MULTIPLE MEANS OF ACTION AND EXPRESSION:

Support English language learners as they write their own word problems. Provide sentence starters and a word bank.

Sentence starters may include:

"I had _____ (units),"

"How many _____ in all?"

Possible words for the word bank may include:

times as many   fewer than

more than   total   difference

EUREKA MATH™

Lesson 12:   Solve two-step word problems, including multiplicative comparison.

171

©2018 Great Minds®. eureka-math.org

b. Write your own word problem to correspond to the tape diagram, and then solve.

Patti's sandals weigh 1,167 grams. She bought 3 pairs, all different colors! All 3 pairs of sandals together weigh 239 grams more than her winter boots. What is the weight of Patti's winter boots?

Patti's winter boots weigh 3,262 grams.

Responses will vary. Guide students with a context for creating a problem, such as the number of students who attend two schools or the weights of objects.

Problem Set

Please note that the Problem Set for Lesson 12 comprises the problems from the Concept Development, as stated in the introduction of the lesson.

Student Debrief (13 minutes)

Lesson Objective: Solve two-step word problems, including multiplicative comparison.

The Student Debrief is intended to invite reflection and active processing of the total lesson experience.

Invite students to review their solutions for the Problem Set. They should check work by comparing answers with a partner before going over answers as a class. Look for misconceptions or misunderstandings that can be addressed in the Debrief. Guide students in a conversation to debrief the problems and process the lesson.

EUREKA MATH

Any combination of the questions below may be used to lead the discussion.

- How was Problem 1 similar to the other problems we did today? How was it different?

- How was setting up Problem 2 similar to setting up Problem 3? At what point did the two problems become quite different?

- What piece of information did you need to know to solve Problem 2 that was not given to you in the problem?

- Share the word problem you created for Problem 4(b) with your partner. Solve your partner's problem. Explain the strategy you used to solve it.

Exit Ticket (3 minutes)

After the Student Debrief, instruct students to complete the Exit Ticket. A review of their work will help with assessing students' understanding of the concepts that were presented in today's lesson and planning more effectively for future lessons. The questions may be read aloud to the students.

Note: This fluency activity reviews the Concept Development from Lessons 10 and 11.

　　T: (Write 773 × 2.) On your personal white board, solve the expression using the standard algorithm.

Repeat the process for the following possible sequence: 147 × 3, 1,605 × 3, and 5,741 × 5.

Concept Development (35 minutes)

Materials: (S) Problem Set

Note: For this lesson, the Problem Set comprises word problems from the Concept Development and is therefore to be used during the lesson itself.

Students may work in pairs to solve Problems 1–4 below using the RDW approach to problem solving.

> **NOTES ON**
> **MULTIPLE MEANS**
> **OF REPRESENTATION:**
>
> Depending on English language learners' needs, it may be helpful to provide today's Problem Set in students' first language.

1. Model the problem.

Have two pairs of students who can be successful with modeling the problem work at the board while the others work independently or in pairs at their seats. Review the following questions before beginning the first problem.

- Can you draw something?
- What can you draw?
- What conclusions can you make from your drawing?

As students work, circulate. Reiterate the questions above.

After two minutes, have the two pairs of students share *only* their labeled diagrams.

For about one minute, have the demonstrating students receive and respond to feedback and questions from their peers.

2. Calculate to solve and write a statement.

Give everyone two minutes to finish work on that question, sharing work and thinking with a peer. All should then write their equations and statements of the answer.

3. Assess the solution.

Give students one to two minutes to assess the solutions presented by their peers on the board, comparing the solutions to their own work. Highlight alternative methods to reach the correct solution.

> **NOTES ON MULTIPLE MEANS OF ENGAGEMENT:**
>
> Extend the problems for students working above grade level.
>
> Problem 1: If Kate also deposited $36 of each paycheck into her savings, how much money does she have left to spend after buying the computer and clothes?
>
> Problem 2: Construct a graph or chart that shows Sylvia's weight over the years.
>
> Problem 3: Use classroom resources to find out about how many kilograms the crate of apples weighed.

Problem 1

Over the summer, Kate earned $180 each week for 7 weeks. Of that money, she spent $375 on a new computer and $137 on new clothes. How much money did she have left?

This multi-step problem requires students to apply their knowledge of multiplication of a multi-digit number by a single-digit number. While most students may apply the multiplication algorithm, they should be encouraged to use whichever strategy they are most comfortable with to complete the multiplication. The sum of $375 and $137 may be found before subtracting it from Kate's total salary, or the two amounts may be subtracted separately.

180   Lesson 13:   Use multiplication, addition, or subtraction to solve multi-step word problems.

©2018 Great Minds®. eureka-math.org

EUREKA MATH™

Problem 2

Sylvia weighed 8 pounds when she was born. By her first birthday, her weight had tripled. By her second birthday, she had gained 12 more pounds. At that time, Sylvia's father weighed 5 times as much as she did. What was Sylvia and her dad's combined weight?
In this problem, students need to compute Sylvia's weight at two separate points in time. Some students may gravitate to calculations. Others may use tape diagrams or other models to represent the problem. Either is acceptable. Then, they may multiply Sylvia's current weight by 6 to find her and her father's combined weight.

> **NOTES ON MULTIPLE MEANS OF ACTION AND EXPRESSION:**
>
> Learners differ in their solution strategies, and classroom discussion is enriched with the sharing of diverse, innovative, efficient, and thoughtful solutions.
>
> Students may choose to omit the modeling part of a multi-step problem. For example, the work to the left does not show the tripling of 8. Therefore, the sharing of student work when solving multi-step problems can be even more interesting.
>
> It is best to be prepared to model each step of the problem since students may be overwhelmed by the simplest words when they are embedded within a multi-step problem.

Problem 3

Three boxes weighing 128 pounds each and one box weighing 254 pounds were loaded onto the back of an empty truck. A crate of apples was then loaded onto the same truck. If the total weight loaded onto the truck was 2,000 pounds, how much did the crate of apples weigh?
This multi-step problem may be modeled or simply solved using algorithms. Students need to recognize that 128 must be tripled before that total is added to 254. To arrive at the answer to the problem, this new sum must be subtracted from 2,000, requiring students to use a simplifying strategy or to regroup across multiple zeros (a skill they mastered in Module 1).

EUREKA MATH™

Lesson 13: Use multiplication, addition, or subtraction to solve multi-step word problems.

©2018 Great Minds®. eureka-math.org

181

Problem 4

In one month, Charlie read 814 pages. In the same month, his mom read 4 times as many pages as Charlie, and that was 143 pages more than Charlie's dad read. What was the total number of pages read by Charlie and his parents?
Solution A:

Solution B:

In this multi-step problem, students may find that each calculation is dependent upon the following calculation. Encourage students to use simplifying strategies when solving, such as seeing in the model that there are 9 equal-size rectangles worth 814 pages, minus 143 pages.

Problem Set

Please note that the Problem Set for Lesson 13 comprises the problems from the Concept Development, as stated in the introduction.

Student Debrief (13 minutes)

Lesson Objective: Use multiplication, addition, or subtraction to solve multi-step word problems.

The Student Debrief is intended to invite reflection and active processing of the total lesson experience.

Invite students to review their solutions for the Problem Set. They should check work by comparing answers with a partner before going over answers as a class. Look for misconceptions or misunderstandings that can be addressed in the Debrief. Guide students in a conversation to debrief the Problem Set and process the lesson.

EUREKA MATH™

Any combination of the questions below may be used to lead the discussion.

- Explain to your partner how you solved Problem 1. If you used different strategies, discuss how you arrived at the same answer.

- Let's look at how two different students modeled Problem 2. How are they similar? How are they different?

- Student A, in Problem 4, why did you multiply 814 by 9 and subtract 143? From the model, I only see 5 units of 814. (Also, draw out the alternate strategies from Problem 3.)

- Student B, would you present your solution? (Student presents.) Does anyone have comments or questions for Student B?

- How did you know what to do when you saw the word *tripled* in Problem 2?

- When might it be better to use multiplication rather than addition?

- What are the advantages of knowing several methods for solving a multiplication problem?

Exit Ticket (3 minutes)

After the Student Debrief, instruct students to complete the Exit Ticket. A review of their work will help with assessing students' understanding of the concepts that were presented in today's lesson and planning more effectively for future lessons. The questions may be read aloud to the students.

Lesson 13:   Use multiplication, addition, or subtraction to solve multi-step word problems.

Name _____   Date _____

1. Draw an area model to solve the following. Find the value of the following expressions.

   a. 30×60

   b. 3×269

2. Use any place value strategy to multiply.

   a. 3×68

   b. 4×371

   c. $7 \times 1,305$

   d. $6,034 \times 5$

Solve using a model or equation. Show your work and write your answer as a statement.

3. A movie theater has two rooms. Room A has 9 rows of seats with 18 seats in each row. Room B has three times as many seats as Room A. How many seats are there in both rooms?

4. The high school art teacher has 9 cases of crayons with 52 boxes in each case. The elementary school art teacher has 6 cases of crayons with 104 boxes in each case. How many total boxes of crayons do both teachers have? Is your answer reasonable? Explain.

5. Last year, Mr. Petersen's rectangular garden had a width of 5 meters and an area of 20 square meters. This year, he wants to make the garden three times as long and two times as wide.

   a. Solve for the length of last year's garden using the area formula. Then, draw and label the measurements of this year's garden.

   Last Year   **This Year**

   5 m | 20 square meters

   _____ m

   b. How much area for planting will Mr. Petersen have in the new garden?

c. Last year, Mr. Petersen had a fence all the way around his garden. He can reuse all of the fence he had around the garden last year, but he needs to buy more fencing to go around this year's garden. How many more meters of fencing is needed for this year's garden than last year's?

d. Last year, Mr. Petersen was able to plant 4 rows of carrots with 13 plants in each row. This year, he plans to plant twice as many rows with twice as many carrot plants in each. How many carrot plants will he plant this year? Write a multiplication equation to solve. Assess the reasonableness of your answer.

EUREKA
MATH™

Use the four operations with whole numbers to solve problems.

- Interpret a multiplication equation as a comparison, e.g., interpret 35 = 5 × 7 as a statement that 35 is 5 times as many as 7 and 7 times as many as 5. Represent verbal statements of multiplicative comparisons as multiplication equations.

- Multiply or divide to solve word problems involving multiplicative comparison, e.g., by using drawings and equations with a symbol for the unknown number to represent the problem, distinguishing multiplicative comparison from additive comparison.

- Solve multistep word problems posed with whole numbers and having whole-number answers using the four operations, including problems in which remainders must be interpreted. Represent these problems using equations with a letter standing for the unknown quantity. Assess the reasonableness of answers using mental computation and estimation strategies including rounding.

Use place value understanding and properties of operations to perform multi-digit arithmetic.

- Multiply a whole number of up to four digits by a one-digit whole number, and multiply two two-digit numbers, using strategies based on place value and the properties of operations. Illustrate and explain the calculation by using equations, rectangular arrays, and/or area models.

Solve problems involving measurement and conversion of measurements from a larger unit to a smaller unit.

- Apply the area and perimeter formulas for rectangles in real world and mathematical problems. *For example, find the width of a rectangular room given the area of the flooring and the length, by viewing the area formula as a multiplication equation with an unknown factor.*

Evaluating Student Learning Outcomes

A Progression Toward Mastery is provided to describe steps that illuminate the gradually increasing understandings that students develop *on their way to proficiency.* In this chart, this progress is presented from left (Step 1) to right (Step 4). The learning goal for students is to achieve Step 4 mastery. These steps are meant to help teachers and students identify and celebrate what the students CAN do now, and what they need to work on next.

A Progression Toward Mastery				
Assessment Task Item	**STEP 1** Little evidence of reasoning without a correct answer. (1 Point)	**STEP 2** Evidence of some reasoning without a correct answer. (2 Points)	**STEP 3** Evidence of some reasoning with a correct answer or evidence of solid reasoning with an incorrect answer. (3 Points)	**STEP 4** Evidence of solid reasoning with a correct answer. (4 Points)
1	The student is unable to complete both area models with correct calculations.	The student correctly solves one part using the area model.	The student correctly solves both parts but has an error in one of the area models, or the student represents both area models correctly but miscalculates for one part.	The student correctly completes all components—draws the area model for each problem with correct answers: a. 1,800 b. 807
2	The student is unable to solve more than one problem correctly.	The student correctly solves at least two of the four problems with evidence of some place value knowledge.	The student correctly solves at least three of the problems showing reasoning through a place value strategy, or the student correctly answers four problems, only showing solid reasoning for three problems.	The student correctly answers all parts, showing all work using area models, partial products, or the general method: a. 204 b. 1,484 c. 9,135 d. 30,170
3	The student answers incorrectly with little attempt at solving the problem.	The student attempts to use an equation or model, resulting in an incorrect answer.	The student solves the problem using an equation or model but with an incorrect answer, or the student answers correctly showing only some reasoning.	The student correctly answers 648 seats in an answer statement and uses an equation or model correctly to solve.

EUREKA MATH™

A Progression Toward Mastery				
4	The student answers incorrectly and provides little or no evidence of reasoning through estimation.	The student answers incorrectly but shows some evidence in reasoning through estimation.	The student correctly answers *1,092 boxes* using a model or equation accurately but is unable to clearly reason using estimation, or the student provides clear reasoning and an attempt at solving but provides an incorrect answer.	The student correctly answers *1,092 boxes* in an answer statement, uses an area model or equation to solve, and validates the reasonableness of his answer through estimation.
5	The student shows little to no reasoning and answers more than two parts incorrectly.	The student correctly answers two of four parts, showing little reasoning in Part (d) and little evidence of place value understanding.	The student answers three of the four parts correctly, or the student answers all four parts correctly with unclear reasoning in Part (d), or the student does not show solid evidence of place value understanding in all solutions.	The student correctly answers: a. 5 m × 4 m = 20 square meters and expresses length as 4 m; draws a rectangle; labels the width as 10 meters and length as 12 meters. b. 120 square meters. c. 26 meters. d. 208 plants; shows a written equation and reasons correctly through estimation.

\end{array}
$$

EUREKA MATH

Solve using a model or equation. Show your work and write your answer as a statement.

3. A movie theater has two rooms. Room A has 9 rows of seats with 18 seats in each row. Room B has three times as many seats as Room A. How many seats are there in both rooms?

9x18

A   162

B   162

18   162   486
x 9   x 3   + 162
162   486   648
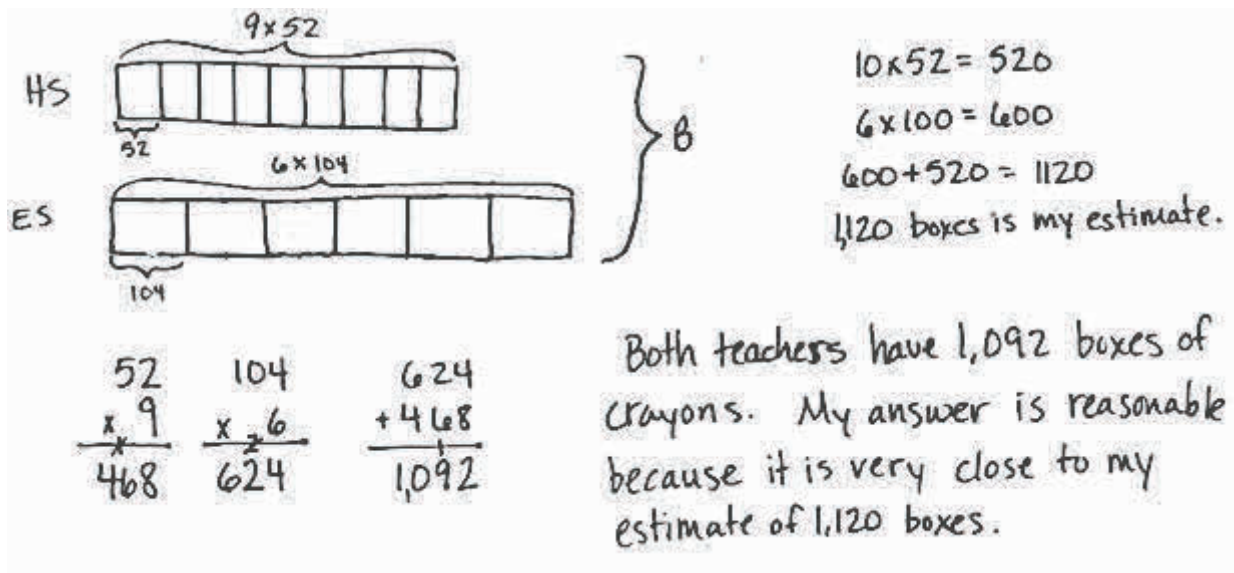

There are 648 seats in
both rooms.

4. The high school art teacher has 9 cases of crayons with 52 boxes in each case. The elementary school art teacher has 6 cases of crayons with 104 boxes in each case. How many total boxes of crayons do both teachers have? Is your answer reasonable? Explain.

9x52

HS

52

6 x 104

ES

104

10x52= 520
6x100= 600
600+520= 1120
1120 boxes is my estimate.

52   104   624
x 9   x 6   + 468
468   624   1,092

Both teachers have 1,092 boxes of
crayons. My answer is reasonable
because it is very close to my
estimate of 1,120 boxes.

5. Last year, Mr. Petersen's rectangular garden had a width of 5 meters and an area of 20 square meters. This year, he wants to make the garden three times as long and two times as wide.

   a. Solve for the length of last year's garden using the area formula. Then, draw and label the measurements of this year's garden.

Last Year

5 m | 20 square meters

___4___ m

$A = l \times w$

$20 = l \times 5$

$20 = 4 \times 5$

The length of last year's garden is 4 meters.

This Year

10 m

5m x 2 = 10m

12 m

4m x 3 = 12m

This year's garden has a width of 10 meters and a length of 12 meters.

   b. How much area for planting will Mr. Petersen have in the new garden?

$A = l \times w$

$= 12 \times 10$

$= 120$

Mr. Petersen's new garden has an area of 120 square meters.

EUREKA MATH™

c. Last year, Mr. Petersen had a fence all the way around his garden. He can reuse all of the fence he had around the garden last year, but he needs to buy more fencing to go around this year's garden. How many more meters of fencing is needed for this year's garden than last year's?

$P = 2(l+w)$
$= 2(4+5)$
$= 2 \times 9$
$= 18$

$P = 2(12+10)$
$= 2(22)$
$= 2 \times 22$
$= 44$

$\begin{array}{r} 3\,4 \\ \cancel{4}\cancel{4} \\ -\ 18 \\ \hline 26 \end{array}$

This year's garden will need 26 more meters of fencing.

d. Last year, Mr. Petersen was able to plant 4 rows of carrots with 13 plants in each row. This year, he plans to plant twice as many rows with twice as many carrot plants in each. How many carrot plants will he plant this year? Write a multiplication equation to solve. Assess the reasonableness of your answer.

$8 \times 26 \approx 8 \times 25$
$8 \times 25 = 200$

$\begin{array}{r} 26 \\ \times\ \ 8 \\ \hline 208 \end{array}$

He will plant 208 carrot plants this year. My answer is reasonable because it is very close to my estimate of 200 plants.

Topic E

Division of Tens and Ones with Successive Remainders

Focus Standard:	■	Find whole-number quotients and remainders with up to four-digit dividends and one-digit divisors, using strategies based on place value, the properties of operations, and/or the relationship between multiplication and division. Illustrate and explain the calculation by using equations, rectangular arrays, and/or area models.
Instructional Days:	8	
Coherence -Links from:	G3–M1	Properties of Multiplication and Division and Solving Problem with Units of 2–5 and 10
-Links to:	G3–M3	Multiplication and Division with Units of 0, 1, 6–9, and Multiples of 10
	G5–M2	Multi-Digit Whole Number and Decimal Fraction Operations

In Topic E, students synthesize their Grade 3 knowledge of division types (*group size unknown* and *number of groups unknown*) with their new, deeper understanding of place value.
Students focus on interpreting the remainder within division problems both in word problems and long division. A remainder of 1, as exemplified below, represents a leftover flower in the first situation and a remainder of 1 ten in the second situation.[1]

---

[1]Note that care must be taken in the interpretation of remainders. Consider the fact that 7 ÷ 3 is not equal to 5 ÷ 2 because the remainder of 1 is in reference to a different whole amount ($2\frac{1}{3}$ is not equal to $2\frac{1}{2}$).

EUREKA MATH™

A remainder of 1 flower.

7 Flowers ÷ 2
There are 3 flowers in
each vase.
There is 1 flower
remaining.

A remainder of 1 ten.

7 tens ÷ 2
There are 3 tens in
each group.
There is 1 ten remaining.

While we have no reason to subdivide a remaining flower, there are good reasons to subdivide a remaining ten. Students apply this simple idea to divide two-digit numbers unit by unit: dividing the tens units first, finding the remainder (the number of tens unable to be divided), and decomposing remaining tens into ones to then be divided.

Lesson 14 begins Topic E by having students solve division word problems involving remainders. In Lesson 15, students deepen their understanding of division by solving problems with remainders using both arrays and the area model. Students practice dividing two-digit dividends with a remainder in the ones place using place value disks in Lesson 16 and continue that modeling in Lesson 17 where the remainder in the tens place is decomposed into ones.

The long division algorithm[2] is introduced in Lesson 16 by directly relating the steps of the algorithm to the steps involved when dividing using place value disks. Introducing the algorithm in this manner helps students to understand how place value plays a role in the steps of the algorithm. The same process of relating the standard algorithm to the concrete representation of division continues in Lesson 17.

Lesson 18 moves students to the abstract level by requiring them to solve division problems numerically without drawing. In Lesson 19, students explain the successive remainders of the algorithm by using place value understanding and place value disks. Finally, in Lessons 20 and 21, students use the area model to solve division problems and then compare the standard algorithm to the area model. Lesson 20 focuses on division problems without remainders, while Lesson 21 involves remainders.
Quotients and remainders are independent of each other but must both be included to give a complete response. A quotient and a remainder cannot be recorded after an equal sign because the symbol R or the words *with a remainder of* are invalid in an equation. Therefore, a quotient and a remainder can be written as a statement such as *seven divided by two is three with a remainder of one,* or *the quotient is three and the remainder is one.* It is mathematically correct to record the quotient and the remainder together at the top of the long division algorithm.

---

[2]Students become fluent with the standard division algorithm in Grade 6. For adequate practice in reaching fluency, students are introduced to, but not assessed on, the division algorithm in Grade 4 as a general method for solving division problems.

A Teaching Sequence Toward Mastery of Division of Tens and Ones with Successive Remainders

Objective 1: Solve division word problems with remainders.
(Lesson 14)

Objective 2: Understand and solve division problems with a remainder using the array and area models.
(Lesson 15)

Objective 3: Understand and solve two-digit dividend division problems with a remainder in the ones place by using place value disks.
(Lesson 16)

Objective 4: Represent and solve division problems requiring decomposing a remainder in the tens.
(Lesson 17)

Objective 5: Find whole number quotients and remainders.
(Lesson 18)

Objective 6: Explain remainders by using place value understanding and models.
(Lesson 19)

Objective 7: Solve division problems without remainders using the area model.
(Lesson 20)

Objective 8: Solve division problems with remainders using the area model.
(Lesson 21)

EUREKA MATH™

Lesson 14

Objective: Solve division word problems with remainders.

Suggested Lesson Structure

■ Application Problem   (8 minutes)
■ Fluency Practice   (12 minutes)
■ Concept Development   (32 minutes)
■ Student Debrief   (8 minutes)

   Total Time   **(60 minutes)**
Application Problem (8 minutes)

Tyler planted potatoes, oats, and corn. He planted 23 acres of potatoes. He planted 3 times as many acres of oats as potatoes, and he planted 4 times as many acres of corn as oats. How many acres did Tyler plant with potatoes, oats, and corn in all?

Note: This Application Problem reviews the objective of Lesson 13: *Use multiplication, addition, or subtraction to solve multi-step word problems*. It precedes the Fluency Practice and Concept Development as a review of multiplication skills prior to work with division in Grade 4, which starts in this lesson.

> **NOTES ON**
> **MULTIPLE MEANS**
> **OF REPRESENTATION:**
>
> English language learners and others may benefit from a brief explanation of the term *acre.*
Fluency Practice (12 minutes)

- Group Count to Divide   (4 minutes)
- Number Sentences in an Array   (4 minutes)
- Divide with Remainders   (4 minutes)

Group Count to Divide (4 minutes)

Note: This fluency activity prepares students to divide with remainders during this lesson's Concept Development.

T: (Write 8 ÷ 2 = ___.) Let's find the quotient, counting by twos. Show a finger for each multiple you count by.

S: 2 (show 1 finger), 4 (show 2 fingers), 6 (show 3 fingers), 8 (show 4 fingers).

T: What's 8 ÷ 2?

S: 8 ÷ 2 = 4.

Continue with the following possible sequence: 12 ÷ 2, 18 ÷ 2, 14 ÷ 2, 15 ÷ 5, 25 ÷ 5, 40 ÷ 5, 30 ÷ 5, 9 ÷ 3, 15 ÷ 3, 27 ÷ 3, 21 ÷ 3, 16 ÷ 4, 24 ÷ 4, 32 ÷ 4, and 36 ÷ 4.

Number Sentences in an Array (4 minutes)

Materials: (S) Personal white board

Note: This fluency activity prepares students for Lesson 15's Concept Development.

T: (Project a 3 × 4 array.) How many boxes do you see altogether?

S: 12.

T: Let's count by threes to check. (Point at columns as students count.)

S: 3, 6, 9, 12.

T: Let's count by fours to check. (Point at rows as students count.)

S: 4, 8, 12.

T: On your personal white board, write two multiplication sentences to show how many boxes are in this array.

S: (Write 3 × 4 = 12 and 4 × 3 = 12.)

T: (Write 12 ÷ ___ = ___ . Write 12 ÷ ___ = ___.) Write two division sentences for this array.

S: (Write 12 ÷ 3 = 4 and 12 ÷ 4 = 3.)
Continue with the following possible sequence: 5 × 2 array and 7 × 3 array.

Divide with Remainders (4 minutes)

Note: This fluency activity prepares students for this lesson's Concept Development.

T: How many groups of 2 are in 10?

S: 5.

T: Let's prove it by counting by twos. Use your fingers as you count.

S: (Show one finger for each multiple.) 2, 4, 6, 8, 10.

T: Show and say how many groups of 2 are in 10.

S: (Show 5 fingers.) 5.

T: (Write 11 ÷ 2.) Let's find out how many groups of 2 are in 11. Count with me.

S: (Show one finger for each multiple.) 2, 4, 6, 8, 10.

T: How many groups?

S: 5.

T: How many left?

S: 1.

Continue with the following possible sequence: 8 ÷ 4 and 9 ÷ 4, 12 ÷ 3 and 13 ÷ 3, 15 ÷ 5 and 17 ÷ 5, 20 ÷ 4 and 23 ÷ 4, and 50 ÷ 10 and 55 ÷ 10.

Concept Development (32 minutes)

Materials: (S) Personal white board

Problem 1: Divide a two-digit number by a one-digit number modeled with an array.

There are 12 students in PE class separated into 4 equal teams. How many students are on each team?

T: Read the problem, and draw an array to represent the division.

S: (Draw an array as pictured below to the right.)

T: Tell me a division expression that matches the situation.

S: 12 ÷ 4.

T: What is the quotient?

S: The quotient is 3.

T: How many students are on each team?

S: There are 3 students on each team.

T: How can you check to make sure your division was correct?

S: I can count by three 4 times to get 12. → I can multiply 3 times 4 to get 12.

T: Does this quotient tell us the size of the group or the number of groups?

S: The size of the group.

T: Let's revise the story a bit. Again, there are 12 students in PE class, but now 3 students are needed on each team. How many teams can be made? (Point to the same array.) What is the division expression for this new story?

> **NOTES ON MULTIPLE MEANS OF REPRESENTATION:**
>
> Some learners may want to model 12 ÷ 4 as a tape diagram. At times, autonomy, creativity, and diversity are celebrated in modeling; in this case, however, a specific instructional model for representing the quotient and the remainder has been chosen. This model could also be represented concretely by having the students in the class simulate the actions of the students in Problems 1 and 2.

There are 3 students on each team.

12 ÷ 4 = 3

3 × 4 = 12

-or-

There are 4 teams of 3 students.

12 ÷ 3 = 4

4 × 3 = 12
S: 12 ÷ 3.

T: Does the quotient tell us the size of the group or the number of groups?

S: The number of groups.

T: The same array can represent a situation with the group size unknown or the number of groups unknown.

Problem 2: Divide a two-digit number by a one-digit number with a remainder modeled with an array.

13 ÷ 4

T: One more student joined the class described at the beginning of Problem 1. There are now 13 students to be divided into 4 equal teams. Draw an array to find how many students are on each team. What did you find?

S: I can represent 13 in four groups. → Four groups of 3 make 12, but I have 1 left over. → One student won't be on a team.

T: Tell me an expression to represent this problem.

S: 13 ÷ 4.

T: When we divide a number into equal groups, sometimes there is an amount leftover. We call the number that we have left a **remainder**.

T: What is the quotient?

S: The quotient is 3.

T: What is the amount left over, the remainder?

S: 1.

T: We state our answer by saying the quotient and then the remainder. The quotient is 3. The remainder is 1. We can also say or write, "The quotient is 3 with a remainder of 1."

T: Discuss with your partner how you can use multiplication to check your work for this answer.

S: Four threes is 12. That doesn't prove our answer is right. → We can add the remainder to the product. Four times 3 is 12. Add 1 to get 13.

T: Let's return again to a second story. There are 13 students in PE class. Exactly 3 students are needed on each team. How many teams can be made?

T: Tell me the new expression.

S: 13 ÷ 3.

T: State the quotient and remainder.

T: The quotient is 4, and the remainder is 1.

> **A NOTE ON THE RECORDING OF QUOTIENTS AND REMAINDERS:**
>
> When writing 13 ÷ 4 = 3 R1, one may conclude that since 7 ÷ 2 = 3 R1, the following must be true: 7 ÷ 2 = 13 ÷ 4. However, this translates into $3\frac{1}{2} = 3\frac{1}{3}$, which is a false number sentence. To avoid this incorrect use of the equal sign and the misconceptions it creates, the remainder is stated separately from the quotient, and the R notation directly following the equal sign is not used.

13 ÷ 4
There are 3 in each group with 1 remaining.
The quotient is 3.
The remainder is 1.

13 ÷ 3
There are 4 groups with 1 remaining.
The quotient is 4.
The remainder is 1.

13
12   1
1×3
4×3=12
12+1 = 13

Lesson 14:   Solve division word problems with remainders.

EUREKA MATH™

©2018 Great Minds®. eureka-math.org

T: Talk to your partner. What do the quotient and the remainder mean in the second story?

S: Four teams can be made, and there is 1 extra person.

Draw the number bond as shown, and have students compare it with the quotient and the remainder. Notice the part on the left represents the equal groups, and the part on the right is the remainder.

Problem 3: Divide a two-digit number by a one-digit number with a remainder modeled with a tape diagram.

Kristy bought 13 roses. If she puts 6 roses in each vase, how many vases will she use? Will there be any roses left over?

T: Draw an array. Solve for 13 ÷ 6.

S: I can't because 13 is an odd number, and 6 + 6 = 12. An even number plus an even number won't give you an odd number. → You can divide by 6, but there will be 1 extra flower left over. → I can fill 2 vases and have 1 flower left over.

T: Tell your partner a statement that tells the quotient and remainder for this problem.

S: The quotient is 2, and the remainder is 1.

T: Describe to your partner what that statement tells us.

S: We started with 13 and made groups of 6. We made 2 groups with 1 rose remaining. → Kristy can fill 2 vases. She will have 1 rose left over.

T: Again, let's revise our story a bit. Now, Kristy bought 13 roses and wants to put them equally in 2 vases. How many roses will be in each vase? Is this the same array?

S: Yes.

T: Talk to your partner. How has our interpretation of the array changed?

S: In the first story, we didn't know the number of vases. In the second story, we didn't know the number in each vase. → We changed the story from finding the number of groups to finding the size of the group.

T: How can we check our work for both situations?

S: We can draw a number bond to show 2 groups of 6, and then 1 more. → Two times 6 is 12, and 12 plus 1 is 13.

T: Let's turn our array into a tape diagram to show 13 in 2 groups of 6 with a remainder of 1. (Demonstrate.)

T: Using the array, draw a rectangle around the flowers. Erase the flowers, and label the diagram.

S: You should divide the bar into two parts. I know each part is worth 6, but 6 plus 6 isn't 13.

13 ÷ 6   Kristy will use 2 vases.
          There will be 1 rose left over.

          or

13 ÷ 2   There will be 6 roses in each vase.
          There will be 1 rose left over.

2×6

2×6=12
12+1=13

13

6   6
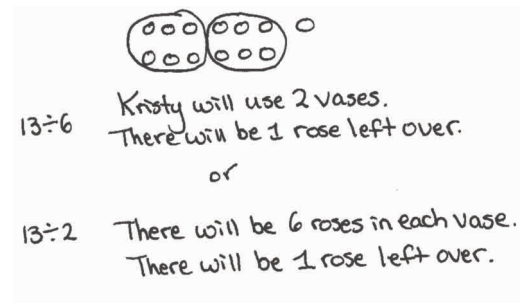

remainder of 1

T: Our tape diagram must have a third part to represent the remainder. Let's separate the bar into two equal parts and make a very small third part. Shade to show the remaining flower. (Demonstrate.)

T: With your partner, draw a tape diagram to show 13 roses divided equally into 4 vases.

Students draw a tape diagram, dividing it into four parts. Using their basic facts, they know 13 cannot be divided into four equal parts. They shade a fifth part of the tape diagram to show the remainder.

S: The quotient is 3. The remainder is 1. → We can check our work by drawing a number bond and adding the parts or multiplying 4 times 3 and adding 1. Whatever method we use, we get back to the original total when our quotient and remainder are correct.
T: Look at your tape diagram. Is the model the same when we don't know the number of groups, when we know that there are 3 flowers in each vase, but we don't know the number of vases?

S: Yes!

Problem 4: Divide a two-digit number by a one-digit number, interpreting the remainder.

Allison has 22 meters of fabric to sew dresses. She uses 3 meters of fabric for each dress. After how many dresses will Allison need to buy more fabric?

T: Let's represent this problem using a tape diagram together. (Model for the students as you talk.) We don't know the number of groups or the number of dresses she will make. We know each dress uses 3 meters, so let's draw one group and label it as *fabric for 1 dress.* We don't know how many dresses she can make or how many threes there are, so we label that with a question mark. We do know there will be a remainder because we know our facts of 3. 22 isn't a multiple of 3. Solve this problem.
S: Twenty-two divided by 3 is 7 with a remainder of 1.

T: With your partner, discuss your answer to the question. After how many dresses will Allison need to buy more fabric?

S: Well, she can make 7 dresses. I guess she'll have only 1 meter to make her next dress. → No, the problem says she must have 3 meters of fabric for each dress, so after 7 dresses she will have to buy more fabric. → She can make 7 dresses, but to make an eighth dress, she will need to buy 2 more meters of fabric. I can prove that my tape diagram is correct by drawing an array. See, there are 7 threes. Each group represents 1 dress. That means that there are 7 dresses. The 1 left over means that to make the eighth dress, she will need 2 more meters. I can see that by looking at the array.

EUREKA
MATH™

Problem Set (10 minutes)

Students should do their personal best to complete the Problem Set within the allotted 10 minutes. For some classes, it may be appropriate to modify the assignment by specifying which problems they work on first. Some problems do not specify a method for solving. Students should solve these problems using the RDW approach used for Application Problems.

Student Debrief (8 minutes)

Lesson Objective: Solve division word problems with remainders.

The Student Debrief is intended to invite reflection and active processing of the total lesson experience.

Invite students to review their solutions for the Problem Set. They should check work by comparing answers with a partner before going over answers as a class. Look for misconceptions or misunderstandings that can be addressed in the Debrief. Guide students in a conversation to debrief the Problem Set and process the lesson.
Any combination of the questions below may be used to lead the discussion.

- In Problem 3, there are 2 extra chairs. How can the **remainder** help you to find how many more chairs are needed to set up 1 more complete table?
- In Problem 4, how many full days of baking can be done? How much more flour is needed to bake on the sixth day?
- In Problem 6, 45 ÷ 7 equals 6 with a remainder of 3. What do the quotient and remainder represent in this problem? If 6 vans are full with 3 people remaining, why do we need 7 vans? Does the quotient always give the final answer? Why is it important to think carefully about the remainder? How would a model support your answer of 7 vans?
- How does an array help you to determine a remainder? Use the problems 12 ÷ 3, 13 ÷ 3, and 13 ÷ 2 in your conversation. How do the arrays with the whole 12 and 13 differ?

EUREKA MATH™

©2018 Great Minds®. eureka-math.org

- ▪ What complications are there in modeling a division problem with a remainder using a tape diagram?
- ▪ What new math vocabulary did we use today to communicate precisely?

Exit Ticket (3 minutes)

After the Student Debrief, instruct students to complete the Exit Ticket. A review of their work will help with assessing students' understanding of the concepts that were presented in today's lesson and planning more effectively for future lessons. The questions may be read aloud to the students.

Name _____ Date _____

Use the RDW process to solve the following problems.

1. There are 19 identical socks. How many pairs of socks are there? Will there be any socks without a match? If so, how many?
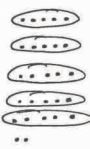

2. If it takes 8 inches of ribbon to make a bow, how many bows can be made from 3 feet of ribbon (1 foot = 12 inches)? Will any ribbon be left over? If so, how much?

3. The library has 27 chairs and 5 tables. If the same number of chairs is placed at each table, how many chairs can be placed at each table? Will there be any extra chairs? If so, how many?

EUREKA
MATH™

4. The baker has 42 kilograms of flour. She uses 8 kilograms each day. After how many days will she need to buy more flour?
5. Caleb has 76 apples. He wants to bake as many pies as he can. If it takes 8 apples to make each pie, how many apples will he use? How many apples will not be used?

6. Forty-five people are going to the beach. Seven people can ride in each van. How many vans will be required to get everyone to the beach?

EUREKA
MATH™

Name _____   Date _____

Use the RDW process to solve the following problem.

Fifty-three students are going on a field trip. The students are divided into groups of 6 students. How many groups of 6 students will there be? If the remaining students form a smaller group, and one chaperone is assigned to every group, how many total chaperones are needed?

Name _____   Date _____

Use the RDW process to solve the following problems.

1. Linda makes booklets using 2 sheets of paper. She has 17 sheets of paper. How many of these booklets can she make? Will she have any extra paper? How many sheets?

2. Linda uses thread to sew the booklets together. She cuts 6 inches of thread for each booklet. How many booklets can she stitch with 50 inches of thread? Will she have any unused thread after stitching up the booklets? If so, how much?

3. Ms. Rochelle wants to put her 29 students into groups of 6. How many groups of 6 can she make? If she puts any remaining students in a smaller group, how many students will be in that group?

EUREKA MATH™

4.   A trainer gives his horse, Caballo, 7 gallons of water every day from a 57-gallon container. How many days will Caballo receive his full portion of water from the container? On which number day will the trainer need to refill the container of water?

5.   Meliza has 43 toy soldiers. She lines them up in rows of 5 to fight imaginary zombies. How many of these rows can she make? After making as many rows of 5 as she can, she puts the remaining soldiers in the last row. How many soldiers are in that row?

6.   Seventy-eight students are separated into groups of 8 for a field trip. How many groups are there? The remaining students form a smaller group of how many students?

Lesson 15

Objective: Understand and solve division problems with a remainder using the array and area models.

Suggested Lesson Structure

■ Fluency Practice   (12 minutes)

■ Application Problem   (5 minutes)

■ Concept Development   (33 minutes)

■ Student Debrief   (10 minutes)

   Total Time   **(60 minutes)**
Fluency Practice (12 minutes)

- Show Values with Place Value Disks   (4 minutes)
- Divide with Remainders   (4 minutes)
- Number Sentences in an Array   (4 minutes)

Show Values with Place Value Disks (4 minutes)

Materials: (T) Thousands place value chart (Lesson 4 Template) (S) Personal white board, thousands place value chart (Lesson 4 Template)

Note: This fluency activity prepares students for Lesson 16's Concept Development.

    T: (Project the place value chart with 2 tens disks and 4 ones disks.) On your personal white board, write the number in standard form.

    S: (Write 24.)

Repeat process for 5 tens and 3 ones, 4 tens and 1 one, 3 tens and 11 ones, and 3 tens and 17 ones.

    T: (Write 32.) Say the number.

    S: 32.

    T: Show 32 using place value disks.

    S: (Draw disks for 3 tens and 2 ones.)

Continue with the following possible sequence: 21 and 43.

Divide with Remainders (4 minutes)

Note: This fluency activity provides maintenance of the fluency introduced in Lesson 14.

Repeat the process from Lesson 14 for the following possible sequence: $6 \div 2$ and $7 \div 2$; $24 \div 3$ and $25 \div 3$, $12 \div 4$ and $15 \div 4$, $18 \div 6$ and $21 \div 6$, and $45 \div 5$ and $49 \div 5$.

   Understand and solve division problems with a remainder using the array and area models.

EUREKA MATH™

Number Sentences in an Array (4 minutes)

Materials: (S) Personal white board

Note: This fluency activity prepares students for this lesson's Concept Development.

T: (Project a 5 × 3 + 1 array.) How many boxes do you see altogether?

S: 16.

T: Let's count by fives to check. (Point at columns as students count.)

S: 5, 10, 15.

T: Plus 1? (Point to the extra square outside of the rectangle.)

S: 16.

T: Count by threes to check.

S: 3, 6, 9, 12, 15.

T: Plus 1? (Point to the extra square outside of the rectangle.)

S: 16.

T: On your personal white board, write two multiplication number sentences to show how many boxes are in this array.

S: (Write (5 × 3) + 1 = 16 and (3 × 5) + 1 = 16.)

T: Write two division sentences for this array.

S: (Write 16 ÷ 3 = 5 with a remainder of 1 and 16 ÷ 5 = 3 with a remainder of 1.)
Repeat using the following possible sequence: (3 × 6) + 1 and (3 × 4) + 2.

Application Problem (5 minutes)

Chandra printed 38 photos to put into her scrapbook. If she can fit 4 photos on each page, how many pages will she use for her photos?

Note: This Application Problem relates to the objective of Lesson 14 in that students solve a division word problem with a remainder. Here, students interpret the remainder to determine the total number of scrapbook pages needed. This anticipates the last problem in this lesson.

**NOTES ON
MULTIPLE MEANS
OF REPRESENTATION:**

Modeling the array (rather than the tape diagram) may give students a clearer picture of the solution to the Application Problem. Encourage students to use the labels *photo* and *page,* if beneficial. Discuss how the equation informs the solution, yet the picture reveals the solution.
Lesson 15:   Understand and solve division problems with a remainder using the array and area models.

219

Concept Development (33 minutes)

Materials: (T/S) Square grid paper

Problem 1: Solve a division problem with and without a remainder using the area model.

Display 10 ÷ 2.

   T: Draw an array to represent 10 ÷ 2. Explain to your partner how
        you solved.

   S: (Draw.) I drew 2 circles and placed 10 dots evenly among the
        circles. → I drew 10 dots as 2 rows of 5 dots.

   T: Let's use grid paper to draw a rectangle with an area of 10 square
        centimeters and one side length of 2 centimeters. Tell your
        partner how we can find the unknown side length.

   S: The area is 10, so we know it is 5. → If the width is 2 centimeters,
        that means the length is 5 centimeters, and 2 centimeters times
        5 centimeters gives an area of 10 square centimeters. → We can
        count and mark off by twos until we get to 10.

   T: Discuss with your partner how the length of 5 centimeters is represented in the area model.

   S: The length is 5, and the quotient is 5. → The length of the area model represents the quotient of
        this division problem.
Display 11 ÷ 2.

   T: With your partner, discuss how you would draw an area model
        for 11 ÷ 2.

   S: Two can be the length or the width. → I can't just draw 2 rows of
        square units because of the remainder. → If I mark off 2 squares
        at a time, I count 2, 4, 6, 8, 10. I can't do another group of 2
        because it would be 12. There aren't enough.

   T: Eleven square centimeters is the total area. Let's draw a rectangle
        starting with a width of 2 centimeters. We'll continue lengthening
        it until we get as close to 11 square centimeters as we can.

   S: A length of 5 centimeters and width of 2 centimeters is as close as we can get to 11 square
        centimeters. → We can't do 2 × 6 because that's 12 square centimeters, and the total area is 11
        square centimeters.

   T: We can show a total area of 11 square centimeters by modeling 1 more square centimeter. The
        remainder of 1 represents 1 more square centimeter.

Repeat for 16 ÷ 3 and 23 ÷ 4.

Lesson 15:   Understand and solve division problems with a remainder using the
                  array and area models.

EUREKA
MATH™

©2018 Great Minds®. eureka-math.org
Problem 2: Solve a division problem using an array and the area model.

Display 38 ÷ 4.

T: In the Application Problem, you drew an array (pictured to the right) to solve. Represent the same problem using the area model on grid paper. (Allow two minutes to work.)

T: What do you notice about the array compared to the area model on graph paper?

S: The area model is faster to draw. Thirty-eight dots is a lot to draw. → There are the same number of dots and squares when I used graph paper. → Both get us the same answer of a quotient 9 with a remainder of 2.

T: Let's represent 38 ÷ 4 even more efficiently without grid paper since it's hard to come by grid paper every time you want to solve a problem.

T: (Give students one minute to draw.) Talk to your partner about how the array model and grid paper model supported you in drawing the rectangle with a given structure.

S: I knew the length was a little more than twice the width. → I knew that the remainder was half a column. → I knew that there was a remainder. It was really obvious with the array and grid paper.
Problem Set (10 minutes)

Students should do their personal best to complete the Problem Set within the allotted 10 minutes. For some classes, it may be appropriate to modify the assignment by specifying which problems they work on first. Some problems do not specify a method for solving. Students should solve these problems using the RDW approach used for Application Problems.

Student Debrief (10 minutes)

Lesson Objective: Understand and solve division problems with a remainder using the array and area models.

The Student Debrief is intended to invite reflection and active processing of the total lesson experience.

Invite students to review their solutions for the Problem Set. They should check work by comparing answers with a partner before going over answers as a class. Look for misconceptions or misunderstandings that can be addressed in the Debrief. Guide students in a conversation to debrief the Problem Set and process the lesson.

> **NOTES ON MULTIPLE MEANS OF REPRESENTATION:**
>
> Help English language learners distinguish between terms used for division: *division, divisor, quotient,* and *whole.* Label a division equation, and post for future reference. Make a word web of synonyms for division that students can interchange, if desired. Encourage students to speak these words as they participate in the Student Debrief.
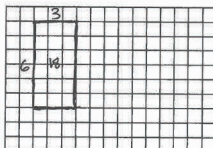

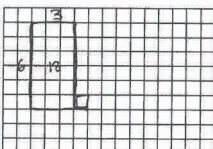

Any combination of the questions below may be used to lead the discussion.

- What does the quotient represent in the area model?
- When does the area model present a challenge in representing division problems?
- How can Problem 3 and Problem 4 have the same remainder?
- How could you change the 43 in Problem 5 so that there would be the same quotient but with no remainder?
- The quotient represents a side length. The remainder consists of square units. Why?
- How is the whole represented in an area model?
- What new math vocabulary did we use today to communicate precisely?
- How did the Application Problem connect to today's lesson?

Exit Ticket (3 minutes)

After the Student Debrief, instruct students to complete the Exit Ticket. A review of their work will help with assessing students' understanding of the concepts that were presented in today's lesson and planning more effectively for future lessons. The questions may be read aloud to the students.

Display 6 ÷ 3 on the board.

T: 6 ones represents what?

S: The whole. → The total. → What you are dividing.

T: Show 6 using place value disks. What is the number we are dividing by?

S: 3.

T: Let's assume it's telling us how many groups to make. Draw 3 groups below. Can we distribute 6 ones into 3 groups? Think of it like dealing cards evenly among 3 players. (Model as students follow along.) First, put one in each group. Cross off the ones one at a time as you distribute them evenly. Next, put another one in each group if you are able. Continue this until all of the ones are distributed.

S: We can put 2 ones in each group.

T: Are there any ones left over?

S: No.

T: How many ones are in each of our 3 groups?

S: 2 ones.

T: What is 6 ones ÷ 3? Give me the number sentence.

S: 6 ones ÷ 3 equals 2 ones.

T: Let's represent 6 ÷ 3 in a new way. Let's record the whole and the **divisor**. (Record with long division symbol as shown above.) Look back to your model. 6 ones divided by 3 is…?

S: 2 ones.

T: (Record 2 ones.)

T: (Point to the place value chart.) You distributed 2 ones 3 times. 2 ones times 3 is…?

S: 6 ones.

T: (Refer to the numbers carefully, pointing to 2 ones and the divisor, and recording 6 ones.)

T: (Point to the place value chart.) We divided 6 ones and have no ones remaining. 6 ones minus 6 ones equals 0 ones. (Write the subtraction line.) What does this zero mean?

S: There is no remainder. → All the ones were divided with none left over. → We subtracted the total number distributed from the total number of ones.

T: We can see the 3 groups of 2 both in our model and in our numbers and know our answer is correct since 3 times 2 equals 6.

![Eureka Math logo] Lesson 16: Understand and solve two-digit dividend division problems with a remainder in the ones place by using place value disks.

229

©2018 Great Minds®. eureka-math.org
Display 36 ÷ 3 on the board.

T: 3 tens and 6 ones represents what?

S: The whole.

T: Show 36 using place value disks. What is the number we are dividing by?

S: 3.

T: Make room for 3 groups below. Let's start dividing with the largest units. What is the largest unit?

S: The tens.

T: 3 tens divided by 3 is?

S: 1 ten.

T: Distribute the 3 tens, and cross them off to show they are now divided equally into the 3 groups.

T: Are there any tens left over?

S: No.

T: 6 ones divided by 3 is…?

S: 2 ones. We did that in the last problem. We distribute the ones evenly, one at a time, into each group. We cross off the ones, one at a time, as we distribute them.

T: Are there any ones left over?

S: No.

T: How many tens and ones are in each of our 3 groups?

S: 1 ten and 2 ones.

T: What is 36 ÷ 3?

S: 12.

T: Let's represent 36 ÷ 3 using numbers. Record the whole and the divisor.

T: Look back to your model. 3 tens divided by 3 is…?

S: 1 ten.

T: (Record 1 ten. Point to the place value chart.) You distributed 1 ten 3 times. Give a multiplication sentence that says that.

S: 1 ten times 3 equals 3 tens. (As students speak, refer to the algorithm.)

T: (Point to the place value chart.) How many tens are remaining to be distributed?

S: None. → Zero.

T: 3 tens minus 3 tens equals 0 tens. (Refer to the written problem.)

T: What of our whole amount remains to be divided?

S: 6 ones.
> **NOTES ON MULTIPLE MEANS OF ENGAGEMENT:**
>
> A student whose pace is ahead of the class may be engaged by journaling a response to the following:
>
> - Compare the quotients of 36 ÷ 3 and 6 ÷ 3. What do you notice?
> - Write three equations to check 36 ÷ 3 = 12.
> - Compare the models of division (i.e., array, area model, etc.).

Lesson 16:   Understand and solve two-digit dividend division problems with a remainder in the ones place by using place value disks.

©2018 Great Minds®. eureka-math.org

EUREKA MATH™

T: (Record 6 ones next to 0 tens.) Say a division sentence to divide 6 ones into 3 groups.

S: 6 ones divided by 3 equals 2 ones. (As students speak, refer to the problem.)

T: (Point to the place value chart.) You recorded 2 ones 3 times. Say a multiplication sentence that tells that.

S: 2 ones times 3 equals 6 ones. (As students speak, refer to the problem.)

T: (Point to the place value chart.) We started with 6 ones, distributed 6 ones, and have no ones remaining. Say a subtraction sentence for that.

S: 6 ones minus 6 ones equals 0 ones.

Have students notice the 3 groups of 12 and relate that to the checking equation of 3 twelves or 3 times 12.

Problem 2

  5 ones ÷ 4

4 tens 5 ones ÷ 4

Display 5 ÷ 4 on the board.

T: With your partner, represent the whole and the divisor, 4, on the place value chart, and record the written problem.

S: (Draw 5 ones and 4 groups below in the place value chart, and record the written problem.)

T: 5 ones divided by 4 equals?

S: It doesn't divide evenly. → I can place 1 one in each group, but I will have 1 one left over.

T: Distribute as many ones as you can, crossing off the ones you use. What is the quotient for 5 ones divided by 4?

S: 1 one.

T: Record your quotient numerically. Say a multiplication sentence for how many ones were distributed.

S: 1 one times 4 equals 4 ones.

T: Record 4 ones numerically and subtract.

S: 5 ones minus 4 ones is 1 one.

T: Record 1 one numerically. How many ones are remaining in the place value chart?

S: 1 one.

T: Circle 1 one. Tell your partner why 1 one is a remainder.

S: It is what is left over after we made our groups. → Our groups must be equal. If we put this 1 one into a group, the groups will not be equal.

T: Watch as I record the remainder numerically using *R1*.

Lesson 16:   Understand and solve two-digit dividend division problems with a
              remainder in the ones place by using place value disks.   **231**

©2018 Great Minds®. eureka-math.org
Display 45 ÷ 4 on the board.

T: Represent 45 using place value disks. Prepare to represent 45 ÷ 4 numerically.

T: 4 tens divided by 4 equals…?

S: 1 ten.

T: Cross off and distribute your tens below in each of the 4 groups. Record 1 ten in the tens column. Tell your partner the next numerical steps.

S: 1 ten times 4 is 4 tens. We subtract 4 tens from 4 tens and get 0 tens. We have 5 ones remaining, so we record those next to the 0 tens.

T: 5 ones divided by 4 equals…?

S: 1 one. → We can place 1 one in each group. But we will have 1 one remaining.

T: Distribute the disks, crossing off the 4 you use. Then, tell your partner how to record that using numbers.

S: 5 ones divided by 4 is 1 one. 1 one times 4 is 4 ones. 5 ones minus 4 ones is 1 one. Hey, we have 1 one left in the place value chart!

T: Correct. Circle that 1 one. It is your remainder. Show your partner how to record the remainder.

T: What is 45 ÷ 4?

S: 11 with a remainder of 1.

T: What do you notice about using numbers, or **long division**, and place value disks?

S: Both help us get to the same answer. → In the place value chart, we can see the remainder of 1. Then, we can write out all of the steps we did with the disks and still show the quotient of 11 and the remainder of 1. → We started with the largest units and went to the smallest with the disks and the numbers.
Problem 3

    8 ones ÷ 3

6 tens 8 ones ÷ 3

Display 8 ÷ 3 on the board.

T: Solve for 8 ÷ 3 using place value disks. Represent the problem using long division with your partner.

Circulate. Listen for students using place value as they divide, multiply, and subtract.

S: The quotient is 2 and the remainder is 2.

T: How do we use multiplication and addition to check our quotient and remainder in division?

S: Two times 3 is 6. Six plus 2 is 8. → We multiply the quotient times the divisor and add the remainder. → We multiply the number in each group by the number of groups and then add the remainder.

Lesson 16:   Understand and solve two-digit dividend division problems with a remainder in the ones place by using place value disks.

EUREKA MATH
Display 68 ÷ 3 on the board.

T: Solve for 68 ÷ 3 using place value disks. Represent the problem
     using numbers, or long division, with your partner.

S: I got 22 with a remainder of 2.

T: How can we check if 22 with a remainder of 2 is the correct
     answer?

S: We can multiply to check because we know that multiplication
     and division are related. → We can multiply 22 × 3 to check,
     and then we need to add 2.

T: 22 × 3 is…?

S: 66.

T: Plus 2?

S: 68. Our answer was right!

Problem Set (10 minutes)

Students should do their personal best to complete the
Problem Set within the allotted 10 minutes. For some
classes, it may be appropriate to modify the assignment
by specifying which problems they work on first. Some
problems do not specify a method for solving. Students
should solve these problems using the RDW approach
used for Application Problems.

Student Debrief (10 minutes)

Lesson Objective: Understand and solve two-digit
dividend division problems with a remainder in the ones
place by using place value disks.

The Student Debrief is intended to invite reflection and
active processing of the total lesson experience.

Invite students to review their solutions for the Problem
Set. They should check work by comparing answers with a
partner before going over answers as a class. Look for
misconceptions or misunderstandings that can be
addressed in the Debrief. Guide students in a
conversation to debrief the Problem Set and process the
lesson.

Any combination of the questions below may be used to lead the discussion.

- How did solving Problem 1 prepare you for solving Problem 2?

- Explain to your partner why only 6 ones could be distributed in Problem 3. What happens to the remaining ones?

- Solve 12 divided by 3. Solve 12 divided by 4. As a **divisor** gets larger, what will happen to the quotient if the whole stays the same?

- Was the remainder ever larger than the divisor? Why not?

- In the Problem Set, we only had remainders of 1 and 2. Give me an example of a problem that might have a larger remainder.

- Explain the connection between using place value disks and **long division**. Why do you think it is called long division?

- What new math vocabulary did we use today to communicate precisely?

Exit Ticket (3 minutes)

After the Student Debrief, instruct students to complete the Exit Ticket. A review of their work will help with assessing students' understanding of the concepts that were presented in today's lesson and planning more effectively for future lessons. The questions may be read aloud to the students.

Suggested Lesson Structure

■ Fluency Practice   (11 minutes)
■ Application Problem   (5 minutes)
■ Concept Development (34 minutes)
■ Student Debrief   (10 minutes)
 Total Time   **(60 minutes)**
Fluency Practice (11 minutes)

▪ Group Counting   (2 minutes)
▪ Divide Mentally   (4 minutes)
▪ Divide Using the Standard Algorithm (5 minutes)

Group Counting (2 minutes)

Note: This fluency activity prepares students to divide with remainders during the Concept Development.

Direct students to count forward and backward, occasionally changing the direction of the count.

> ▪ Twos to 20
> ▪ Threes to 30
> ▪ Fours to 40
> ▪ Fives to 50

Divide Mentally (4 minutes)

Note: This fluency activity reviews Lesson 16's content.

T: (Write 40 ÷ 2.) Say the completed division sentence in unit form.
S: 4 tens divided by 2 equals 2 tens.
T: (To the right, write 8 ÷ 2.) Say the completed division sentence in unit form.
S: 8 ones divided by 2 equals 4 ones.
T: (Above both equations, write 48 ÷ 2. Draw a number bond to connect the two original problems to this new problem.) Say the completed division sentence in unit form.

Lesson 17:   Represent and solve division problems requiring decomposing a remainder in the tens.

©2018 Great Minds®. eureka-math.org

243
S: 4 tens 8 ones divided by 2 equals 2 tens 4 ones.

T: Say the division sentence in standard form.

S: 48 divided by 2 equals 24.

Continue with the following possible sequence: 93 ÷ 3 and 88 ÷ 4.

Divide Using the Standard Algorithm (5 minutes)

Materials: (S) Personal white board

Note: This fluency activity reviews Lesson 16's content.
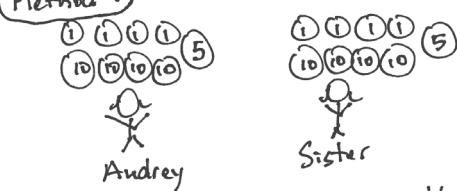

T: (Write 24 ÷ 2.) On your boards, solve the division problem using long division.

Continue with the following possible sequence: 36 ÷ 3, 37 ÷ 3, 55 ÷ 5, 57 ÷ 5, 88 ÷ 4, 87 ÷ 4, 96 ÷ 3, and 95 ÷ 3.

Application Problem (5 minutes)

Audrey and her sister found 9 dimes and 8 pennies. If they share the money equally, how much money will each sister get?
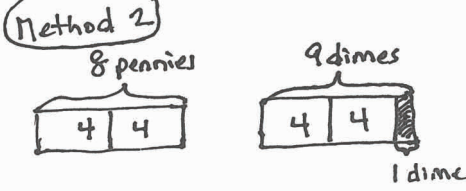

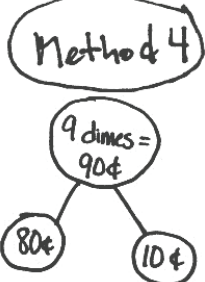

Note: This Application Problem reviews division of ones. Sharing 9 dimes connects to Problems 1 and 2 of today's Concept Development, asking students to decompose 1 ten for 10 ones.

Lesson 17:   Represent and solve division problems requiring decomposing a
                              remainder in the tens.

©2018 Great Minds®. eureka-math.org

EUREKA MATH™

Concept Development (34 minutes)

Materials: (T) Tens place value chart (Lesson 16 Template) (S) Personal white board, tens place value chart (Lesson 16 Template)

Problem 1: Divide two-digit numbers by one-digit numbers using place value disks, regrouping in the tens.

3 ones ÷ 2

3 tens ÷ 2

Display 3 ÷ 2 on the board.

    T: (Have students model on the place value chart.) 3 ones divided by 2 is…?

    S: One with a remainder of 1.

    T: Record 3 ÷ 2 as long division.

Students complete the problem. Encourage students to share the relationship of their model to the steps of the algorithm.
Display 30 ÷ 2 on the board.

    T: Using mental math, tell your partner the answer to 30 ÷ 2.

    S: Thirty divided by 2 is 15.

    T: Let's confirm your quotient. Represent 30 on the place value chart. Tell your partner how many groups below are needed.

    S: Two. (Draw.)

    T: 3 tens divided by 2 is…? Distribute your disks, and cross off what what's been distributed. The answer is…?

    S: 1 ten with a remainder of 1 ten. That's an interesting answer.

    T: Can we rename the leftover ten?

    S: Yes! Change 1 ten for 10 ones.

    T: Let's rename 1 ten. Now, rename and distribute the 10 ones with your partner.

    S: Our answer is 1 ten 5 ones, or 15.

    T: Why didn't we stop when we had a remainder of 1 ten?

    S: Because 1 ten is just 10 ones, and you can keep dividing.

    T: So, why did we stop when we got a remainder of 1 one?

    S: The ones are the smallest unit on our place value chart, so we stopped there and made a remainder.

    T: Let's solve 30 ÷ 2 using long division.

    T: 3 tens divided by 2?

    S: 1 ten.

EUREKA MATH™   **Lesson 17:**   Represent and solve division problems requiring decomposing a remainder in the tens.   **245**

©2018 Great Minds®. eureka-math.org

T: (Record 1 ten. Point to the place value chart.) You recorded 1 ten, twice. Say a multiplication equation that tells that.

S: 1 ten times 2 equals 2 tens.

As students say the multiplication equation, refer to the problem, pointing to 1 ten and the divisor, and record 2 tens.

T: (Point to the place value chart.) We started with 3 tens, distributed 2 tens, and have 1 ten remaining. Tell me a subtraction equation for that.

S: 3 tens minus 2 tens equals 1 ten.

As students say the subtraction equation, refer to the problem, pointing to the tens column, drawing a subtraction line, and recording 1 ten.

T: (Point to the place value chart.) How many ones remain to be divided?

S: 10 ones.

T: Yes. We changed 1 ten for 10 ones. Say a division equation for how you distributed 1 ten or 10 ones.

S: 10 ones divided by 2 equals 5 ones.

As students say the division equation, refer to the problem, pointing to the 10 ones and the divisor, and record 5 ones.

T: (Point to the place value chart.) You recorded 5 ones twice. Say a multiplication equation that tells that.

S: 5 ones times 2 equals 10 ones.

As students say the multiplication equation, refer to the problem, pointing to 5 ones and the divisor, and record 10 ones.

T: (Point to the place value chart.) We renamed 10 ones, distributed 10 ones, and have no ones remaining. Say a subtraction equation for that.

S: 10 ones minus 10 ones equals 0 ones.

As students say the subtraction equation, refer to the problem, drawing a subtraction line, and record 0 ones.

Have students share with a partner how the model matches the steps of the algorithm. Note that both show equal groups and how both can be used to check their work using multiplication.

Problem 2

        4 ones ÷ 3

4 tens 2 ones ÷ 3

Display 4 ÷ 3 on the board.

T: Represent 4 ones on the place value chart. With your partner, solve 4 ÷ 3 using place value disks and long division.

S: The quotient is 1, and the remainder is 1.

Lesson 17:   Represent and solve division problems requiring decomposing a
                              remainder in the tens.

                    ©2018 Great Minds®. eureka-math.org

EUREKA
MATH™
Display 42 ÷ 3 on the board.

T: Represent 4 tens 2 ones on the place value chart, and get ready to solve using long division.

T: 4 tens divided by 3 is …? Distribute your disks, and cross off what is used. The answer is…?

S: 1 ten with a remainder of 1 ten. Oh! I remember from last time, we need to change 1 ten for 10 ones.

T: (With students, draw an arrow to show 1 ten decomposed as 10 ones in the place value chart, and show 12 ones in the algorithm.) How many ones remain?

S: 12.

T: Yes. 10 ones + 2 ones is 12 ones.

T: Show 12 ones divided by 3. Complete the remaining steps. What is the quotient?

S: Our quotient is 1 ten 4 ones, or 14.

Have students share with a partner how the model matches the steps of the algorithm, paying particular attention to the decomposition of 1 ten and how it is combined with the ones. Note that this is just the same process the students use in subtraction. We decompose a larger unit into smaller units.

Problem 3

8 tens 4 ones ÷ 3

Display 84 ÷ 3 on the board.

T: Solve for 84 ÷ 3 by using place value disks and long division.

S: The quotient is 28.

T: What was different about the place value chart with this problem?

S: There were a lot more disks! → We had to decompose 2 tens this time.

T: How many ones did you have after decomposing your 2 tens?

S: 24 ones.

T: Show your partner where to find 24 ones in the numerical representation.

S: (Students point to the 2 tens remaining that were bundled, as ones, with the 4 ones.)

T: Check your answer using multiplication.

S: 28 times 3 is 84. Our answer is right!
NOTES ON MULTIPLE MEANS OF ENGAGEMENT:

Students working above grade level and others can be encouraged to solve without place value charts to become more efficient at solving long division problems. Allow them to share and explain their method with others.

Problem Set (10 minutes)

Students should do their personal best to complete the Problem Set within the allotted 10 minutes. For some classes, it may be appropriate to modify the assignment by specifying which problems they work on first. Some problems do not specify a method for solving. Students should solve these problems using the RDW approach used for Application Problems.

Student Debrief (10 minutes)

Lesson Objective: Represent and solve division problems requiring decomposing a remainder in the tens.

The Student Debrief is intended to invite reflection and active processing of the total lesson experience.

Invite students to review their solutions for the Problem Set. They should check work by comparing answers with a partner before going over answers as a class. Look for misconceptions or misunderstandings that can be addressed in the Debrief. Guide students in a conversation to debrief the Problem Set and process the lesson.

Any combination of the questions below may be used to lead the discussion.

- How did Problem 2 allow you to see only the remaining 1 ten in the ones column?
- Explain why 1 ten remains in Problem 4.
- How is the long division recording different in today's lesson compared to yesterday's lesson?
- What different words are we using to describe what we do when we have a remaining ten or tens? (*Break apart, unbundle, change, rename, decompose, regroup*) Which of these words are you most comfortable using yourself?
- What other operation involves changing 1 ten for 10 ones at times? (Subtraction.) What operations involve the opposite, changing 10 ones for 1 ten at times?
- What would happen if we divided the ones before the tens?

> **NOTES ON MULTIPLE MEANS OF ACTION AND EXPRESSION:**
>
> As learners model with place value disks to complete the Problem Set, encourage the following to minimize mistakes:
>
> - Whisper-count as you distribute.
> - Cross out to track the number distributed.
> - Draw dots in arrays. The *hands way* array may be helpful.
> - Circle the remainder.
> - Try disks, dots, numbers, etc. Use what is most efficient for you.

Lesson 17:   Represent and solve division problems requiring decomposing a remainder in the tens.

EUREKA MATH™

- What connection can you find between the written division and the multiplication you used to check your work?
- Why are we learning long division after addition, subtraction, and multiplication?
- How did the Application Problem connect to today's lesson?

Exit Ticket (3 minutes)

After the Student Debrief, instruct students to complete the Exit Ticket. A review of their work will help with assessing students' understanding of the concepts that were presented in today's lesson and planning more effectively for future lessons. The questions may be read aloud to the students.

EUREKA
MATH™

Lesson 18

Objective: Find whole number quotients and remainders.

Suggested Lesson Structure

■ Fluency Practice   (12 minutes)
■ Application Problem   (7 minutes)
■ Concept Development   (31 minutes)
■ Student Debrief   (10 minutes)

   Total Time   **(60 minutes)**
Fluency Practice (12 minutes)

▪ Group Counting   (4 minutes)
▪ Divide Mentally   (4 minutes)
▪ Divide Using the Standard Algorithm   (4 minutes)

Group Counting (4 minutes)

Note: This fluency activity prepares students to divide with remainders during this lesson's Concept Development.

Direct students to count forward and backward, occasionally changing the direction of the count.

   ▪   Fours to 40
   ▪   Sixes to 60

Divide Mentally (4 minutes)

Note: This fluency activity reviews content from Lessons 16 and 17.

Repeat the process from Lesson 17 using the following possible sequence: $48 \div 2$, $55 \div 5$, $96 \div 3$, and $84 \div 4$.

Divide Using the Standard Algorithm (4 minutes)

Materials: (S) Personal white board

Note: This fluency activity reviews Lesson 17's content.

Repeat the process from Lesson 17 using the following possible sequence: $20 \div 3$, $50 \div 2$, $43 \div 3$, and $64 \div 5$.

Application Problem (7 minutes)

Malory's family is going to buy oranges. The Grand Market sells oranges at 3 pounds for 87 cents. How much does 1 pound of oranges cost at Grand Market?

Note: This Application Problem reviews division with a remainder in the tens from Lesson 17.

Concept Development (31 minutes)

Materials: (T) Tens place value chart (Lesson 16 Template) (S) Personal white board, tens place value chart (Lesson 16 Template)

Problem 1: Divide a two-digit number by a one-digit divisor with a remainder in the tens place.

5 tens 7 ones ÷ 3

T: (Write 57 ÷ 3.) Let's divide 57 into 3 equal groups. Break 57 into tens and ones.

S: 5 tens 7 ones.

T: Let's divide 5 tens first. Why?

S: When we divide, we always start with the larger units. → We divide the tens first because we may have to change tens for ones.

T: 5 tens divided by 3…?

S: (Record the steps of the algorithm.) 1 ten in each group, with 2 tens remaining.

T: We've distributed 3 tens. Let's write 3 in the tens place. We also write that there are 2 tens remaining because 5 tens minus 3 tens is 2 tens.

T: How do we divide the remaining 2 tens?

S: We unbundle the 2 tens as 20 ones.

T: Yes. So, how many ones do we have altogether?

S: 27.

T: Yes, 20 ones plus 7 ones is 27 ones.

T: You know your threes facts. Get ready for some mental math. What's 27 ones divided by 3?

S: 9 ones!

T: 9 ones in each group is recorded above, in the ones place. Record the remaining steps. Read the quotient.
> **NOTES ON MULTIPLE MEANS OF ACTION AND EXPRESSION:**
>
> Scaffold long division with the following options:
> - Provide graph paper for easy alignment of tens and ones.
> - Label the tens and ones places.
> - Write zeros as place holders.

EUREKA MATH

S: (Record the remaining steps.) 19.

T: Say the division sentence.

S: 57 divided by 3 is 19.

T: Check with multiplication. What's 19 times 3?

S: 57.

Problem 2: Divide with a remainder in the tens and ones places using the division algorithm.

8 tens 6 ones ÷ 5

T: (Write 86 ÷ 5.) You solved 57 divided by 3 by unbundling tens. Let's try a more challenging problem. How many groups will we divide 86 into?

S: 5.

T: What is the first step?

S: Start with the tens. Divide 8 tens into 5 groups. That's 1 ten in each group with 3 tens remaining.

T: Show me on your personal white board using long division, or the division algorithm, how you recorded the distributed tens and the remaining tens.

T: What will you do with the 3 remaining tens?

S: Unbundle 3 tens as 30 ones.

T: How many ones altogether?

S: 36.

T: Next step?

S: Divide 36 ones into 5 groups. That's 7 ones in each group, with 1 one remaining.

T: How did you record what you distributed? What remains? Check your neighbor's work. Thumbs up if you agree.

T: I see you've written 35 ones distributed under the 36 ones you had at first. Did you write R1? Read your quotient. Read your remainder. What is 86 divided by 5?

S: 17 with a remainder of 1.

T: How could you prove your division is correct?

S: Multiply 17 by 5, and then add 1 more.

T: Work with your partner to check with multiplication.
Problem 3: Use mental math to divide and calculate a remainder.

7 tens 4 ones ÷ 8

- T: (Write 74 ÷ 8.) You've unbundled tens, and you've written remainders in the quotient. Now, take a look at this problem. What's tricky here?
- S: Hey! We can't divide 7 tens into 8 groups! What will we do?
- T: We'll think of our eights facts. I'm thinking of an eights fact whose product is close to 74. Can you guess?
- S: 72. 8 times 9 is 72.
- T: Nice job! But 72 is only part of 74. What's the other part?
- S: 2.
- T: What is 74 divided by 8?
- S: 74 divided by 8 is 9 with a remainder of 2.

Continue with 87 ÷ 9 and 64 ÷ 7. Gradually omit the number bond, and encourage mental math.
NOTES ON MULTIPLE MEANS OF ENGAGEMENT:

Students who have not memorized eights or nines facts may not be ready to use mental math to solve 74 ÷ 8. Adjust the numbers, or provide a multiplication chart. Approach Problems 11 and 12 of the Problem Set similarly if students have not memorized sevens and eights facts.

Problem Set (10 minutes)

Students should do their personal best to complete the Problem Set within the allotted 10 minutes. For some classes, it may be appropriate to modify the assignment by specifying which problems they work on first. Some problems do not specify a method for solving. Students should solve these problems using the RDW approach used for Application Problems.

Student Debrief (10 minutes)

Lesson Objective: Find whole number quotients and remainders.

The Student Debrief is intended to invite reflection and active processing of the total lesson experience.

Invite students to review their solutions for the Problem Set. They should check work by comparing answers with a partner before going over answers as a class. Look for misconceptions or misunderstandings that can be addressed in the Debrief. Guide students in a conversation to debrief the Problem Set and process the lesson.

EUREKA MATH™

Any combination of the questions below may be used to lead the discussion.

- Compare the remainders to the divisors on the Problem Set. What do you find is true? Which always has a larger value? Why is that?

- How did the zero effect your division in Problem 9?

- What did you notice about the divisor, the whole, and quotients in Problems 9 and 10?

- Can you predict whether or not there will be a remainder? How?

- The whole is the same in Problems 11 and 12. Why is the quotient smaller in Problem 11?

Exit Ticket (3 minutes)

After the Student Debrief, instruct students to complete the Exit Ticket. A review of their work will help with assessing students' understanding of the concepts that were presented in today's lesson and planning more effectively for future lessons. The questions may be read aloud to the students.

Name _____   Date _____

Solve using the standard algorithm. Check your quotient and remainder by using multiplication and addition.

EUREKA
MATH™

Lesson 19

Objective: Explain remainders by using place value understanding and models.

Suggested Lesson Structure

■ Fluency Practice   (12 minutes)

■ Application Problem   (8 minutes)

■ Concept Development   (25 minutes)

■ Student Debrief   (15 minutes)

   Total Time   **(60 minutes)**
Fluency Practice (12 minutes)

- Sprint: Mental Division   (8 minutes)
- Divide Using the Standard Algorithm   (4 minutes)

Sprint: Mental Division (8 minutes)

Materials: (S) Mental Division Sprint

Note: This Sprint reviews content from previous lessons and reinforces place value used in the division algorithm.

Divide Using the Standard Algorithm (4 minutes)

Materials: (S) Personal white board

Note: This fluency activity reviews Lesson 17's content.

Repeat the process from Lesson 17 using the following possible sequence: $37 \div 2$, $45 \div 3$, $26 \div 4$, and $58 \div 3$.

Application Problem (8 minutes)

Two friends start a business writing and selling comic books. After 1 month, they have earned \$38. Show how they can share their earnings fairly, using \$1, \$5, \$10, and \$20 bills.

$$\begin{array}{r} 19 \\ 2\overline{)38} \\ -2 \\ \hline 18 \\ -18 \\ \hline 0 \end{array}$$

Each friend will receive \$19 as 1 \$10 bill, 1 \$5 bill, and 4 \$1 bills.

Note: Students practice decomposing a ten using long division from Lesson 17 and with a money model. Other acceptable answers are 1 ten 9 ones, 19 ones, 3 fives 4 ones, or 2 fives 9 ones.

EUREKA MATH™

Lesson 19:   Explain remainders by using place value understanding and models.

267

©2018 Great Minds®. eureka-math.org

Concept Development (25 minutes)

Materials: (T) Tens place value chart (Lesson 16 Template) (S) Personal white board, tens place value chart
(Lesson 16 Template)

Problem 1: Model division with remainders in the tens and ones places using place value disks.

41 ÷ 3

T: (Write 41 ÷ 3.) What disks will you draw to represent 41?

S: 4 tens 1 one.

T: How many equal groups will we divide 41 into?

S: 3.

T: Draw 3 groups, and let's share 4 tens equally. How many
tens in each group? Draw place value disks as you
distribute 4 tens into 3 groups like you're dealing cards to
3 players.

S: 1 ten in each group, with 1 ten remaining.

T: How can we divide the remaining ten?

S: Unbundle 1 ten as 10 ones.

T: Let's see you draw that. (Allow students time to
draw.) What did you do?

S: I drew an arrow from the remaining tens disk in the
tens place and drew 10 ones in the ones place.

T: How many ones do you have now?

S: 11 ones.

T: Let's divide those 11 ones equally into 3 groups. Divide
11 ones into 3 groups by distributing 1 to each group.
How many ones are remaining?

S: 8.

T: Are there enough to distribute again?

S: Yes. We can distribute another one to each group.

T: How many are left now?

S: Five. We can distribute again. We will have 2
remaining.

T: Explain what happened.

S: 2 ones are left after distributing the rest equally. We
had to keep distributing until we didn't have enough to
distribute evenly again.

T: Now, your place value disks clearly show the solution for 41 ÷ 3. Tell me the quotient. Tell me the
remainder.
> **NOTES ON
> MULTIPLE MEANS
> OF ACTION AND
> EXPRESSION:**
>
> Some learners may need less guidance
> to model 41 ÷ 3 and, after solving
> quickly and independently, may benefit
> more from writing a step-by-step script
> for solving 41 ÷ 3 in preparation for
> Problem 5 of the Problem Set. This
> script might be used in a video of the
> student supporting his peers as they
> learn long division.

EUREKA
MATH™

S: 41 divided by 3 is 13 with a remainder of 2.

T: With your partner, write an equation we can use to check your division.

S: (13 × 3) + 2 = 41.

T: With your partner, find where 13, 3, 2, and 41 are represented in the place value chart.

S: Thirteen is the 1 ten and 3 ones in each group. Three is the number of groups we made. Two is the remaining 2 ones from the whole. Forty-one is the whole.

Problem 2: Share $64 as 6 tens and 4 ones equally among 4 friends.

T: Tell your partner what happens when we have an extra ten we can't distribute.

S: We break the ten apart into 10 ones. Then, we add the 10 ones to the ones that are already there. Then, we can distribute the ones into 4 equal groups.

T: Can you think of a real-life situation in which you might change a ten for 10 ones?

S: Yeah! When you're getting change for 10 dollars! → If the soda machine doesn't take tens, you need to change out for ones.

T: Let's say I give 4 students $64 to share equally—6 ten-dollar bills and 4 one-dollar bills. Write an equation and draw place value disks to show how to divide the money.

T: What happens when you try to share 6 ten-dollar bills equally with 4 people?

S: Each person gets 1 ten-dollar bill, but then you have 2 ten-dollar bills left.

T: What do you do?

S: Make change! Cash in those 2 ten-dollar bills for 20 ones. Then, we can share the money fairly. → Or, they could change the 2 tens for 4 fives. That would work, too.

T: You're both correct. Either approach would work. Since we're using a place value chart to show division, let's pretend they changed the 2 tens for 20 ones and model that. Since we have so many ones, model with quick dots as you distribute like a fast card dealer. How will you distribute the ones?

S: I will keep distributing them until I can't distribute them equally anymore. This time, I was able to distribute evenly.

T: Why do you have to keep distributing?

S: If I don't keep distributing, there will be too many remaining. That means that you would be able to distribute again but didn't.

T: How much money does each student receive?

S: $16.

T: Check your quotient with your partner using multiplication.

S: 16 × 4 = 64. I see 4 groups of 1 ten 6 ones, which is 64.
Problem Set (15 minutes)

Students should do their personal best to complete the Problem Set within the allotted 15 minutes. For some classes, it may be appropriate to modify the assignment by specifying which problems they work on first. Some problems do not specify a method for solving. Students should solve these problems using the RDW approach used for Application Problems.

Student Debrief (15 minutes)

Lesson Objective: Explain remainders by using place value understanding and models.

The Student Debrief is intended to invite reflection and active processing of the total lesson experience.

Invite students to review their solutions for the Problem Set. They should check work by comparing answers with a partner before going over answers as a class. Look for misconceptions or misunderstandings that can be addressed in the Debrief. Guide students in a conversation to debrief the Problem Set and process the lesson.

Any combination of the questions below may be used to lead the discussion.

- In Problem 2, Cayman's remainder is larger than the divisor. What rule can you suggest to Cayman so he doesn't make this mistake again? Was his answer completely wrong? Why not?

- In Problem 4, the friends have to make change for the 1 ten-dollar bill. Why can't they tear the bill in half? How does that relate to the place value disks?

- In Problem 5, how did your script describe the remainder in the tens and ones?

- Select a few students to share and compare their scripts for solving 45 ÷ 3.

- Compare using place value disks and other methods to divide. Which do you prefer? Why?

- We related a remainder in the tens place to making change with money. What other real-life situations can you relate it to? Is this similar to mixed metric units, such as having 5 liters of water to share among 4 people?

- With money, sometimes we might use units other than ones and tens, such as fives or twenties. Why do you think we use only ones and tens to model division on the place value chart?

Lesson 20

Objective: Solve division problems without remainders using the area model.

Suggested Lesson Structure

■ Fluency Practice   (12 minutes)
■ Application Problem   (8 minutes)
■ Concept Development   (30 minutes)
■ Student Debrief   (10 minutes)

   Total Time   **(60 minutes)**
Fluency Practice (12 minutes)

▪ Divide Using the Standard Algorithm   (4 minutes)
▪ Find the Unknown Factor   (5 minutes)
▪ Mental Multiplication   (3 minutes)

Divide Using the Standard Algorithm (4 minutes)

Materials: (S) Personal white board

Note: This fluency activity reviews Lesson 17's content.

Repeat the process from Lesson 17 using the following possible sequence: 67 ÷ 2, 60 ÷ 4, 29 ÷ 3, and 77 ÷ 4.
Find the Unknown Factor (5 minutes)

Materials: (S) Personal white board

Note: This fluency activity prepares students for Lesson 22's Concept Development

   T: (Write 5 × ____ = 15.) Say the unknown factor.
   S: 3.
   T: (Write 15 ÷ 5.) On your personal white board, write the division problem.
   S: (Write 15 ÷ 5 = 3.)

Continue with the following possible sequence: 3 × ____ = 12, 4 × ____ = 12, 5 × ____ = 35, 6 × ____ = 36, 7 × ____ = 49, 9 × ____ = 81, 6 × ____ = 48, 7 × ____ = 42, and 9 × ____ = 54.

Mental Multiplication (3 minutes)

Note: This fluency activity reviews content taught earlier in the module.

> T: (Write 3 × 2 = ___.) Say the complete multiplication sentence in unit form.
>
> S: 3 ones × 2 = 6 ones.
>
> T: (Write 3 × 2 = 6. To the right, write 30 × 2 = ___.) Say the complete multiplication sentence in unit form.
>
> S: 3 tens × 2 = 6 tens.
>
> T: (Write 30 × 2 = 60. To the right, write 30 × 20 = ___.) Say the complete multiplication sentence in unit form.
>
> S: 3 tens × 2 tens = 6 hundreds.
>
> T: (Write 30 × 20 = 600.)
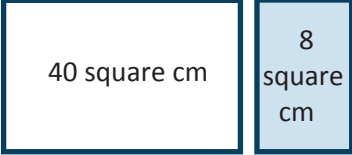

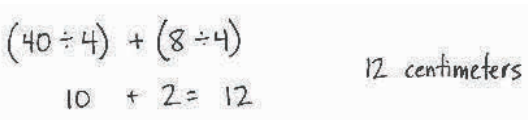

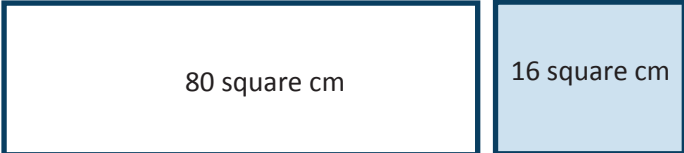

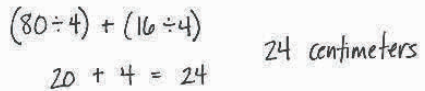

> **NOTES ON MULTIPLE MEANS OF EXPRESSION:**
>
> As with any mental math, some students do better when having the option to write. This aids in their processing of the oral commands and reduces stress, which, though beneficial to some, may be crippling to others.

Continue with the following possible sequence: 4 × 2, 40 × 2, 40 × 20, 5 × 3, 50 × 3, and 50 × 30.

Application Problem (8 minutes)

Write an expression to find the unknown length of each rectangle. Then, find the sum of the two unknown lengths.

a.
4 cm | 40 square cm | 8 square cm

$(40 \div 4) + (8 \div 4)$
10 + 2 = 12
12 centimeters

b.
4 cm | 80 square cm | 16 square cm

$(80 \div 4) + (16 \div 4)$
20 + 4 = 24
24 centimeters

Note: This Application Problem serves as an introduction to today's Concept Development, in which students find the total unknown length of a rectangle with an area of 48, corresponding to Part (a), and 96, corresponding to Part (b).

Lesson 20:   Solve division problems without remainders using the area model.

EUREKA MATH™

Concept Development (30 minutes)

Materials: (S) Personal white board

Problem 1: Decompose 48 ÷ 4 from whole to part.

T: Draw a rectangle with an area of 48 square units and a width of 4 units.

S: (Draw.)

T: Draw a new rectangle with the same area directly below but partitioned to match the areas of the rectangles in Part (a) of the Application Problem.

T: Let's draw a number bond to match the whole and parts of the rectangle.

S/T: (Draw the bond as pictured below.)
T: Let's find the unknown side lengths of the smaller rectangles and add them. (Show as the distribution of the quotients shown above.) What is 40 ÷ 4?

S: 10.

T: What is 8 ÷ 4?

S: 2.

T: What is 10 and 2?

S: 12.

T: What is 48 divided by 4?

S: 12.

T: What is the length of the unknown side?

S: 12 units.

T: Take a moment to record the number sentences, reviewing with your partner their connection to both the number bond and the area model.

T: Work with your partner to partition the same area of 48 as 2 twenties and 8. When you are finished, try to find another way to partition the area of 48 so it's easy to divide.
T: (Allow students to work for about four minutes.) Did anyone find another way to partition the area of 48 so it's easy to divide?

S: Yes! 24 + 24. 24 divided by 4 is 6. 6 + 6 is 12. → 30 and 18 don't work well because 30 has a remainder when you divide it by 4. → I did it by using 4 rectangles, each with an area of 12 square units. → Oh, yeah, 12 + 12 + 12 + 12.

T: Explain to your partner why different ways of partitioning give us the same correct side length.

S: You are starting with the same amount of area but just chopping it up differently. → The sum of the lengths is the same as the whole length. → You can take a total, break it into parts, and divide each of them separately. → I use the same break apart and distribute strategy to find the answer to 56 ÷ 8. 40 ÷ 8 is 5. 16 ÷ 8 is 2. 5 and 2 makes 7.

Problem 2: Decompose 96 ÷ 4 from whole to part.

Repeat the same process with Part (b) from the Application Problem.
T: How did you partition the area of 96?

S: We chopped 96 into 40 + 40 + 16. → It was just like 48 ÷ 4. We saw that we could partition 96 into 4 twenties and 2 eights. → We made 96 into 2 forty-eights and used our answer from 48 ÷ 4. All we had to do was double it.

T: Discuss with your partner why we do not decompose 96 as 90 and 6.

S: 9 tens ÷ 4 gives a remainder.

T: True!

Problem 3: Compose 96 ÷ 4 from part to whole.

T: (Write 96 ÷ 4.) Thinking about area, let's try a new way to divide. The expression 96 ÷ 4 can describe a rectangle with an area of 96 square units. We are trying to find out the length of the unknown side.

T: What is the known side width?

S: 4.

T: (Draw a rectangle with a width of 4.) Four times how many tens gets us as close as possible to an area of 9 tens? (Point to the 9 tens of the dividend.)

S: 2 tens.

T: Let's give 2 tens to the length. (Label 2 tens above the rectangle.) Let's record the 2 tens in the tens place.

EUREKA
MATH™

T: What is 4 times 2 tens?

S: 8 tens. (Record 8 below the 9 tens.)

T: How many square units is that?

S: 80 square units. (Record 80 square units in the rectangle.)

T: How many tens remain?

S: 1 ten.

T: (Record 1 ten below the 8 tens.) Let's add the remaining ten to the 6 ones. What is 1 ten + 6 ones? (Record the 6 ones to the right of the 1 ten.)

S: 16.

T: We have 16 square units remaining with a width of 4. (Point to the 16 in the problem.) Four times how many ones gets us as close as possible to an area of 16 square units?

S: 4 ones.

T: Let's give 4 ones to the length.

T: What is 4 times 4?

S: 16. We have 16 square units.

T: (Record 16 square units in the rectangle.) We had 16 square units to divide, and we did. (Record 16 in the problem, and subtract to get zero.) We have no more area to divide.

T: Tell me the length of the unknown side.

S: 24.

T: Our quotient tells us that length.

T: How can we express the length of the unknown side using the distributive property?

S: (80 ÷ 4) + (16 ÷ 4).

T: With your partner, draw arrows to connect the distributive property and the area model.

T: Review our four drawings and our process with your partner. Try to reconstruct what we did step-by-step before we try another one.

T: (Allow time for students to review.) We solved 96 divided by 4 in two very different ways using the area model. First, we started with the whole rectangle and partitioned it. The second way was to go one place value at a time and make the whole rectangle from parts.

Problem Set (10 minutes)

Students should do their personal best to complete the Problem Set within the allotted 10 minutes. For some classes, it may be appropriate to modify the assignment by specifying which problems they work on first. Some problems do not specify a method for solving. Students should solve these problems using the RDW approach used for Application Problems.

Student Debrief (10 minutes)

Lesson Objective: Solve division problems without remainders using the area model.

The Student Debrief is intended to invite reflection and active processing of the total lesson experience.

Invite students to review their solutions for the Problem Set. They should check work by comparing answers with a partner before going over answers as a class. Look for misconceptions or misunderstandings that can be addressed in the Debrief. Guide students in a conversation to debrief the Problem Set and process the lesson.

Any combination of the questions below may be used to lead the discussion.

- In Problem 2, did you partition the rectangle the same way as your partner? Why were we able to go from whole to part?

- Explain the connection between the written method, the number bond, and the area model in Problem 3.

- In the last problem, explain the connection between the algorithm and the area model.

- Each time we divide, what happens to the amount of area we still have left to divide?

- Even though division is messy, I think it is the most interesting operation of all because— imagine this—sometimes that little piece that is left to divide is always there, even though it gets infinitely small! Talk to your partner about what you think I might mean by that.

Lesson 20:   Solve division problems without remainders using the area model.

Lesson 21

Objective: Solve division problems with remainders using the area model.

Suggested Lesson Structure

- ■ Fluency Practice   (12 minutes)
- ■ Application Problem   (8 minutes)
- ▢ Concept Development   (30 minutes)
- ■ Student Debrief   (10 minutes)

    Total Time   **(60 minutes)**
Fluency Practice (12 minutes)

- ▪ Sprint: Division with Remainders   (8 minutes)
- ▪ Find the Unknown Factor   (4 minutes)

Sprint: Division with Remainders (8 minutes)

Materials: (S) Division with Remainders Sprint

Note: This Sprint reviews content from Topic E, including division with and without remainders.

Find the Unknown Factor (4 minutes)

Materials: (S) Personal white board

Note: This fluency activity prepares students for Lesson 22's Concept Development

> T: (Write $6 \times$ ___ = 18.) Say the unknown factor.
> S: 3.
> T: (Write $18 \div 6$.) On your personal white board, complete the division sentence.
> S: (Write $18 \div 6 = 3$.)

Continue with the following possible sequence: $3 \times$ ___ = 21, $4 \times$ ___ = 20, $5 \times$ ___ = 25, $6 \times$ ___ = 42, $7 \times$ ___ = 56, $9 \times$ ___ = 72, $6 \times$ ___ = 54, $7 \times$ ___ = 63, and $9 \times$ ___ = 63.

Application Problem (8 minutes)

A rectangle has an area of 36 square units and a width of 2 units. What is the unknown side length?
Method 1:   Method 2:
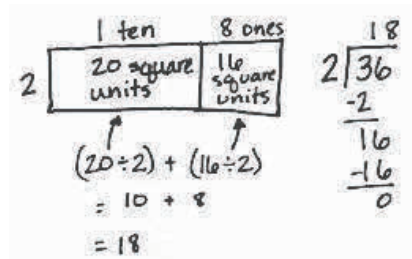

The unknown side length is 18 units.

Note: This Application Problem serves as an introduction to Problem 1 in the Concept Development, in which students find the total unknown length of a rectangle with an area of 37 and a width of 2. In today's Concept Development, students move on to the complexity of using the area model when there is a remainder.

Concept Development (30 minutes)

Materials: (T) Square grid paper (S) Problem Set

Note: Use the Problem Set for Lesson 21 to record work for Problems 1 and 2 of this Concept Development. Use the remaining problems on the Problem Set for class instruction or independent practice.

Problem 1: 37 ÷ 2

T: (Display the Application Problem with an area of 36 square units on grid paper.) This rectangle has a side length of 18. What would be the area of a rectangle with a width of 2 units and a length of 19 units? (Draw on grid paper.)

S: 38 square units.

T: So, we cannot represent a rectangle with a width of 2 and an area of 37 square units. Let's get as close as we can to 37 square units by building a rectangle part to whole as we did yesterday.

EUREKA
MATH
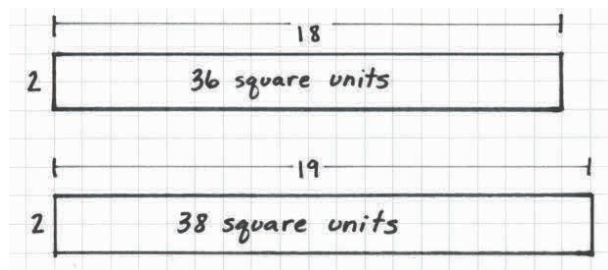

T: Draw a rectangle. Label the width as 2 units.
    Two times how many tens gets us as close as
    possible to an area of 3 tens?

S: 1 ten.

T: Label this rectangle with a length of 1 ten.
    Record 1 ten in the tens place. What is
    1 ten times 2?

S: 2 tens.

T: How many square units of area is that?

S: 20 square units.

T: (Record 20 square units in the rectangle.) How
    many tens remain?

S: 1 ten. (Record 1 ten below 2 tens. Record
    7 ones next to the 1 ten.)

T: 17 ones remain. Two times how many ones
    gives us an area close to 17 square units?

S: 8 ones.

T: Extend the rectangle, and label its length as
    8 ones. 8 ones times 2 is…?

S: 16 ones.

T: 16 ones represents the area of this rectangle.
    (Label as 16 square units.) How many ones
    remain?

S: 1 one.

T: To make a new length unit, we must have
    2 square units. We only have 1. Let's draw
    the remaining 1 square unit.

T: Let's validate our drawing and algorithm using
    the distributive property. 20 square units
    divided by 2 is…?

S: 10.

T: 10 length units. 16 square units divided by 2 is…?

S: 8 length units.

T: 10 length units plus 8 length units is…?

S: 18 length units.

T: Let's solve for the area. 18 length units times 2
    length units equals?

S: 36 square units.

T: We see that in our area model. Add 1 square unit, our remainder.

S: 37 square units.

$2 \times \_\_ \text{ tens} = 3 \text{ tens}$

$2\overline{)37}$

$\begin{array}{r} 1 \\ 2\overline{)37} \\ -2 \\ \hline 1 \end{array}$

$1 \text{ ten} + 7 \text{ ones} = 17 \text{ ones}$

$2 \times \_\_ \text{ ones} = 17 \text{ ones}$

1 ten   8 ones

2 | 20 square units | 16 square units

$\begin{array}{r} 18 \\ 2\overline{)37} \\ -2 \\ \hline 17 \\ -16 \\ \hline 1 \end{array}$

One square unit remains. It doesn't make another whole side length.

1 ten   8 ones

2 | 20 square units | 16 square units | 1 square unit remaining

The length of the unknown side is 18 units. One square unit was leftover.

$(20 \div 2) + (16 \div 2)$

$= 10 + 8$

$= 18$

$(18 \times 2) + 1 = 37$

Problem 2: 76 ÷ 3

T: (Write 76 ÷ 3.) I'm going to represent this with an area model moving from part to whole by place value, just as we did with 37 ÷ 2. What should the total area be?

S: 76 square units.

T: (Draw a rectangle.) What is the width or the known side length?

S: 3 length units.

T: (Label a width of 3.) Three times how many tens gets us as close as possible to an area of 7 tens? (Point to the 7 tens of the dividend.)

S: 2 tens.

T: Let's give 2 tens to the length. (Write the length on the area model.) Let's record 2 tens in the tens place.

T: What is 2 tens times 3?

S: 6 tens. (Record 6 tens below the 7 tens.)

T: How many square units of area is that?

S: 60 square units. (Record in the rectangle.)

T: How many tens remain?

S: 1 ten. (Record 1 ten below the 6 tens.)

T: Let's add the remaining ten to the 6 ones. What is 1 ten + 6 ones? (Record the 6 ones to the right of the 1 ten.)

S: 16 ones.

T: We have an area of 16 square units remaining with a width of 3. (Point to the 16 in the algorithm.) Three times how many ones gets us as close as possible to an area of 16?

S: 5 ones.

T: Let's give 5 ones to the length. (Label the length.)

T: This rectangle has an area of…?

S: 15 square units.

T: How many square units remain?

S: 1 square unit.

T: What is the unknown length, and how many square units remain?
The length of the unknown side is 25 units. One square unit was left over.

Lesson 21:   Solve division problems with remainders using the area model.
S: The unknown length is 25 with a remainder of 1 square unit.

T: 60 square units divided by a side length of 3 (record with the distributive property as shown to the right) gave us a side length of…?

S: 20.

T: Let's say "length units."

S: 20 length units.

T: 15 square units divided by a side length of 3 (record) gave us a side length of…?

S: 5 length units.

T: The total length was…?

S: 25 length units.

T: With 1 square unit, we did not add on to the length.

T: We built the area one rectangle at a time by place value. Each time after we divide, we have some area remaining. After dividing the tens, we had 16 square units remaining. (Point to the model and long division.) After dividing the ones, we had 1 square unit remaining. (Point to the model and long division.) Later, when we study fractions more, we will be able to make a little more length from that area, but for now, we are just going to leave it as 1 square unit of area remaining. (Optional: See the Student Debrief for a way of understanding the remainder as length.)

T: Review with your partner how we solved this problem step by step.

Have students proceed through the balance of the Problem Set, supported as necessary.

$$(60 \div 3) + (15 \div 3)$$
$$= 20 + 5$$
$$= 25$$
$$(25 \times 3) + 1 = 76$$

NOTES ON MULTIPLE MEANS OF REPRESENTATION:

To draw the area models, consider giving students the option of using graph paper, which gives the concreteness of the squares that make up the area.

Problem Set (10 minutes)

Students should do their personal best to complete the remainder of the Problem Set within the allotted 10 minutes. For some classes, it may be appropriate to modify the assignment by specifying which problems they work on first. Some problems do not specify a method for solving. Students should solve these problems using the RDW approach used for Application Problems.

Student Debrief (10 minutes)

Lesson Objective: Solve division problems with remainders using the area model.

The Student Debrief is intended to invite reflection and active processing of the total lesson experience.

Invite students to review their solutions for the Problem Set. They should check work by comparing answers with a partner before going over answers as a class. Look for misconceptions or misunderstandings that can be addressed in the Debrief. Guide students in a conversation to debrief the Problem Set and process the lesson.

Any combination of the questions below may be used to lead the discussion.

- Explain to your partner the connection between the distributive property and the area model in Problem 3.

- Because we often have remainders when we divide, we have to use the area model by building up from part to whole. What did the first rectangle you drew in Problem 1 represent? The next chunk of the rectangle?

- Each time we divide, what happens to the amount of area we still have left to divide?

- Why don't we have this complication of leftovers or remainders with multiplication?

- In Problem 4, we didn't know if we were going to have a remainder in the ones place, so instead we built up to the area working with one place value unit at a time. How might the problems with remainders have been challenging if you started with the whole area, like in Lesson 20?

- (Optional.) Let's look back at Problem 2, 76 ÷ 3. What if we cut this remaining square unit into 3 equal parts with vertical lines? What is the length of one of these units? What if we stack them to add more area? What is the total length of the new rectangle, including this tiny piece?

©2018 Great Minds®. eureka-math.org

Exit Ticket (3 minutes)

After the Student Debrief, instruct students to complete the Exit Ticket. A review of their work will help with assessing students' understanding of the concepts that were presented in today's lesson and planning more effectively for future lessons. The questions may be read aloud to the students.

10. Ninety-seven lunch trays were placed equally in 4 stacks. How many lunch trays were in each stack?
     How many lunch trays will be left over?

Lesson 21:   Solve division problems with remainders using the area model.

EUREKA
MATH™

Topic F
Reasoning with Divisibility

Focus Standard:	■	Find all factor pairs for a whole number in the range 1–100. Recognize that a whole number is a multiple of each of its factors. Determine whether a given whole number in the range 1–100 is a multiple of a given one-digit number. Determine whether a given whole number in the range 1–100 is prime or composite.
Instructional Days:	4	
Coherence -Links from:	G3–M1	Properties of Multiplication and Division and Solving Problems with Units of 2–5 and 10
	G3–M3	Multiplication and Division with Units of 0, 1, 6–9, and Multiples of 10
-Links to:	G5–M2	Multi-Digit Whole Number and Decimal Fraction Operations
	G5–M3	Addition and Subtraction of Fractions

In Topic F, armed with an understanding of remainders, students explore factors, multiples, and prime and composite numbers within 100. Students gain valuable insights into patterns of divisibility as they test for primes and find factors and multiples, at times using their new skill of dividing double-digit dividends. This prepares them for Topic G's work with dividends of up to four digits.

Lesson 22 has students find factor pairs for numbers to 100 and then use their understanding of factors to determine whether numbers are prime or composite. In Lesson 23, students use division to examine numbers to 100 for factors and make observations about patterns they observe, for example, "When 2 is a factor, the numbers are even." Lesson 24 transitions the work with factors into a study of multiples, encouraging students to notice that the set of multiples of a number is infinite while the set of factors is finite.

In Lesson 25, the Sieve of Eratosthenes uses multiples to enable students to identify and explore the properties of prime and composite numbers to 100.

A Teaching Sequence Toward Mastery of Reasoning with Divisibility

Objective 1: Find factor pairs for numbers to 100, and use understanding of factors to define prime and composite.
(Lesson 22)

Objective 2: Use division and the associative property to test for factors and observe patterns.
(Lesson 23)

Objective 3: Determine if a whole number is a multiple of another number.
(Lesson 24)

Objective 4: Explore properties of prime and composite numbers to 100 by using multiples.
(Lesson 25)

EUREKA MATH™

Lesson 22

Objective: Find factor pairs for numbers to 100, and use understanding of factors to define prime and composite.

Suggested Lesson Structure

■ Fluency Practice   (12 minutes)
■ Application Problem   (5 minutes)
■ Concept Development   (33 minutes)
■ Student Debrief   (10 minutes)

   Total Time   **(60 minutes)**
Fluency Practice (12 minutes)

▪ Divide Using the Area Model   (4 minutes)
▪ Find the Unknown Factor   (5 minutes)
▪ Mental Multiplication   (3 minutes)

Divide Using the Area Model (4 minutes)

Materials: (S) Personal white board

Note: This fluency activity reviews content from Lesson 20.

   T: (Project an area model that shows 68 ÷ 2.) Write a
        division expression for this area model.
   S: (Write 68 ÷ 2.)
   T: Label the length of each rectangle in the area model.
   S: (Write 30 above the 60 and 4 above the 8.)
   T: Solve using the standard algorithm or the distributive
        property with a number bond.

Continue with the following possible sequence: 96 ÷ 3, 72 ÷ 3, and 72 ÷ 4.

2	60	8

Find the Unknown Factor (5 minutes)

Note: This fluency activity prepares students for the Concept Development.

Repeat the process from Lesson 20 for 3 × ___ = 9, 4 × ___ = 16, 5 × ___ = 45, 6 × ___ = 42, 7 × ___ = 56, 9 × ___ = 72, 6 × ___ = 54, 7 × ___ = 63, and 9 × ___ = 54.

Mental Multiplication (3 minutes)

Note: This fluency activity reviews content taught earlier in the module.

Repeat the process from Lesson 20 with the following possible sequence: 4 × 2, 4 × 20, 2 × 40, 20 × 40, 3 × 3, 3 × 30, 30 × 30, 3 × 4, 3 × 40, and 30 × 40.

Application Problem (5 minutes)

8 × _____ = 96. Find the unknown side length, or factor. Use an area model to solve the problem.
Note: This Application Problem applies the Topic E skill of dividing a two-digit dividend using an area model and serves as a lead-in to this lesson's Concept Development by using area models to illustrate the concept of factor pairs.

Concept Development (33 minutes)

Materials: (S) Personal white board

Problem 1: Identify the factors and product represented in an array.

Display a 1 × 8 array and a 2 × 4 array.

- T: Tell your partner the multiplication sentences that are represented by these arrays.
- S: 1 × 8 = 8 and 2 × 4 = 8.
- T: Yes, both arrays show a product of 8. The factors 1 and 8 and the factors 2 and 4 are multiplied to give a product of 8.
- T: 1, 2, 4, and 8 are all factors of 8.
> **NOTES ON MULTIPLE MEANS OF ACTION AND EXPRESSION:**
>
> Provide or guide students to make a table to find and organize the factor pairs of 8 and 18. Challenge students working above grade level to identify and present a method to their peers of finding factor pairs. Assist students working below grade level or those who need further concrete understanding of factor pairs to use tiles, creating arrays to find all of the factors of a given number.

312   Lesson 22:   Find factor pairs for numbers to 100, and use understanding of factors
                                          to define prime and composite.

©2018 Great Minds®. eureka-math.org

Display arrays for 1 × 18 and 2 × 9.

o o o o o o o o o o o o o o o o o o
1 × 18 = 18

T: What product is represented in both arrays?

S: 18.

T: Record the multiplication sentences for each array.

o o o o o o o o o
o o o o o o o o o
2 × 9 = 18

S: 1 × 18 = 18 and 2 × 9 = 18.

T: Circle the factors. Write the factors of 18 that are represented in order from least to greatest.

o o o o o o
o o o o o o
o o o o o o
3 × 6 = 18

S: (Write 1, 2, 9, 18.)

T: With your partner, draw an array to represent another pair of factors with the product of 18.

T: (Pause while students work.) What new factors of 18 did you find?

1, 2, 3, 6, 9, 18

S: 3 and 6.

T: Revise your list of factors of 18.

S: 1, 2, 3, 6, 9, and 18.

T: How can we make sure we found all of the factors of 18?

3 is not a factor of 8, so I found all of the factors of 8!

1, 2, 4, 8

S: I can use my multiplication chart. → I can think through my multiplication facts. → But what if the number is really big, like 92? I don't know all the factors of 92. → I could draw arrays to find all the factors, making rows of 3, then 4, then 5, and all the way to 92. → That will take a long time.

T: Look at the list of factors for 18. Draw an arrow from 1 to 18. These are factor pairs because 1 × 18 = 18. With your partner, draw the rest of the arrows to connect the factor pairs.

S: (Draw as pictured to the right above.)

T: Notice that 3 and 6 are the middle pairs. We've checked everything up to 3, and the counting numbers between 3 and 6 are not factors of 18, so we found all the pairs. Try that with the factors of 8.
Problem 2: Identify factors to define prime and composite numbers.

Display the number sentence 2 × 8 = 16.

T: What are the factors?

S: 2 and 8.

T: What other multiplication sentences can you write using different factors that will give us the same product?

S: 1 × 16 = 16. 4 × 4 = 16.

T: So, what are all of the factors of 16?

S: 1, 2, 4, 8, and 16.

EUREKA
MATH™

Lesson 22:   Find factor pairs for numbers to 100, and use understanding of factors to define prime and composite.

313

©2018 Great Minds®. eureka-math.org

T: How do you know those are all of the factors of 16?

S: I listed them in order. When I got to 8, I noticed I already had its factor pair. Two times 8 is 16, so I didn't have to go any further. → I stopped at 8, too, because it was half of 16. There isn't a factor between 1 and 2, so I guess we never need to go beyond the halfway point.
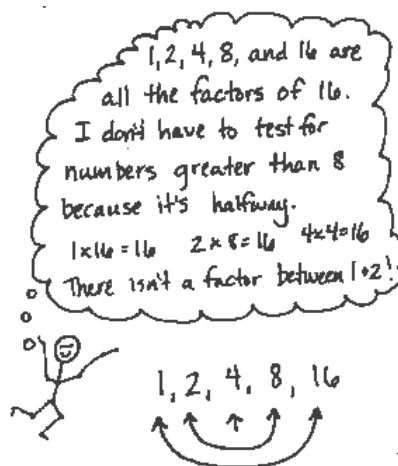

Display the equation 1 × 7 = 7.

T: What are the factors in this equation?

S: 1 and 7.

T: Find another factor pair for 7.

S: 7 × 1? → Those are the same factors. → If we drew arrays to represent factors of 7, the array for 1 × 7 and 7 × 1 would look the same. → I can't find another pair. → There can't be another pair. 2, 3, 4, 5, and 6 don't work.

T: I hear you saying that 1 and 7 are the only factors. Talk to your partner. How is that different from the factors of 8, 10, 16, and 18?

S: There are more factor pairs for 8, 10, 16, and 18 than there are for 7. → Seven has only one pair of factors, but the other numbers we looked at had more than one pair.

T: That's right! Now think about the number 5. Name a pair of factors that will give us a product of 5.

S: 1 and 5.

T: Are there any other factor pairs?

S: Nope. One times 5 makes 5 just like 1 times 7 is seven. → They both only have only one set of factors.

T: Numbers like 5 and 7 that have *exactly* two factors, 1 and the number itself, are called **prime numbers**.

T: With your partner, list at least two more prime numbers. (Allow time for students to discover and list. Review their findings for numbers such as 11, 13, and 17.)

T: (Refer to list just created.) If these are prime numbers, can you name a number that is not prime?

S: (Responses will vary.)

T: Yes! The numbers you mentioned have at least one factor other than 1 and the number itself. They are called **composite numbers**.

T: Let's use 6 as an example. Does 6 have more than two factors?

S: Yes! One and 6 are factors, but 2 and 3 are also factors.

T: So, what can we say about the number 6?

S: It is composite. It has more than two arrays to represent it. It has more than two factors.

314   Lesson 22:   Find factor pairs for numbers to 100, and use understanding of factors
                              to define prime and composite.

                     ©2018 Great Minds®. eureka-math.org

Problem 3: Identify factors of numbers and determine if they are prime or composite.

Display the numbers 23, 35, and 48.

> T: Let's use a table to record the factor pairs for 35. Say the first factor pair.

Guide students to complete the table as a class, using their multiplication facts.

> T: Is 35 a prime or composite number? Why?
>
> S: Composite, because it has more than one factor pair.
>
> T: With your partner, use a table to list factors of 23 and 48 and tell if each one is prime or composite.

Allow three minutes for students to work.

> T: Are any of these numbers prime numbers? How do you know?
>
> S: Twenty-three is prime because we thought about all the possible factors, other than one, up to 11 and none worked.
>
> T: Why can we stop at the number 11?
>
> S: Eleven is the closest whole number to half of 23. Once I get halfway, I have found all of the factor pairs. After that, they just keep repeating.
>
> T: Why is 48 composite?
>
> S: There are more than two factors. → It has 6 and 8 as factors. → It also has 4 and 12. → I found 10 factors! It sure isn't prime!

Problem Set (10 minutes)

Students should do their personal best to complete the Problem Set within the allotted 10 minutes. For some classes, it may be appropriate to modify the assignment by specifying which problems they work on first. Some problems do not specify a method for solving. Students should solve these problems using the RDW approach used for Application Problems.

> **NOTES ON MULTIPLE MEANS OF ACTION AND EXPRESSION:**
>
> Provide concrete manipulatives for students to explore arrays as they classify each number in Problem 1 of the Problem Set as prime or composite. Numbers that can be arranged in more than one array pattern are composite.

EUREKA MATH™

Lesson 22:   Find factor pairs for numbers to 100, and use understanding of factors to define prime and composite.

315

©2018 Great Minds®. eureka-math.org

Student Debrief (10 minutes)

Lesson Objective: Find factor pairs for numbers to 100, and use understanding of factors to define prime and composite.

The Student Debrief is intended to invite reflection and active processing of the total lesson experience.

Invite students to review their solutions for the Problem Set. They should check work by comparing answers with a partner before going over answers as a class. Look for misconceptions or misunderstandings that can be addressed in the Debrief. Guide students in a conversation to debrief the Problem Set and process the lesson.

Any combination of the questions below may be used to lead the discussion.

- Compare the factors in Problem 1(e) and 1(l). Twenty-four is double 12. What do you notice about their factors? Compare the factors in Problem 1(d) and 1(i). Eighteen is double 9. What do you notice about their factors?

- In Problem 1, what numbers have an odd number of factors? Why is that so?

- Are all prime numbers odd? Explain what you would tell Bryan in Problem 3.

- Explain your answer to Problem 3(b). Are all even numbers composite? How many even numbers are not composite?

- We talked a lot about the number 1 today as being a factor of other numbers, but we have not classified it as **prime** or **composite**. Can 1 be composite? (No.) It turns out that it's not considered prime either!

> **NOTES ON PRIME NUMBERS:**
>
> Since 0 times any number is 0, it behaves differently than other numbers. Because of this difference, 0 is not classified as prime or composite.
>
> Many students might reason that 1 should be prime since its only factors are 1 and itself. In fact, their logic is sound, and throughout history, many mathematicians would have agreed! However, choosing to define 1 as neither prime nor composite leads to simpler statements of theorems regarding the structure of the number system. This choice has become universally accepted in more recent times.

EUREKA MATH™

©2018 Great Minds®. eureka-math.org

Exit Ticket (3 minutes)

After the Student Debrief, instruct students to complete the Exit Ticket. A review of their work will help with assessing students' understanding of the concepts that were presented in today's lesson and planning more effectively for future lessons. The questions may be read aloud to the students.

2. Find all factors for the following numbers and classify as prime or composite. Explain your classification of each as prime or composite.

Factor Pairs for 25	
1	25
5	5

Composite
more than 2 factors

Factor Pairs for 28	
1	28
2	14
4	7

Composite
more than 2 factors

Factor Pairs for 29	
1	29

Prime
only 2 factors,
just 1 and itself (29)

3. Bryan says all prime numbers are odd numbers.
   a. List all of the prime numbers less than 20 in numerical order.

   2, 3, 5, 7, 11, 13, 17, 19

   b. Use your list to show that Bryan's claim is false.

   Bryan's claim is false because 2 is a prime number but it is an even number.

4. Sheila has 28 stickers to divide evenly among 3 friends. She thinks there will be no leftovers. Use what you know about factor pairs to explain if Sheila is correct.

   Sheila is incorrect. 3 is not a factor of 28. 3 is a factor of 27, so each friend could receive 9 stickers each, and there would be one sticker left over.
   3 × 9 = 27   27 + 1 = 28

Lesson 22:   Find factor pairs for numbers to 100, and use understanding of factors to define prime and composite.

Lesson 23

Objective: Use division and the associative property to test for factors and observe patterns.

Suggested Lesson Structure

- ■ Fluency Practice   (12 minutes)
- ■ Application Problem   (5 minutes)
- ■ Concept Development   (33 minutes)
- ■ Student Debrief   (10 minutes)
  - **Total Time**   **(60 minutes)**
Fluency Practice (12 minutes)

- ▪ Use Arrays to Find Factors   (6 minutes)
- ▪ Multiply Two Factors   (4 minutes)
- ▪ Prime or Composite?   (2 minutes)

Use Arrays to Find Factors (6 minutes)

Materials: (S) Personal white board

Note: This fluency activity reviews Lesson 22's content. To challenge students, have them construct the arrays instead of having them projected.

- T: (Project a 1 × 8 array.) What is the width of the array?
- S: 1 unit.
- T: (Write 1.) What's the length of the array?
- S: 8 units.
- T: (Write 8.) Write the multiplication sentence.
- S: (Write 1 × 8 = 8.)
Repeat process for a 2 × 4 array.

- T: List the factors of 8.
- S: (Write factors of 8: 1, 2, 4, 8.)

Continue with following possible sequence: factors of 12, factors of 16, and factors of 18.

Lesson 23:   Use division and the associative property to test for factors and observe patterns.

323

©2018 Great Minds®. eureka-math.org

Multiply Two Factors (4 minutes)

Materials: (S) Personal white board

Note: This fluency activity reviews the Concept Development from Lessons 9, 10, and 22.

  T: (Write 174 × 2 = _____.) On your personal white board, solve the multiplication sentence using the standard algorithm.
  S: What are 4 factors of 348 you know right away?
  S: 1 and 348, 2 and 174.

Repeat the process using the following possible sequence: 348 × 2, 696 × 2, and 1,392 × 2. Students may realize that if 348 is a factor of 696, then 174 is, too!

Prime or Composite? (2 minutes)

Materials: (S) Personal white board

Note: This fluency activity reviews Lesson 22's Concept Development.

  T: (Write 7.) Is it prime or composite?
  S: Prime.
  T: Write the factor pair of 7.
  S: (Write 1 and 7.)
  T: (Write 12.) Is it prime or composite?
  S: Composite.
  T: Write the factor pairs of 12.
  S: (Write 1 and 12, 2 and 6, 3 and 4.)

> **NOTES ON MULTIPLE MEANS OF ENGAGEMENT:**
>
> Allow English language learners and others more time to compose their written response. Alternatively, have students discuss their reasoning with a partner.
>
> Challenge students working above grade level to identify the prime and composite numbers in the seventies and sixties. Ask, "What do you notice?"

Repeat the process for the following possible sequence: 15, 17, and 21.

Application Problem (5 minutes)

Sasha says that every number in the twenties is a composite number because 2 is even. Amanda says there are two prime numbers in the twenties. Who is correct? How do you know?

Note: This Application Problem bridges Lesson 22's work with using division to determine prime and composite numbers to this lesson's objective of using division patterns to determine factors of numbers.

Lesson 23:   Use division and the associative property to test for factors and observe patterns.

©2018 Great Minds®. eureka-math.org

EUREKA MATH™

Concept Development (33 minutes)

Materials: (S) Personal white board

Problem 1: Use division to find factors of larger numbers.

> T: Find the unknown factor: 28 = 7 × ___.
>
> S: 4.
>
> T: How did you find the unknown factor?
>
> S: I know my fours facts. → I divided 28 by 7.
>
> T: Is 10 a factor of 28?
>
> S: No.
>
> T: How do you know?
>
> S: Two times 10 is 20, and 3 times 10 is 30. → If you divide 28 by 10, you get a remainder.
>
> T: How can I find out if 3 is a factor of 54?
>
> S: We can divide 54 by 3.
>
> T: What if I get a remainder?
>
> S: If there is a remainder, then 3 isn't a factor. → As long as there's no remainder, you can write 54 as 3 times a whole number. → Yeah, it's 3 times the quotient.

Allow time for students to divide with their partner.

> S: Fifty-four can be divided by 3 evenly. → Three is a factor of 54 because there is no remainder.
>
> T: How can we determine if 2 is a factor of 54?
>
> S: We can divide like we did for 3. → Two is an even number, so it goes evenly into 54. → Two is a factor of every even number and 54 is even, so 2 has to be one of its factors.
>
> T: Use division to find out if 3 is a factor of 78, if 4 is a factor of 94, and if 3 is a factor of 87.

Quickly debrief the questions to ascertain that 3 is a factor of 78 and 87, but 4 is not a factor of 94.

Problem 2: Use the associative property to find additional factors of larger numbers.

> T: Talk to your partner. Is it necessary to divide to figure out if 5 is a factor of 54?
>
> S: Fifty-four can't be divided by 5 exactly. There is a remainder. → When you count by fives, each number ends with 5 or 0. Fifty-four does not end with 0 or 5. Five isn't a factor of 54.
>
> T: We divided to determine if 3 was a factor of 54, but for 2 and 5 we don't need to divide. Explain to your partner why not.
>
> S: The even numbers all have 2 for a factor. → If the digit in the ones place is odd, the number doesn't have 2 as a factor. → Numbers with 5 as a factor have 0 or 5 as a digit in the ones place. → We can use patterns for 2 and 5.
>
> T: How can we know if 6 a factor of 54?
>
> S: Six times 9 equals 54.

EUREKA MATH™

Lesson 23: Use division and the associative property to test for factors and observe patterns.

©2018 Great Minds®. eureka-math.org

325

T: Earlier we saw that 2 and 3 are both factors of 54. Talk to your partner. Is this number sentence true?

T: (Write 54 = 6 × 9 = (2 × 3) × 9.)

S: (Share ideas.)

T: Let's write it vertically so that it is very easy to see how the factor 6 is related to 2 times 3.

T: (Write the problem as modeled to the right.) Now let's move the parentheses so that 3 associates with 9 rather than 2. Three times 9 is?

S: 27.

T: Find the product of 2 and 27. (Pause.) Is it true that 2 times 27 equals 54?

S: Yes!

T: We used the **associative property** to show that both 2 and 3 are factors of 54.

T: Let's test this method to see if it works with a number other than 54. Forty-two is 6 times…?

S: 7.

T: Let's use the associative property to see if 2 and 3 are also factors of 42.

T: (Write 42 = 6 × 7.) How will we rewrite 6?

S: 2 × 3.

T: (Beneath 6 × 7, write = (2 × 3) × 7.) Let's now move the parentheses to first multiply 3 times 7, to associate 3 with 7 rather than 2. 3 times 7 is?

S: 21.

T: Find the product of 2 and 21. (Pause.) Is it true that 2 times 21 equals 42?

S: Yes!

Record the thought process as shown to the right. Have students use the associative property to prove that since 6 is a factor of 60, both 2 and 3 are also factors.

Problem 3: Use division or the associative property to find factors of larger numbers.

T: Multiply 6 times 12. (Pause.) The answer is…?

S: 72.

T: Using either division or the associative property, work with your partner to prove that since 6 is a factor of 72, 2 and 3 are also factors.

S: Seventy-two is even, so 2 is a factor. I can use long division to find 72 divided by 3 is 24, so 3 is a factor. → I wrote 72 equals 6 times 12 as 72 equals 2 times 3 times 12. Using the associative property works. I know 2 and 3 are factors of 72 because 6 is a factor of 72.

326   Lesson 23:   Use division and the associative property to test for factors and
                                  observe patterns.

                                                                            EUREKA
                                                                            MATH™

Problem Set (10 minutes)

Students should do their personal best to complete the Problem Set within the allotted 10 minutes. For some classes, it may be appropriate to modify the assignment by specifying which problems they work on first. Some problems do not specify a method for solving. Students should solve these problems using the RDW approach used for Application Problems.

Student Debrief (10 minutes)

Lesson Objective: Use division and the associative property to test for factors and observe patterns.

The Student Debrief is intended to invite reflection and active processing of the total lesson experience.

Invite students to review their solutions for the Problem Set. They should check work by comparing answers with a partner before going over answers as a class. Look for misconceptions or misunderstandings that can be addressed in the Debrief. Guide students in a conversation to debrief the Problem Set and process the lesson.

Any combination of the questions below may be used to lead the discussion.

- How did answering Problem 1, Part (a) help you answer Problem 1, Part (b)? Was it necessary to divide?

- What relationship do you notice between Problem 1, Parts (a), (c), and (e)? What about between Problem 1, Parts (d), (f), and (h)?

- Discuss with your partner what is similar and what is different about Problem 1, Parts (a), (c), and (e) and Problem 1, Parts (d), (f), and (h).

- What's the difference between the statements in Problem 4? Why is one false and the other true?

- When we divided 72 by 3, we saw that there was no remainder. Another way to say that is "72 is divisible by 3." Is 24 divisible by 3? Is 25 divisible by 3?

Lesson 23:   Use division and the associative property to test for factors and observe patterns.

327

©2018 Great Minds®. eureka-math.org

- We can use number patterns to determine if 2 and 5 are factors of other numbers. What other numbers do you think have patterns? Do you see a pattern for determining which numbers 3 is a factor of? Can you describe one?
- If 8 is a factor of 96, what other numbers must also be factors of 96? How can we use the **associative property** to prove this?
- Once someone tried to tell me that the two statements in Problem 4 say the same thing. How would you explain that the two statements are different?

Exit Ticket (3 minutes)

After the Student Debrief, instruct students to complete the Exit Ticket. A review of their work will help with assessing students' understanding of the concepts that were presented in today's lesson and planning more effectively for future lessons. The questions may be read aloud to the students.

328

329

2. Use the associative property to find more factors of 24 and 36.

a. $24 = 12 \times 2$

$= (\underline{\quad} \times 3) \times 2$

$= \underline{\quad} \times (3 \times 2)$

$= \underline{\quad} \times 6$

$= \underline{\quad}$

b. $36 = \underline{\quad} \times 4$

$= (\underline{\quad} \times 3) \times 4$

$= \underline{\quad} \times (3 \times 4)$

$= \underline{\quad} \times 12$

$= \underline{\quad}$

3. In class, we used the associative property to show that when 6 is a factor, then 2 and 3 are factors, because $6 = 2 \times 3$. Use the fact that $8 = 4 \times 2$ to show that 2 and 4 are factors of 56, 72, and 80.

$56 = 8 \times 7$ $\qquad$ $72 = 8 \times 9$ $\qquad$ $80 = 8 \times 10$

4. The first statement is false. The second statement is true. Explain why, using words, pictures, or numbers.

If a number has 2 and 4 as factors, then it has 8 as a factor.
If a number has 8 as a factor, then both 2 and 4 are factors.

Lesson 24

Objective: Determine if a whole number is a multiple of another number.

Suggested Lesson Structure

■ Fluency Practice   (12 minutes)
■ Application Problem   (5 minutes)
■ Concept Development   (33 minutes)
■ Student Debrief   (10 minutes)
  Total Time   **(60 minutes)**
Fluency Practice (12 minutes)

▪ Group Counting   (5 minutes)
▪ Prime or Composite?   (2 minutes)
▪ Test for Factors   (5 minutes)

Group Counting (5 minutes)

Note: Group counting reviews factors and patterns that students use during the Concept Development.

Direct students to count forward and backward, occasionally changing the direction of the count.

- Twos to 20
- Threes to 30
- Fours to 40
- Fives to 50
- Sixes to 60
- Tens to 100

Prime or Composite? (2 minutes)

Materials: (S) Personal white board

Note: This fluency activity reviews Lesson 22's Concept Development.

Repeat the process from Lesson 23 for the following possible sequence: 5, 15, 12, 19, and 24.

334   Lesson 24:   Determine if a whole number is a multiple of another number.

©2018 Great Minds®. eureka-math.org

EUREKA
MATH™

Test for Factors (5 minutes)

Materials: (S) Personal white board

Note: This fluency activity reviews Lesson 23's content.

    T: (Project 30, 45, 48, and 56.) On your personal white board, write the number that has 10 as a factor.

    S: (Write 30.)

    T: Write the division equations that prove both 5 and 2 are factors of 30.

    S: (Write $30 \div 5 = 6$ and $30 \div 2 = 15$.)

    T: Write the numbers that have 6 as a factor.

    S: (Write 30 and 48.)

    T: Prove that both 3 and 2 are factors of 30 and 48, using the associative property.

    S: (Write $30 \div 3 = 10$, $30 \div 2 = 15$, $48 \div 3 = 16$, and $48 \div 2 = 24$.)

    T: Write the numbers that have 8 as a factor.

    S: (Write 48 and 56.)

    T: Prove that both 4 and 2 are factors of 48 and 56, using the associative property.

Application Problem (5 minutes)

$8 \text{ cm} \times 12 \text{ cm} = 96$ square centimeters. Imagine a rectangle with an area of 96 square centimeters and a side length of 4 centimeters. What is the length of its unknown side? How will it look when compared to the 8 centimeter by 12 centimeter rectangle? Draw and label both rectangles.
Note: This Application Problem relates finding factors (Lessons 22 and 23) to multiples (Lesson 24). Consider leading students to visualize the columns of 4 or 8 square centimeters. When counting by the number of squares in those columns, will the count arrive exactly at 96? When counting by the number of squares in one row, 24 or 12, will the count also arrive exactly at 96? (Consider using graph paper to demonstrate for those students who would benefit from pictorial representation.)

Also consider showing students how the associative property beautifully illustrates how as the 8 is split in two, the 12 doubles (pictured to the right).

$$96 = 8 \times 12$$
$$= (4 \times 2) \times 12$$
$$= 4 \times (2 \times 12)$$
$$= 4 \times 24$$
$$= 96$$

Concept Development (33 minutes)

Materials: (S) Personal white board, crayons

Problem 1: Determine the meaning of the word *multiple*.

T: Turn to your partner and count by fours, taking turns with each new number. So, for example, you start by saying 0, your partner says 4, then you say 8. You have one minute. Ready? Begin.

S: (Skip-count with partners for one minute.)

T: Stop. What number did you count up to?

S: (Responses will vary.)

T: Good! Tell me some things you noticed.

S: We started by saying the 4 times table, then kept adding on 4. → There was a pattern with how the numbers ended. → When we got to 100, the counting started over again. Just like we started with 0, 4, 8, 12, after 100 it was 104, 108, 112, and so on.

0, 8, 16, 24, 32 40, 48, 56, 64, 72 80, 88, 96, 104, 112 120, 128, 136, ...

4, 12, 20, 28, 36 44, 52, 60, 68, 76, 84, 92, 100, 108, 116, 124, 132, 140 ...

T: Those are nice observations. Let's try that again, beginning where you left off. This time, as you count, think about what patterns there are. Ready? Begin.

S: (Skip-count with their partners for another minute.)

T: When we skip-count by a whole number, the numbers that we say are called *multiples*.

T: Talk to your partner about what you noticed.

S: All of the multiples of 4 were even numbers. → No matter how high we counted, we kept adding on 4 more. → The digit in the ones place of every number followed its own pattern. It went 0, 4, 8, 2, 6, over and over again.

T: Excellent discoveries! This pattern in the ones place continues forever! Why?

S: Because it is always 4 more. → If that's what has been happening, then the same things will keep happening. → It worked up to 1 hundred, and the ones and tens place will continue with the same pattern, so it will even work in the two hundreds and three hundreds. → Four times 25 is 100, so then in every hundred it repeats, so it just keeps going in a cycle!

T: How is a multiple different from a factor?

S: When we found the factors of a number, we listed them and then we were done. With multiples, we could keep going forever and ever!

Lesson 24:   Determine if a whole number is a multiple of another number.

EUREKA MATH
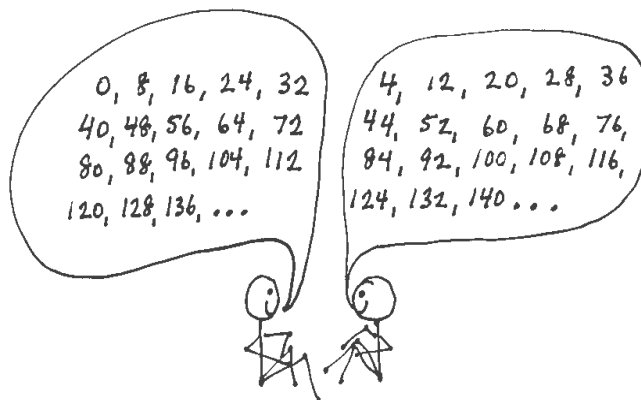

Problem 2: Determine if one number is a multiple of another number, and list multiples of given numbers.

T: Why is 24 a multiple of 4?

S: When we count by fours we get to 24. → 4 times 6 is 24. → Four is a factor of 24.

T: Is 24 a multiple of 5?

S: No, because we can't skip-count by five to 24. →
No, because 24 divided by 5 has a remainder. →
No, because 5 is a not a factor of 24.

T: What about 8? Is 24 a multiple of 8?

S: Yes! Eight times 3 is 24. → Well, 8 is a factor of
24, so 24 must be a multiple of 8.

T: We know 96 is a multiple of 4 from our Application
Problem, since 4 times 24 is 96. What did we do to
figure that out?

S: I used long division. → I used the associative
property.

T: Yes, because for some it is beyond mental math.
How can we find out if 96 is a multiple of 3?

S: We can divide to see if 96 is divisible by 3. → We
might use the associative property since we know that
8 times 12 and 4 times 24 are 96 from the Application
Problem.

T: Try that.

Allow time for students to divide or use the associative
property.

T: What did you discover?

S: There was no remainder, so 3 is a factor of 96.
That makes 96 a multiple of 3.

T: What is the factor pair of 3?

S: 32.

T: If you count by 32 three times, will you get to 96?

S: Yes.

T: Is 96 a multiple of both 3 and 32?

S: Yes!

T: List the first five multiples of 3.

S: (Write 3, 6, 9, 12, 15.)

T: What number did you begin with?

S: 3.

T: But isn't 0 a multiple of 3? Should we start with 0 first?

S: No. It's less. → But 0 times 3 is 0, so maybe.

$$\begin{array}{r} 32 \\ 3\overline{)96} \\ \underline{-9} \\ 06 \\ \underline{-6} \\ 0 \end{array}$$

$$\begin{aligned} 96 &= 12 \times 8 \\ &= (3 \times 4) \times 8 \\ &= 3 \times (4 \times 8) \\ &= 3 \times 32 \\ &= 96 \end{aligned}$$

$$\begin{aligned} 96 &= 24 \times 4 \\ &= (3 \times 8) \times 4 \\ &= 3 \times (8 \times 4) \\ &= 3 \times 32 \\ &= 96 \end{aligned}$$

**NOTES ON
MULTIPLE MEANS
OF REPRESENTATION:**

Students who struggle with the
difference between a factor and a
multiple might benefit from creating a
three-column chart that lists numbers
in the first column, factors in the
second, and then multiples in the third,
always followed by an ellipsis to
remember the infinite number of
multiples of any number. Students can
refer to this visual representation as
they complete the lesson and as they
think about how factors and multiples
are related.

#	factors	multiples
4	1,2,4	4,8,12,16…
9	1,3,9	9,18,27,36…
12	1,2,3,4,6,12	12,24,36,48…

**EUREKA
MATH™**

Lesson 24:   Determine if a whole number is a multiple of another number.

337

©2018 Great Minds®. eureka-math.org

T: Since zero times any number is zero, zero is a multiple of every number, so we *could* consider it the first multiple of every number. However, when we skip-count, we usually start with the number we're counting by. So, we usually think of the number itself, in this case 3, as the first multiple, instead of 0. That way, the first multiple is 1×3, the second is 2×3, and so on.

(Optional) Problem 3: Use the associative property to see that any multiple of 6 is also a multiple of 3 and 2.

T: Shout out a multiple of 6.

S: 12. $\rightarrow$ 30. $\rightarrow$ 60. $\rightarrow$ 24. $\rightarrow$ 600.

T: Is any multiple of 6 also a multiple of 2 and 3?

T: Let's use the associative property (and commutative property) to find out. (Write the following.)

T: $60 = 10 \times 6$

$= 10 \times (2 \times 3)$

$= (10 \times 2) \times 3 = 20 \times 3$

Yes, 60 is a multiple of 3. If we count by 3 twenty times, we get to 60.

$= (10 \times 3) \times 2 = 30 \times 2$

Yes, 60 is a multiple of 2. If we count by 2 thirty times, we get to 60.

T: Let's use a letter to represent the number of sixes to see if this is true for all sixes. (Write the following three equations on the board.)

$n \times 6 = n \times (2 \times 3)$

$n \times 6 = (n \times 2) \times 3$

$n \times 6 = (n \times 3) \times 2$

T: Discuss with your partner why these equations are true. You might try plugging in 4 or 5 as the number of sixes, n, to help you understand.

S: Wow! These equations are true. It's just that it takes twice as many threes to get to the multiple as sixes. $\rightarrow$ Yeah, it's double the number of multiples of six, $2 \times n$. $\rightarrow$ And it's three times as many twos to get there! It's because twos are smaller units so it takes more.

T: So, maybe the multiples of a number are also the multiples of its factors.

> **NOTES ON MULTIPLE MEANS OF REPRESENTATION:**
>
> When using the associative property, consider bringing the word to life by asking three students to stand at the front of the class in a line. Ask the person in the middle to associate with the person on the right. Ask them to associate with the person on their left. Ask those on the ends to associate.
>
> - What changed? (The associations.)
>
> Next, give each person an identity as a factor, perhaps 9, 2, and 5 respectively. Have the factor of 2 first associate with the 9 and then with the five. Then, have the 9 and 5 associate.
>
> - Which is easiest: 18 times 5, 9 times 10, or 45 times 2?

If there is time, consider repeating the process with the multiples of 8 being multiples of both 2 and 4. Students might approach the generalization that the multiples of a given number include the multiples of the number's factors.

EUREKA MATH™

Problem Set (10 minutes)

Students should do their personal best to complete the Problem Set within the allotted 10 minutes. For some classes, it may be appropriate to modify the assignment by specifying which problems they work on first.
Some problems do not specify a method for solving. Students should solve these problems using the RDW approach used for Application Problems.

Student Debrief (10 minutes)

Lesson Objective: Determine if a whole number is a multiple of another number.

The Student Debrief is intended to invite reflection and active processing of the total lesson experience.

Invite students to review their solutions for the Problem Set. They should check work by comparing answers with a partner before going over answers as a class. Look for misconceptions or misunderstandings that can be addressed in the Debrief. Guide students in a conversation to debrief the Problem Set and process the lesson.

Any combination of the questions below may be used to lead the discussion.

- What strategy did you use in Problem 2?
- In Problem 5, Parts (c) and (d), what patterns did you discover about multiples of 5 and 10?
- Explain the difference between factors and multiples.
- Which number is a multiple of *every* number?
- In Problem 1, which multiples were the easiest to write: the fives, fours, or sixes? Why?
- How can the associative property help you to know if a number is a multiple of another number?
- Did anybody answer *no* on Problem 4? What about 1? Are prime numbers multiples of 1?
- In the lesson, we found that when counting by fours, the multiples followed a pattern of having 0, 4, 8, 2, and 6 in the ones digit. Does that mean any even number is a multiple of 4?

- Are the following true?
    - 3 is a factor of 12.
    - 12 is a multiple of 3.
    - 12 is divisible by 3.

Exit Ticket (3 minutes)

After the Student Debrief, instruct students to complete the Exit Ticket. A review of their work will help with assessing students' understanding of the concepts that were presented in today's lesson and planning more effectively for future lessons. The questions may be read aloud to the students.

    a. Write the multiples of 5 starting from 75.

    b. Write the multiples of 4 starting from 40.

    c. Write the multiples of 6 starting from 24.

2. List the numbers that have 30 as a multiple.

3. Use mental math, division, or the associative property to solve. (Use scratch paper if you like.)

    a. Is 12 a multiple of 3? _____   Is 3 a factor of 12? _____

    b. Is 48 a multiple of 8? _____   Is 48 a factor of 8? _____

    c. Is 56 a multiple of 6? _____   Is 6 a factor of 56? _____

4. Can a prime number be a multiple of any other number except itself? Explain why or why not.

Lesson 24:   Determine if a whole number is a multiple of another number.

EUREKA
MATH™

5. Follow the directions below.

1	2	3	4	5	6	7	8	9	10
11	12	13	14	15	16	17	18	19	20
21	22	23	24	25	26	27	28	29	30
31	32	33	34	35	36	37	38	39	40
41	42	43	44	45	46	47	48	49	50
51	52	53	54	55	56	57	58	59	60
61	62	63	64	65	66	67	68	69	70
71	72	73	74	75	76	77	78	79	80
81	82	83	84	85	86	87	88	89	90
91	92	93	94	95	96	97	98	99	100

a. Underline the multiples of 6. When a number is a multiple of 6, what are the possible values for the ones digit?

b. Draw a square around the multiples of 4. Look at the multiples of 4 that have an odd number in the tens place. What values do they have in the ones place?

c. Look at the multiples of 4 that have an even number in the tens place. What values do they have in the ones place? Do you think this pattern would continue with multiples of 4 that are larger than 100?

d. Circle the multiples of 9. Choose one. What do you notice about the sum of the digits?
    Choose another one. What do you notice about the sum of the digits?

Lesson 25

Objective: Explore properties of prime and composite numbers to 100 by using multiples.

Suggested Lesson Structure

■ Fluency Practice   (12 minutes)
■ Concept Development (30 minutes)
■ Student Debrief   (18 minutes)
 Total Time   **(60 minutes)**
Fluency Practice (12 minutes)

▪ Test for Factors   (5 minutes)
▪ Multiples Are Infinite   (5 minutes)
▪ List Multiples and Factors   (2 minutes)

Test for Factors (5 minutes)

Materials: (S) Personal white board

Note: This fluency activity reviews Lesson 23's content.

 T: (Project 40, 64, 54, and 42.) On your personal white board, write the number that has 10 as a factor.
 S: (Write 40.)
 T: Use division to prove both 4 and 2 are factors of 40.
 T: Write the numbers that have 6 as a factor.
 S: (Write 54 and 42.)
 T: Prove that both 3 and 2 are factors of 54 and 42, using the associative property.
 T: Write the numbers that have 8 as a factor.
 S: (Write 40 and 64.)
 T: Prove that both 4 and 2 are factors of 40 and 64, using the associative property.

EUREKA
MATH™

Multiples Are Infinite (5 minutes)

Have students make groups of four. Assign each foursome a different number to count by starting at 0. Allow students two minutes to count round robin in their groups.

T: Let's share our results. (Call on each group to share.)

T: Could you have kept counting by (assigned number) after I told you to stop?

S: Yes, because we just kept adding on (assigned number) more. → Yes, because you can keep counting forever.

T: (Allow all groups to share.) We now know the multiples for *any* number are infinite—they go on forever. How is that different from the factors of a number? Turn and talk to your partner about this question.

S: Every number has only a certain amount of factors but an unlimited number of multiples. → The number of factors any number has is finite, but the number of multiples is infinite.

List Multiples and Factors (2 minutes)

Materials: (S) Personal white board

Note: This fluency activity gives students practice in remembering the difference between factors and multiples.

T: (Write 3.) List as many multiples of 3 as you can in the next 20 seconds. Take your mark. Get set. Go.

S: (Write 3, 6, 9, 12, 15, 18, 21, 24, ….)

T: List the factors of 3.

S: (Write 1, 3.)

Continue with the following possible sequence: multiples of 4, factors of 4; multiples of 5, factors of 5.

Concept Development (30 minutes)

Materials: (T) Sieve (for the Student Debrief) (S) Problem Set, orange crayon, red crayon

Note: Use the Problem Set to guide this lesson's content.

T: Let's take a look at the number chart in front of you. What is the smallest prime number you see on the chart?

S: Two.

T: What is the greatest composite number you see? How do you know?

S: One hundred, because it is even. → One hundred, because all even numbers greater than 2 have 2 as a factor, so they have to be composite numbers.

T: Excellent! Now, working with your partner, read and follow all of the directions at the top of the first page of the Problem Set. Be sure to follow the directions in order, and check with each other to see that you complete each activity the same way. If you find that you have different responses at times, talk about it to see what the correct thing to do is.

EUREKA MATH™

Lesson 25:   Explore properties of prime and composite numbers to 100 by using multiples.

©2018 Great Minds®. eureka-math.org

347

As students are charged with determining multiples that are greater than those in the times tables, some will choose to continue adding on, while others will choose to divide, and some will begin to rely on number patterns they have noticed. Encourage partners to compare strategies.

Note: At a certain point, the majority of students will have finished marking off multiples of 7. A few may have begun to notice that the multiples of the remaining numbers have already been crossed off. Interrupt the class at this point. Below is the suggested midpoint dialogue.

T: After you marked off multiples of 7, what was the next number that you circled?

S: 11.

T: Were there any multiples of 11 that hadn't been crossed out already?

S: No.

T: What about 13? Are there any multiples of 13 that still need to be crossed off?

S: No, they're already crossed off from before.

T: I wonder if that's true of the rest? Go back to 11. Let's see if we can figure out what happened. Count by elevens within 100 using the chart.

S: 11, 22, 33, 44, 55, …, 99.

T: Ninety-nine is how many elevens?

S: 9 elevens.

T: So, by the time we circled 11, is it true that we'd already marked all of the multiples of 2, 3, all the way up to 10?

S: Well, yeah, we circled 2, 3, 5, and 7, and crossed off their multiples. → We didn't have to do fours, because the fours got crossed out when we crossed out multiples of 2. → The same thing happened with the sixes, eights, nines, and tens.

T: Interesting, so we had already crossed out 2 × 11, 3 × 11, all the way up to 9 × 11. I wonder if the same thing happens with 13. Discuss with a partner: Will there be more or fewer groups of 13 than groups of 11 within a hundred?

S: More, because it is a bigger number. → Fewer, because it is a larger number so fewer will fit in 100. → Fewer because 9 × 11 is 99, so maybe 7 or 8 times 13 will be less than 100. → 9 × 13 is more than 100, so fewer groups.

T: Take a moment to figure out how many multiples of 13 are within 100.

S: (Might count by 13 or multiply.)

T: How many multiples of 13 are less than 100?

S: 7.

T: 7 times 13 is…?

S: 91.

T: We already marked off 91 because it is a multiple of 7. The same is true for 6 × 13, 5 × 13, and so on. Do we need to mark off multiples of 17?

S: No, because there will be even fewer groups, and we already marked off those factors.

T: Exactly. The highest multiple of 17 on the hundreds chart is 85. 5 seventeens is 85. We already marked 2 × 17 up to 5 × 17.

Lesson 25:   Explore properties of prime and composite numbers to 100 by using multiples.

EUREKA MATH™

Following this dialogue, have students return to work. Once students have correctly completed page 1, have them continue to page 2. Allow students time to thoroughly discuss and answer each question. Circulate and offer assistance as needed. Be ready to initiate or prompt discussions when students seem unsure. Answer questions with questions to keep students thinking and analyzing.

Regroup, as the class completes page 2, to share responses to the Student Debrief questions.

Problem Set

Please note that the Problem Set comprises only questions used in the Concept Development. No additional time is allotted here since all problems are completed during the lesson. The Student Debrief has additional time allotted for the purpose of whole-class discussion of questions raised and discoveries made by the students during the Concept Development.

Student Debrief (18 minutes)

Lesson Objective: Explore properties of prime and composite numbers to 100 by using multiples.

The Student Debrief is intended to invite reflection and active processing of the total lesson experience.

Invite students to review their solutions for the Problem Set. They should check work by comparing answers with a partner before going over answers as a class. Look for misconceptions or misunderstandings that can be addressed in the Debrief. Guide students in a conversation to debrief the Problem Set and process the lesson.

Any combination of the questions below may be used to lead the discussion .

- ▪ Which numbers are circled? Which numbers are crossed out?
- ▪ We started this Problem Set by coloring number 1 red and beginning our work with the multiples of 2. Why didn't we cross out the multiples of 1?
- ▪ Are any prime numbers even? Are all odd numbers prime?
- ▪ We crossed off multiples of 2, 3, 5, and 7. Why didn't we have to cross off multiples of 4 or 6?
- ▪ How did you know some of the larger numbers, like 53 and 79, were prime?

- How can we find the prime numbers between 1 and 200?
- The process of crossing out multiples to find primes is called the s*ieve of Eratosthenes*. Eratosthenes was an ancient Greek mathematician. Why do you think this is called a sieve (show a sieve to the students)?

Exit Ticket (3 minutes)

After the Student Debrief, instruct students to complete the Exit Ticket. A review of their work will help with assessing students' understanding of the concepts that were presented in today's lesson and planning more effectively for future lessons. The questions may be read aloud to the students.

2.
a. List the circled numbers.

2,3,5,7, 11,13 ,17,19, 23,29, 31,37, 41,43, 47, 53,59, 61, 67,71,73, 79,83,89,97

b. Why weren't the circled numbers crossed off along the way?

The circled numbers were not crossed off along the way because they are not multiples of any other numbers besides 1 and themselves.

c. Except for the number 1, what is similar about all of the numbers that were crossed off?

The crossed off numbers are all Composite numbers.

d. What is similar about all of the numbers that were circled?

The circled numbers are all prime numbers.

Topic G
Division of Thousands, Hundreds, Tens, and Ones

Focus Standards:	■	Solve multistep word problems posed with whole numbers and having whole-number answers using the four operations, including problems in which remainders must be interpreted. Represent these problems using equations with a letter standing for the unknown quantity. Assess the reasonableness of answers using mental computation and estimation strategies including rounding.
	■	Find whole-number quotients and remainders with up to four-digit dividends and one-digit divisors, using strategies based on place value, the properties of operations, and/or the relationship between multiplication and division. Illustrate and explain the calculation by using equations, rectangular arrays, and/or area models.
Instructional Days:	8	
Coherence -Links from:	G3–M1	Properties of Multiplication and Division and Solving Problems with Units of 2–5 and 10
	G3–M3	Multiplication and Division with Units of 0, 1, 6–9, and Multiples of 10
-Links to:	G5–M2	Multi-Digit Whole Number and Decimal Fraction Operations

Topic G extends to division with three- and four-digit dividends using place value understanding. Students begin the topic by connecting multiplication of 10, 100, and 1,000 by single-digit numbers from Topic B to division of multiples of 10, 100, and 1,000 in Lesson 26. Using unit language, students find their division facts allow them to divide much larger numbers.

In Lesson 27, place value disks support students visually as they decompose each unit before dividing. This lesson contains a first-use script on the steps of solving long division using place value disks and the algorithm in tandem for three- and four-digit dividends. Take note how patterning develops with these larger numbers.

EUREKA
MATH™
Students then move to the abstract level in Lessons 28 and 29, recording long division with place value understanding, first of three-digit, then four-digit numbers using small divisors. In Lesson 30, students practice dividing when zeros are in the dividend or in the quotient.

Lessons 31 and 32 give students opportunities to apply their understanding of division by solving word problems. In Lesson 31, students identify word problems as *number of groups unknown* or *group size unknown*, modeled using tape diagrams. Lesson 32 allows students to apply their place value understanding of solving long division using larger divisors of 6, 7, 8, and 9. Concluding this topic, Lesson 33 has students make connections between the area model and the standard algorithm for long division.

A Teaching Sequence Toward Mastery of Division of Thousands, Hundreds, Tens, and Ones
Objective 1: Divide multiples of 10, 100, and 1,000 by single-digit numbers.   **(Lesson 26)**
Objective 2: Represent and solve division problems with up to a three-digit dividend numerically and with place value disks requiring decomposing a remainder in the hundreds place.   **(Lesson 27)**
Objective 3: Represent and solve three-digit dividend division with divisors of 2, 3, 4, and 5 numerically.   **(Lesson 28)**
Objective 4: Represent numerically four-digit dividend division with divisors of 2, 3, 4, and 5, decomposing a remainder up to three times.   **(Lesson 29)**
Objective 5: Solve division problems with a zero in the dividend or with a zero in the quotient.   **(Lesson 30)**
Objective 6: Interpret division word problems as either *number of groups unknown* or *group size unknown*.   **(Lesson 31)**
Objective 7: Interpret and find whole number quotients and remainders to solve one-step division word problems with larger divisors of 6, 7, 8, and 9.   **(Lesson 32)**
Objective 8: Explain the connection of the area model of division to the long division algorithm for three- and four-digit dividends.   **(Lesson 33)**

Lesson 26

Objective: Divide multiples of 10, 100, and 1,000 by single-digit numbers.

Suggested Lesson Structure

■ Fluency Practice   (12 minutes)
■ Application Problem   (5 minutes)
■ Concept Development   (30 minutes)
■ Student Debrief   (13 minutes)

  Total Time   **(60 minutes)**
Fluency Practice (12 minutes)

▪ Show Values with Place Value Disks   (4 minutes)
▪ Group Counting   (2 minutes)
▪ List Multiples and Factors   (2 minutes)
▪ List Prime Numbers   (4 minutes)

Show Values with Place Value Disks (4 minutes)

Materials: (T) Thousands place value chart (Lesson 4 Template) (S) Personal white board, thousands place value chart (Lesson 4 Template)

Note: This fluency activity prepares students for this lesson's Concept Development.

Repeat the process from Lesson 15 with the following possible sequence (projected or drawn).

  ▪ 1 hundreds disk, 2 tens disks, and 3 ones disks
  ▪ 4 hundreds disks, 1 tens disk, and 3 ones disks
  ▪ 3 hundreds disks, 15 tens disks, and 2 ones disks
  ▪ 2 hundreds disks, 15 tens disks, and 3 ones disks

Follow by having students draw disks for 524, 231, and 513.

EUREKA
MATH™

Group Counting (2 minutes)

Note: Group counting reviews factors and multiples.

Direct students to count forward and backward, occasionally changing the direction of the count.

- Threes to 30
- Fours to 40
- Sixes to 60
- Eights to 80

List Multiples and Factors (2 minutes)

Materials: (S) Personal white board

Note: This fluency activity reviews Topic F's content and gives students practice in remembering the difference between factors and multiples.

Repeat the process from Lesson 25 with the following possible sequence: 4 multiples of 6 starting from 60, the 4 factors of 6, the 4 factors of 8, 4 multiples of 8 starting at 80, the 3 factors of 9, and 4 multiples of 9 starting at 90.

List Prime Numbers (4 minutes)

Materials: (S) Paper

Note: This fluency activity reviews Lesson 25's Concept Development.

- T: What's the smallest prime number?
- S: 2.
- T: On your paper, write 2.
- T: Are there any other even prime numbers?
- S: No.
- T: On your paper, list the prime numbers in order from least to greatest, beginning with 2. You have one minute.
- S: (List the prime numbers.)
- T: Compare your list with your partner's. Look for differences in your lists and decide who is correct. Make changes to your lists as needed. You have two minutes.

Application Problem (5 minutes)

A coffee shop uses 8-ounce mugs to make all of its coffee drinks. In one week, they served 30 mugs of espresso, 400 lattes, and 5,000 mugs of coffee. How many ounces of coffee drinks did they make in that one week?

8×30
$= 8 \times (3 \times 10)$
$= (8 \times 3) \times 10$
$= 24 \times 10$
$= 240$

8×400
$= 8 \times (4 \times 100)$
$= (8 \times 4) \times 100$
$= 32 \times 100$
$= 3,200$

8×5000
$= 8 \times (5 \times 1000)$
$= (8 \times 5) \times 1000$
$= 40 \times 1000$
$= 40,000$

```
  40,000
   3,200
 +   240
  43,440
```

The coffee shop made 43,440 ounces of coffee drinks in one week.

Note: By reviewing multiplication of 10, 100, and 1,000, this Application Problem leads up to today's Concept Development, which will explore division of multiples of 10, 100, and 1,000.

Concept Development (30 minutes)

Materials: (T) Thousands place value chart for dividing (Template) (S) Personal white board, thousands place value chart for dividing (Template)

Problem 1

9 ÷ 3 and 90 ÷ 3

900 ÷ 3 and 9,000 ÷ 3

Display 9 ÷ 3 and 90 ÷ 3.

> T: Let's draw place value disks to represent these expressions. Solve. Compare your models to your partner's.
> T: Give me a number sentence for each in unit form.
> S: 9 ones ÷ 3 = 3 ones. 9 tens ÷ 3 = 3 tens.

Display 900 ÷ 3 and 9,000 ÷ 3.

> T: Tell your partner how you might model these two expressions.
> S: It's just like we did for the last problems. We represented 9 disks and divided them into 3 groups. Our disks will be in the hundreds or in the thousands. We won't have a remainder because 3 is a factor of 9.

> **NOTES ON MULTIPLE MEANS OF ENGAGEMENT:**
>
> Students who still need visual support to divide may be allowed to draw place value disks or to use concrete place value disks.

9 ones ÷ 3 = 3 ones

9 tens ÷ 3 = 3 tens

9 hundreds ÷ 3 = 3 hundreds

9 thousands ÷ 3 = 3 thousands

EUREKA MATH™
T: Model these expressions, using place value disks, with your partner.

S: (Draw disks and divide.)

T: What do you notice?

S: All 9 disks were split into 3 groups of 3, but they are groups of different units.

T: Write these number sentences in unit form. Turn and talk with your partner about what you notice.

S: They all look similar. → They are the same with different units. → They are all solved with 9 divided by 3; they just have different units.

Problem 2

$500 \div 5$

$350 \div 5$

$3{,}000 \div 5$

Display $500 \div 5$.

T: On your personal white board, rewrite the expression $500 \div 5$ in unit form.

S: (Write 5 hundreds $\div$ 5.)

T: Why don't you need a pencil and paper to solve this problem?

S: Because 5 divided by 5 is 1, and the unit is hundreds. The answer is 1 hundred. → Five of anything divided by 5 is 1. → Yeah, 5 bananas divided by 5 is 1 banana.

Display $350 \div 5$.

T: Now, let's look at 350 divided by 5. Rewrite this expression in unit form. Talk to your partner about how representing this expression is different from the last one.

S: This time we have two units, hundreds and tens. → I can rename 3 hundreds and 5 tens as 35 tens. 35 tens divided by 5. → We didn't have to decompose 5 hundreds, but now we do have to change 3 hundreds for tens since we can't divide 3 hundreds by 5.

T: Let's use 35 tens. Say the number sentence you will use to solve in unit form.

S: 35 tens $\div$ 5 = 7 tens.

T: What is the quotient of 350 divided by 5?

S: 70.

T: Let's model this on the place value chart just to be sure you really understand. Draw 3 hundreds and 5 tens and change the hundreds into smaller units.

S: It's true. When I decomposed each hundred, I got 10 more tens. 5 tens + 10 tens + 10 tens + 10 tens is 35 tens. → Each 10 tens is 1 hundred.
Display 3,000 ÷ 5.

T: Discuss with your partner a way to solve this problem.

T: (Allow one minute for students to discuss.) Solve.
     Compare your solution with a pair near you. Discuss
     the strategy you used.

T: (Allow time for sharing.) Is there a pair that would like
     to share their solution?

S: We had to decompose 3,000 into 30 hundreds because
     there weren't enough thousands to divide. → 30
     hundreds divided by 5 is easy because we know 30
     divided by 5 is 6. Then, we just had to divide
     30 hundreds by 5 and got a quotient of 6 hundreds, or
     600.

T   How is this problem related to 350 ÷ 5?

S: 3 hundreds got changed for 30 tens, and 3 thousands
     got changed for 30 hundreds. → In both problems, we
     had to change 3 larger units for 30 of the next smaller
     units. → It's like when we are subtracting and we
     don't have enough units—we have to change a larger
     unit for smaller units, too.

T: Good connections. Turn and restate the ideas of your
     peers to your partner in your own words.

T: (Allow time for talk.) Let me fire some quick problems at
     you. Tell me the first expression you would solve.
     For example, if I say 250 ÷ 2, you say 2 hundreds divided by
     2. If I say 250 ÷ 5, you say 25 tens divided by 5. Ready?

Give students a sequence of problems such as the following:
120 ÷ 2; 400 ÷ 2; 6,200 ÷ 2; 1,800 ÷ 2; 210 ÷ 3; 360 ÷ 3; 1,200 ÷ 3;
and 4,200 ÷ 3.

> **NOTES ON MULTIPLE MEANS OF ACTION AND EXPRESSION:**
>
> Support English language learners and others as they transcribe number form to unit form. If helpful, guide students to whisper-say the number before writing. Depending on students' proficiency, provide the spelling of *hundreds* and *thousands.*
>
> Help students understand how to determine the appropriate unit form. Say, "If the divisor is greater than the first digit, try a smaller unit form." Give multiple examples.

Problem 3

Display: The Hometown Hotel has a total of
480 guest rooms. That is 6 times as many rooms as
the Travelers Hotel down the street. How many
rooms are there in the Travelers Hotel?

T: Let's read this problem together. Draw a
     tape diagram to model this problem. When
     you have drawn and labeled your diagram,
     compare it with your partner's.

T: How can we determine the value of 1 unit?
     (Point to the unit representing the number
     of rooms at the Travelers Hotel.)
$480 \div 6 = 48 \text{ tens} \div 6$
$= 8 \text{ tens}$
$= 80$

There are 80 rooms in the Travelers Hotel.

EUREKA MATH™

S: We need to divide 480 by 6.

T: Yes, 480 divided by 6 units will give us the value of 1 unit. What strategy can you use to solve?

S: We can rename 4 hundreds 8 tens as 48 tens.

T: Okay, how does that help?

S: 48 divided by 6 is 8, so 48 tens divided by 6 is 8 tens.

T: One unit is equal to …?

S: One unit equals 80.

T: So, how many rooms are there in the Travelers Hotel?

S: There are 80 rooms.

Problem Set (10 minutes)

Students should do their personal best to complete the Problem Set within the allotted 10 minutes. For some classes, it may be appropriate to modify the assignment by specifying which problems they work on first. Some problems do not specify a method for solving. Students should solve these problems using the RDW approach used for Application Problems.

> **NOTES ON MULTIPLE MEANS OF ENGAGEMENT:**
>
> Instead of moving forward into the last word problem of the Problem Set, offer students working below grade level more opportunities to determine whether or not decomposition is necessary. Have students model, on a place value chart, the suggested sequence found at the end of Problem 2. Have them do the division using the models. Finally, have them state the full number sentence using the correct unit language.

Student Debrief (13 minutes)

Lesson Objective: Divide multiples of 10, 100, and 1,000 by single-digit numbers.

The Student Debrief is intended to invite reflection and active processing of the total lesson experience.

Invite students to review their solutions for the Problem Set. They should check work by comparing answers with a partner before going over answers as a class. Look for misconceptions or misunderstandings that can be addressed in the Debrief. Guide students in a conversation to debrief the Problem Set and process the lesson.

Any combination of the questions below may be used to lead the discussion.

- How is writing the number sentence in unit form helpful for solving problems like Problem 1?
- How did you rename the numbers in Problems 2(b) and 2(c) to divide?
- How are Problems 3(a) and 3(e) alike? How are they different?

- Explain to your partner how to solve Problem 3(g). How can you start dividing in the hundreds when there aren't enough hundreds to divide?
- How are the tape diagrams different for Problem 4 and Problem 5? How could multiplication be used to solve these problems?
- How did the Application Problem connect to today's lesson?

Exit Ticket (3 minutes)

After the Student Debrief, instruct students to complete the Exit Ticket. A review of their work will help with assessing students' understanding of the concepts that were presented in today's lesson and planning more effectively for future lessons. The questions may be read aloud to the students.

Lesson 27

Objective: Represent and solve division problems with up to a three-digit dividend numerically and with place value disks requiring decomposing a remainder in the hundreds place.

Suggested Lesson Structure

- ■ Fluency Practice   (12 minutes)
- ■ Application Problem   (5 minutes)
- ■ Concept Development   (33 minutes)
- ■ Student Debrief   (10 minutes)

    Total Time   **(60 minutes)**
Fluency Practice (12 minutes)

- Sprint: Circle the Prime Number   (8 minutes)
- Divide with Place Value Disks   (4 minutes)

Sprint: Circle the Prime Number (8 minutes)

Materials: (S) Circle the Prime Number Sprint

Note: This Sprint reviews content from Topic F.

Divide with Place Value Disks (4 minutes)

Materials: (S) Personal white board

Note: This fluency activity reviews Lesson 26's Concept Development and strengthens students' understanding of place value's role in the long division algorithm.

    T: (Display 6 ÷ 2.) On your personal white board, draw place value disks to represent the expression.

    S: (Draw 6 ones disks and divide them into 2 groups of 3.)

    T: Say the division sentence in unit form.

    S: 6 ones ÷ 2 = 3 ones.
Repeat the process using the following possible sequence: 60 ÷ 2; 600 ÷ 2; 6,000 ÷ 2; 80 ÷ 2; 1,200 ÷ 3, and 1,200 ÷ 4.

     Lesson 27: Represent and solve division problems with up to a three-digit dividend numerically and with place value disks requiring decomposing a remainder in the hundreds place.

373

Application Problem (5 minutes)

Emma takes 57 stickers from her collection and divides them up equally between 4 of her friends. How many stickers will each friend receive? Emma puts the remaining stickers back in her collection. How many stickers will Emma return to her collection?
Note: This Application Problem reviews work with two-digit dividends from Lesson 17.

Concept Development (33 minutes)

Materials: (T) Thousands place value chart for dividing (Lesson 26 Template) (S) Personal white board, thousands place value chart for dividing (Lesson 26 Template)

Problem 1: Divide a three-digit number by a one-digit number using place value disks, regrouping in the hundreds.

Display 423 ÷ 3.

T: Let's find the quotient. Represent 423 on the place value chart. Tell your partner how many groups below will be needed.

S: (Draw disks on chart.) Three groups.

T: Four hundreds divided by 3. Distribute your disks and cross off what you've used. What is the quotient?

S: 1 hundred with a remainder of 1 hundred.

T: Tell me how to decompose the remaining 1 hundred.

S: Change 1 hundred for 10 tens.

T: Let's decompose 1 hundred. Turn to your partner and decide together what to do next.

S: 10 tens and 2 tens makes 12 tens. Now, we have 12 tens to divide by 3.

T: Why didn't we stop when we had a remainder of 1 hundred?

S: Because 1 hundred is just 10 tens, so you can keep dividing.

Lesson 27:   Represent and solve division problems with up to a three-digit dividend numerically and with place value disks requiring decomposing a remainder in the hundreds place.

©2018 Great Minds®. eureka-math.org

EUREKA MATH
T: 12 tens divided by 3. What is the quotient? Distribute your disks and cross off what you've used.

S: 4 tens. → 4 tens distributed to each group with no remainder.

T: Does that mean we are finished?

S: No, we still have to divide the ones.

T: Do that now. Distribute and cross off your disks. 3 ones divided by 3. What is the quotient?

S: 1 one.

T: Is there any more dividing we need to do?

S: No. We have distributed all of the units from the whole.

T: Great! So, what is the quotient of 423 divided by 3? Say the whole number sentence.

S: 423 divided by 3 equals 141.

> **NOTES ON MULTIPLE MEANS OF ACTION AND EXPRESSION:**
>
> Provide learners with learning and cognitive disabilities internal scaffolds to aid their memory and organization as they draw and distribute many place value disks. Guide students to refer back to the original expression frequently (e.g., 423 ÷ 3), whisper-count as they distribute, write down any numbers they may forget, and use self-talk, such as, "Now I'll distribute 12 tens."

Problem 2

Display 783 ÷ 3.

T: Let's solve 783 ÷ 3 using a place value chart and long division side by side. Represent 783 in a place value chart and prepare for long division. (Allow time for students to draw disks and write the problem.) Starting with the largest unit, tell me what to divide.

S: We divide 7 hundreds by 3.

T: Do that on your chart. 7 hundreds divided by 3. What is the quotient?

S: 2 hundreds, with 1 hundred remaining.

T: (Record 2 hundreds. Point to the place value chart.) In your place value chart, you recorded 2 hundreds three times. Say a multiplication sentence that tells that.

S: 2 hundreds times 3 equals 6 hundreds.
As students say the multiplication equation, refer to the algorithm, point to the 2 hundreds and the divisor, and finally, record 6 hundreds.

T: (Point to the place value chart.) We started with 7 hundreds, distributed 6 hundreds, and have 1 hundred remaining. Tell me a subtraction sentence for that.

S: 7 hundreds minus 6 hundreds equals 1 hundred.

As students say the subtraction sentence, refer to the algorithm, point to the hundreds column, record a subtraction line and symbol, and record 1 hundred.

T: (Point to the place value chart.) How many tens remain to be divided?

S: 8 tens.

T: (Record an 8 next to the 1 hundred remainder.) We decompose the remaining 1 hundred for 10 tens and add on the 8 tens. Decompose the 1 hundred. Say a division sentence for how we should distribute 18 tens.

S: 18 tens divided by 3 equals 6 tens.

As students say the division sentence, refer to the algorithm, point to the 18 tens and the divisor, and then record 6 tens in the quotient. Likewise, distribute the 18 tens in the place value chart.

T: (Point to the place value chart.) You recorded 6 tens, three times. Say a multiplication sentence that tells that.

S: 6 tens times 3 equals 18 tens.

As students say the multiplication equation, refer to the algorithm, point to 6 tens, then the divisor, and finally, record 18 tens.

T: (Point to the place value chart.) We renamed 10 tens, distributed all 18 tens, and have no tens remaining. Say a subtraction sentence for that.

S: 18 tens minus 18 tens equals 0 tens.

As students say the subtraction equation, refer to the algorithm, record a subtraction line and symbol, and 0 tens.

T: What is left to distribute?

S: The ones.

T: (Point to the place value chart.) How many ones remain to be divided?

S: 3 ones.

T: (Record a 3 next to the 0 in the tens column.) Say a division sentence for how we should distribute 3 ones.

S: 3 ones divided by 3 equals 1 one.

Lesson 27:   Represent and solve division problems with up to a three-digit dividend numerically and with place value disks requiring decomposing a remainder in the hundreds place.

©2018 Great Minds®. eureka-math.org

EUREKA MATH™
As students say the division sentence, refer to the algorithm, point to the 3 ones and the divisor, and then record 1 one in the quotient.

> T: (Point to the place value chart.) You recorded 1 one, three times. Say a multiplication sentence that describes that.
>
> S: 1 one times 3 equals 3 ones.

As students say the multiplication equation, refer to the algorithm, point to 1 one, then the divisor, and finally, record 3 ones.
> T: (Point to the place value chart.) We have 3 ones, and we distributed 3 ones. Say a subtraction sentence for that.
>
> S: 3 ones minus 3 ones equals 0 ones.

Have students share with a partner how the model matches the algorithm. Note that both show equal groups, as well as how both can be used to check their work using multiplication.

Problem 3

Display 546 ÷ 3.

> T: Work together with a partner to solve 546 ÷ 3 using place value disks and long division. One partner solves the problem using a place value chart and disks, while the other partner uses long division. Work at the same pace, matching the action of the disks with the written method, and, of course, compare your quotients.

Circulate as students are working to offer assistance as needed.

> T: How was this problem unlike the others we solved today?
>
> S: There were more hundreds left after we distributed them. → We had to decompose 2 hundreds this time.

Problem Set (10 minutes)

Students should do their personal best to complete the Problem Set within the allotted 10 minutes. For some classes, it may be appropriate to modify the assignment by specifying which problems they work on first. Some problems do not specify a method for solving. Students should solve these problems using the RDW approach used for Application Problems.

Notes box on right
NOTES ON MULTIPLE MEANS OF ENGAGEMENT:

Challenge students working above grade level and others to approximate estimates before they solve in order to check the reasonableness of their answers.

Student Debrief (10 minutes)

Lesson Objective: Represent and solve division problems with up to a three-digit dividend numerically and with place value disks requiring decomposing a remainder in the hundreds place.

The Student Debrief is intended to invite reflection and active processing of the total lesson experience.

Invite students to review their solutions for the Problem Set. They should check work by comparing answers with a partner before going over answers as a class. Look for misconceptions or misunderstandings that can be addressed in the Debrief. Guide students in a conversation to debrief the Problem Set and process the lesson.

Any combination of the questions below may be used to lead the discussion.

- Think about ways to connect the division Problems in 1(a) and 1(b) to word problems. What are some other ways to say *divided by two*? Try making a connection to fractions by using words like *half*.

- Problems 1(c) and 1(d) have the same divisor. Problem 1(d) has a larger whole. What conclusions can you make about quotients when the wholes are different, but the divisors are the same?

- The size of a remainder is closely connected with that of the divisor.
    - What conclusions can you make about remainders, whether they are in the hundreds, tens, or ones columns? Use Problems 2(a) and 2(b) to discuss your findings.
    - Imagine your partner found a remainder of 4 hundreds in Problem 2(b). How could you explain to him his mistake? Is there a connection with the remainder and the divisor that would help him to avoid this miscalculation in the future?

Lesson 27: Represent and solve division problems with up to a three-digit dividend numerically and with place value disks requiring decomposing a remainder in the hundreds place.

©2018 Great Minds®. eureka-math.org

EUREKA MATH™

- In Problem 2(c), you had to decompose 2 hundreds into 20 tens. What did you find challenging about representing that using place value disks? Did it take a while to draw that many disks? Is there a model that would simplify that process? When is it more efficient to just imagine the disks and do the long division?

- What changed when we moved from dividing two-digit wholes to three-digit wholes? Would the same process we're using for three-digit wholes work for four-digit wholes? Five digits? Six digits? A million digits?

- How did the Application Problem connect to today's lesson?

Exit Ticket (3 minutes)

After the Student Debrief, instruct students to complete the Exit Ticket. A review of their work will help with assessing students' understanding of the concepts that were presented in today's lesson and planning more effectively for future lessons. The questions may be read aloud to the students.

Lesson 27:   Represent and solve division problems with up to a three-digit dividend numerically and with place value disks requiring decomposing a remainder in the hundreds place.

Multiply by Units (4 minutes)

Materials: (S) Personal white board

Note: This fluency activity reviews Lesson 4.

T: (Project area model of 3 tens × 1. Beneath it, write 3 tens × 1.) Say the number sentence in unit form.

S: 3 tens × 1 = 3 tens.

T: (Write 3 tens × 1 = 3 tens.) Write the number sentence in standard form.

S: (Write 30 × 1 = 30.)

3 tens × 1 = 3 tens   3 tens × 1 ten = 3 hundreds   3 tens × 2 tens = 6 hundreds
30 × 1 = 30   30 × 10 = 300   30 × 20 = 600

T: (Beneath 3 tens × 1 = 3 tens, write 30 × 1 = 30. Project area model of 3 tens × 1 ten. Beneath it, write 3 tens × 1 ten.) Say the number sentence in unit form.

S: (Write 3 tens × 1 ten.) 3 tens × 1 ten = 3 hundreds.

T: (Write 3 tens × 1 ten = 3 hundreds.) Write the number sentence in standard form.

S: (Write 30 × 10 = 300.)

 EUREKA MATH™   Lesson 28:   Represent and solve three-digit dividend division with divisors of 2, 3, 4, and 5 numerically.   **389**

©2018 Great Minds®. eureka-math.org
T: (Beneath 3 tens × 1 ten = 3 hundreds, write 30 × 10 = 300. Project area model of 3 tens × 2 tens. Beneath it, write 3 tens × 2 tens.) Say the number sentence in unit form.

S: 3 tens × 2 tens = 6 hundreds.

T: (Write 3 tens × 2 tens = 6 hundreds.) Write the number sentence in standard form.

S: (Write 30 × 20 = 600.)

T: Beneath 3 tens × 2 tens = 6 hundreds, write 30 × 20 = 600.

Continue with the following possible sequence: 3 tens × 3 tens, 3 tens × 5 tens, 2 tens × 1, 2 tens × 1 ten, 2 tens × 2 tens, 2 tens × 4 tens, and 3 tens × 4 tens.

Divide Different Units (4 minutes)

Materials: (S) Personal white board

Note: This fluency activity reviews Lesson 26's Concept Development.

$$8 ÷ 2 = 4 \qquad 80 ÷ 2 = 40 \qquad 800 ÷ 2 = 400 \qquad 8{,}000 ÷ 2 = 4{,}000$$

T: (Write 8 ÷ 2 = ___.) Say the division sentence in unit form.

S: 8 ones ÷ 2 = 4 ones.

T: (Write 8 ÷ 2 = 4. To the right, write 80 ÷ 2 = ___.) Say the division sentence in unit form.

S: 8 tens ÷ 2 = 4 tens.

T: (Write 80 ÷ 2 = 40. To the right, write 800 ÷ 2 = ___.) Say the division sentence in unit form.

S: 8 hundreds ÷ 2 = 4 hundreds.

T (Write 800 ÷ 2 = 400. To the right, write 8,000 ÷ 2 = ___.) Say the division sentence in unit form.

S: 8 thousands ÷ 2 = 4 thousands.

T: (Write 8,000 ÷ 2 = 4,000.)

T: (Write 6 tens ÷ 2 = ___.) On your personal white board, write the division sentence in standard form.

S: (Write 60 ÷ 2 = 30.)

Continue with the following possible sequence: 15 tens ÷ 5, 12 hundreds ÷ 3, 28 hundreds ÷ 4, 21 tens ÷ 3, 36 tens ÷ 4, 20 tens ÷ 5, and 30 hundreds ÷ 5.

Group Counting (3 minutes)

Note: This fluency activity prepares students to divide with remainders during Lesson 30's Concept Development.

Direct students to count forward and backward, occasionally changing the direction of the count.

- Sixes to 60
- Sevens to 70
- Eights to 80
- Nines to 90

Represent and solve three-digit dividend division with divisors of 2, 3, 4, and 5 numerically.

EUREKA MATH™

Divide Three-Digit Numbers by 2 (4 minutes)

Materials: (S) Personal white board, thousands place value chart for dividing (Lesson 26 Template)

Note: This fluency activity reviews Lesson 27's Concept Development.

    T: (Write 546 ÷ 2.) Show 546 ÷ 2 by drawing place value disks in two different groups.
    S: (Draw place value disks.)
    T: Solve the same problem using the algorithm.
    S: (Solve.)

Repeat the process using the following possible sequence: 368 ÷ 2 and 846 ÷ 2.

Application Problem (6 minutes)

Use 846 ÷ 2 to write a word problem. Then, draw an accompanying tape diagram and solve.
Note: This Application Problem connects to Lesson 27's halving discussion in the Student Debrief. It also reinforces the use of inverse operations to check calculations. It uses the division problem from the fluency activity Divide Three-Digit Numbers. Encourage students to revise their word problems to use the word *half*.

Concept Development (30 minutes)

Materials: (T) Thousands place value chart for dividing (Lesson 26 Template) (S) Personal white board, thousands place value chart for dividing (Lesson 26 Template)

Problem 1: 297 ÷ 4

    T: (Write 297 ÷ 4.) Set up 297 ÷ 4 in your thousands place value chart, and write the problem to solve using long division.
    T: Divide 2 hundreds by 4.
    S: There aren't enough hundreds to put them into 4 groups. I need to break them apart.

EUREKA MATH™

Lesson 28:   Represent and solve three-digit dividend division with divisors
             of 2, 3, 4, and 5 numerically.

©2018 Great Minds®. eureka-math.org

T: Correct. 2 hundreds is the same as how many tens?

S: 20 tens.

T: 20 tens plus 9 tens is 29 tens. Divide 29 tens by 4. What is the quotient?

S: 7 tens.

T: Where do we record 7 tens?

S: Above the 9.

T: Why?

S: Because the 9 is in the tens place. It represents the number of tens.

T: Record 7 tens. When we distribute 29 tens into 4 groups, there are 7 tens in each group. Say the multiplication sentence that tells how many of the tens were distributed.

S: 7 tens times 4 equals 28 tens.

As students are reciting the multiplication sentence, point to the 7 tens, then to the divisor, and then record the 28. Be sure students are also recording.

T: We began with 29 tens, but we distributed 28 of them. How many tens are remaining? Say the subtraction sentence that will show that.

S: 29 tens minus 28 tens equals 1 ten.

T: Continue dividing with your partner.

Allow time for students to divide.

T: What is the quotient and the remainder?

S: The quotient is 74 and the remainder is 1.

T: How can we use multiplication and addition to check if our quotient is correct?

S: We can multiply 74 by 4, and then add the remainder 1. If we get 297, then we are correct.

T: Check your quotient using multiplication.

T: What was the new complexity for this division problem?

S: We didn't have enough hundreds to divide, so we decomposed them as tens and divided by tens first.

392   Lesson 28:   Represent and solve three-digit dividend division with divisors of 2, 3, 4, and 5 numerically.

EUREKA MATH™

Problem 2

How many weeks are there in one year?

> T: What do we need to know in order to solve this problem?
>
> S: The number of days in one year.
>
> T: How many days are in one year?
>
> S: 365. → Sometimes 366.
>
> T: Good! Let's use 365 days. What other information is necessary?
>
> S: There are 7 days in a week.
>
> T: Okay, use a tape diagram to represent this problem. Show your partner how you set up your tape diagram. Solve and then check your work.

Allow students time to work independently. Circulate and offer assistance as necessary.

> T: Did you find that 365 could be divided by 7 evenly?
>
> S: No, there was a remainder of 1.
>
> T: In this problem, what does the remainder mean?
>
> S: It means that there is one extra day.
>
> T: Talk to your partner. How did you know it was an extra day?
>
> S: Our whole, or total, represented the number of days in a year, 365, so our remainder is days. → 365 minus 52 groups of 7 leaves 1 day remaining. → 1 one is one day. 365 ones, or days, is one year.
>
> T: So, what would be a good sentence to write?
>
> S: We can say, "There are 52 weeks and 1 day in one year."

Problem Set (10 minutes)

Students should do their personal best to complete the Problem Set within the allotted 10 minutes. For some classes, it may be appropriate to modify the assignment by specifying which problems they work on first. Some problems do not specify a method for solving. Students should solve these problems using the RDW approach used for Application Problems.

Lesson 28:   Represent and solve three-digit dividend division with divisors   393
              of 2, 3, 4, and 5 numerically.

©2018 Great Minds®. eureka-math.org

Student Debrief (9 minutes)

Lesson Objective: Represent and solve three-digit dividend division with divisors of 2, 3, 4, and 5 numerically.

The Student Debrief is intended to invite reflection and active processing of the total lesson experience.

Invite students to review their solutions for the Problem Set. They should check work by comparing answers with a partner before going over answers as a class. Look for misconceptions or misunderstandings that can be addressed in the Debrief. Guide students in a conversation to debrief the Problem Set and process the lesson.

Any combination of the questions below may be used to lead the discussion.

- Look at all of the problems with 4 as a divisor. They all have a remainder of 1, 2, or 3. If you were dividing by 4 and came up with a remainder of 4, 5, or 6, what would you know?

- Problems 1(a) and 1(b) have the same quotient. How can the same quotient come from two different whole amounts? Let's draw a tape diagram for each to show how that could be true.

- Problems 1(c) and 1(d) have the same whole. Which quotient is larger? Why?

- How did the Application Problem connect to today's lesson?

Exit Ticket (3 minutes)

After the Student Debrief, instruct students to complete the Exit Ticket. A review of their work will help with assessing students' understanding of the concepts that were presented in today's lesson and planning more effectively for future lessons. The questions may be read aloud to the students.

■ Fluency Practice   (12 minutes)
■ Application Problem   (5 minutes)
■ Concept Development   (33 minutes)
■ Student Debrief   (10 minutes)

   Total Time   **(60 minutes)**
Fluency Practice (12 minutes)

▪ Multiply by Units   (4 minutes)
▪ Divide Different Units   (4 minutes)
▪ Divide to Find Half   (4 minutes)

Multiply by Units (4 minutes)

Materials: (S) Personal white board

Note: This fluency activity reviews Lesson 4.

   T: (Write 2 × 4 = ___.) Say the multiplication sentence in unit form.
   S: 2 ones × 4 = 8 ones.
   T: Write the equation in standard form.
   S: (Write 2 × 4 = 8.)
   T: (Write 20 × 4 = ___.) Say the multiplication sentence in unit form.
   S: 2 tens × 4 = 8 tens.
   T: Write the equation in standard form.
   S: (Write 20 × 4 = 80.)
   T: (Write 2 tens × 4 tens = ___.) Say the multiplication sentence in unit form.
   S: 2 tens × 4 tens = 8 hundreds.
   T: Write the equation in standard form.
   S: (Write 20 × 40 = 800.)

Continue with the following possible sequence: 3 × 3, 30 × 3, 30 × 30, 30 × 40, 5 × 3, 50 × 3, 50 × 30, 50 × 50, 5 × 8, 50 × 8, and 50 × 80.

Lesson 29:   Represent numerically four-digit dividend division with divisors
            of 2, 3, 4, and 5, decomposing a remainder up to three times.

EUREKA
MATH™

Divide Different Units (4 minutes)

Materials: (S) Personal white board

Note: This fluency activity reviews Lesson 26's Concept Development and strengthens students' understanding of place value's role in the long division algorithm.

Repeat the process from Lesson 28 using the following possible sequence: 9 ones ÷ 3, 9 tens ÷ 3, 9 hundreds ÷ 3, 9 thousands ÷ 3, 16 tens ÷ 4, 15 hundreds ÷ 5, 27 hundreds ÷ 3, 24 tens ÷ 3, 32 tens ÷ 4, 40 tens ÷ 5, and 20 hundreds ÷ 5.

Divide to Find Half (4 minutes)

Materials: (S) Personal white board

Note: This fluency activity reviews Lesson 28's Concept Development.

T: Find half of 38 using long division.

S: 19.

T: Find half of 386.

S: 193.

Continue with the following possible sequence: half of 56, 562, 74, and 744.

Application Problem (5 minutes)

Janet uses 4 feet of ribbon to decorate each pillow. The ribbon comes in 225-foot rolls. How many pillows will she be able to decorate with one roll of ribbon? Will there be any ribbon left over?

Note: This Application Problem reviews the skill of decomposing units in order to divide and interpreting a remainder within the context of a word problem so that those skills may be applied to today's work with four-digit dividends.

> **NOTES ON**
> **MULTIPLE MEANS**
> **OF REPRESENTATION:**
>
> Simplify and clarify the Application Problem for English language learners and others. Use images or illustrations to explain a roll of ribbon. Challenge students working above grade level to make predictions or estimates before solving and to determine and discuss which model and method is most efficient (for them) to solve 225 divided by 4.

©2018 Great Minds®. eureka-math.org

Concept Development (33 minutes)

Materials: (S) Personal white board

Problem 1: Divide using the standard algorithm and multiply to check the answer.

> T: (Write 4,325 ÷ 3.) Write 4,325 ÷ 3 on your personal white board.
>
> T: Divide 4 thousands by 3. What is the quotient?
>
> S: 1 thousand.
>
> T: Record 1 thousand. Say the multiplication sentence that tells how many of the thousands we distributed.
>
> S: 1 thousand times three equals 3 thousands.

As students are reciting the multiplication sentence, point to the thousand, then to the divisor, and then record the 3 in the thousands column. Be sure students are also recording.

> T: We began with 4 thousands and distributed 3 of them. How many thousands remain? What is the subtraction sentence that will show that?
>
> S: 4 thousands minus 3 thousands equals 1 thousand.

As students are reciting the subtraction sentence, point to the 4 thousands and the 3 thousands, and then record the remaining 1.

> T: What do you notice about what we subtracted?
>
> S: We have 1 thousand left that we can decompose into 10 hundreds.
>
> T: How many hundreds did we already have?
>
> S: 3 hundreds. Now, our division sentence for the hundreds is 13 hundreds divided by 3. 13 hundreds divided by 3 is 4 hundreds.
>
> T: Record 4 hundreds. Continue dividing with your partner.

Allow time for students to complete the long division.

> T: Say the complete division sentence.
>
> S: 4,325 divided by 3 is 1,441 with a remainder of 2.
>
> T: Great! How can we use multiplication and addition to check if our quotient and remainder are correct?
>
> S: We can multiply 1,441 by 3 and then add the remainder of 2.

Repeat with 2,254 ÷ 3. Use the standard algorithm and multiply to check the answer. (Students see 22 hundreds ÷ 3 is the first step instead of 2 thousands ÷ 3.)

> **NOTES ON MULTIPLE MEANS OF ENGAGEMENT:**
>
> In order to sustain the interest of some learners, it may be meaningful to couple the long division with premade modeling with place value disks or real objects that can be referred to throughout the vignette. Give students graph paper to ease the recording of numbers in their place value columns.

Lesson 29:   Represent numerically four-digit dividend division with divisors of 2, 3, 4, and 5, decomposing a remainder up to three times.

©2018 Great Minds®. eureka-math.org

EUREKA MATH™

Problem 2

Ellie bought two packs of beads. Altogether, she has 1,254 beads. If the number of beads in each bag is the same, how many beads are in three packs?

> T: Draw something to help you solve this problem. (Pause.) What did you draw?

> S: (Method A) I drew a tape diagram. I made 2 units and labeled the whole as 1,254, since we know that there are 1,254 beads in two packs. Then, I just drew a third unit. I labeled all 3 units with a question mark to represent how many beads are in three packs.

> S: (Method B) Not me. After I drew two equal parts, I drew a second tape diagram below with three equal parts.

> T: What conclusions did you make from your drawing?

> S: We need to divide 1,254 by 2 to find out how many beads are in each bag. This helps because if we know how many beads are in one bag, we can multiply by 3 to find out how many beads are in three bags.

> T: 1,254 divided by 2 is …?

> S: 1,254 divided by 2 is 627.

> T: Are we done?

> S: No! We needed to multiply 627 by 3 to find the total number of beads in three packs.

> S: 627 times 3 equals 1,881. There are 1,881 beads in three packs.

Note: Clearly this is scripted to reflect a classroom where students have confidence with the tape diagram. If students need a more guided approach, it should be provided.

Problem Set (20 minutes)

Students should do their personal best to complete the Problem Set within the allotted 20 minutes.
For some classes, it may be appropriate to modify the assignment by specifying which problems they work on first. Some problems do not specify a method for solving. Students should solve these problems using the RDW approach used for Application Problems.

EUREKA MATH™   **Lesson 29:**   Represent numerically four-digit dividend division with divisors   **407**
of 2, 3, 4, and 5, decomposing a remainder up to three times.

Student Debrief (10 minutes)

Lesson Objective: Represent numerically four-digit dividend division with divisors of 2, 3, 4, and 5, decomposing a remainder up to three times.

The Student Debrief is intended to invite reflection and active processing of the total lesson experience.

Invite students to review their solutions for the Problem Set. They should check work by comparing answers with a partner before going over answers as a class. Look for misconceptions or misunderstandings that can be addressed in the Debrief. Guide students in a conversation to debrief the Problem Set and process the lesson.

Any combination of the questions below may be used to lead the discussion.

- All of the problems in the Problem Set divided a four-digit number by a one-digit number. Why do some of the quotients contain three digits while others have four?

- What did you notice about the size of the quotient in Problems 1(e) and 1(f) when the divisor increased from 2 to 3?

- Problems 1(i) and 1(j) resulted in the same quotient. Explain why that is possible.

- When is it possible for you to know, before dividing, whether or not a division problem will have a remainder?

- We have divided two-, three-, and now four-digit numbers. Explain to your partner how each time the whole became larger, another step was added. Discuss what you think would be true for dividing a number with a greater number of digits.

Exit Ticket (3 minutes)

After the Student Debrief, instruct students to complete the Exit Ticket. A review of their work will help with assessing students' understanding of the concepts that were presented in today's lesson and planning more effectively for future lessons. The questions may be read aloud to the students.

Multiply Using the Standard Algorithm (4 minutes)

Materials: (S) Personal white board

Note: This fluency activity reviews the Concept Development from Lessons 10 and 11, in anticipation of Topic H.

>   T: (Write 773 × 2 = ___.) On your personal white board, find the product using the standard algorithm.
>   S: (Solve.)

Repeat the process for the following possible sequence: 147 × 3, 1,605 × 3, and 5,741 × 5.

Divide Different Units (4 minutes)

Materials: (S) Personal white board

Note: This fluency activity reviews Lesson 26's Concept Development and strengthens students' understanding of place value's role in the long division algorithm.

Repeat the process from Lesson 28 using the following possible sequence: 15 ones ÷ 3, 15 tens ÷ 3, 25 hundreds ÷ 5, 21 hundreds ÷ 3, 28 tens ÷ 4, 30 tens ÷ 5, and 40 hundreds ÷ 5.

EUREKA MATH™

Find the Quotient and Remainder (4 minutes)

Materials: (S) Personal white board

Note: This fluency activity reviews Lesson 29's Concept Development.

    T: (Write 4,768 ÷ 2.) On your personal white board, find the quotient and remainder.
    S: (Solve.)

Continue with the following possible sequence: 6,851 ÷ 5, 1,264 ÷ 4, and 1,375 ÷ 4.

Application Problem (5 minutes)

The store wanted to put 1,455 bottles of juice into packs of 4. How many complete packs can they make?
How many more bottles do they need to make another pack?

Note: This problem is a review of Lesson 29, which bridges dividing with remainders to the current lesson.
Concept Development (33 minutes)

Materials: (S) Personal white board

Problem 1: Divide with a zero in the dividend.

804 ÷ 4

    T: What is our first step to divide 804 by 4?
    S: Divide the hundreds place. → Divide the largest units
          by 4.
    T: 8 hundreds divided by 4 is…?
    S: 2 hundreds.
    T: Say a multiplication sentence that tells how many
          hundreds have been distributed, starting with
          2 hundreds.
    S: 2 hundreds times 4 equals 8 hundreds.

> **NOTES ON
> MULTIPLE MEANS
> OF REPRESENTATION:**
>
> Build understanding of long division by
> showing 804 divided by 4 with place
> value disks, base ten blocks, or real
> objects such as money. If beneficial,
> try the following:
>
> - Use color to record the partial
>   dividends (e.g., 8 hundreds).
>
> - Draw arrows to the numbers that
>   are brought down when remainders
>   are regrouped with smaller units
>   from the whole.
>
> - Encourage students to ask questions
>   for clarity as they work.

T: Tell your partner how to find how many hundreds remain.

S: 8 hundreds minus 8 hundreds is 0 hundreds. Zero hundreds remain.

T: Zero hundreds remain. If zero hundreds remain, we can't decompose hundreds into tens to keep dividing. Are we finished?

S: If there are no more hundreds to regroup as tens, I guess we are finished. → Even if we had hundreds to regroup, there aren't any tens to regroup with. → There are still 4 ones. We have to divide those.

T: Can we move straight to dividing in the ones column? Discuss with your partner what happens if we just pass by the tens since there are zero tens.

S: We have to divide all of the units in the whole, so yeah, let's divide 4 ones by 4. → If we do that, we record 1 one in the ones column, but then we have nothing to record in the tens column because we skipped it. → Our answer could be 21. But if I multiply 21 times 4, that's 84, and the whole is 804. → We have to keep dividing in the tens, even if there are zero tens to divide, otherwise our answer will be wrong.

T: Yes, we must keep dividing unit by unit, even if there is a zero in a unit. Zero hundreds renamed as tens is zero tens. Zero tens plus zero tens is zero tens. What is zero tens divided by 4?

S: Zero tens.

T: We continue recording even if we have zero tens to regroup. Zero tens times 4 is…?

S: Zero tens.

T: Zero tens minus zero tens is zero tens. 4 ones remain. Work with your partner to find the quotient.

S: (Continue dividing until they reach the quotient of 201.)

T: Say the complete equation.

S: 804 divided by 4 equals 201.

T: Check your work using multiplication.

S: 201 times 4 equals 804.

T: Tell your partner how you know when to stop dividing.

S: When there are no more remainders, you are finished. → You must keep dividing in each place value, even if there are zero remainders or a zero in the whole. → Keep dividing until each place value has been divided. Once you divide the ones, you have a quotient and possibly a remainder. → You must keep dividing the smaller units even if you don't have any larger units to divide.

420   **Lesson 30:**   Solve division problems with a zero in the dividend or with a zero in the quotient.

©2018 Great Minds®. eureka-math.org

EUREKA MATH™

Problem 2: Divide with a zero in the quotient.

$4{,}218 \div 3$

T: Work with your partner to divide the thousands and the hundreds. As I circulate around the room, let me hear you using the language of units as you divide.

Allow students one to two minutes to divide. Have two students come to the board to show their work.

T: I see that these students have found the quotient contains 1 thousand and 4 hundreds. When they subtracted the distributed hundreds, there was no remainder. We don't need to rename zero hundreds as tens, but we do have 1 ten to divide. Discuss with your partner your next steps.

S: 1 ten cannot be divided by 3. I'm not sure what to do. → But 10 divided by 3 would give me a quotient of 3. → But that's 3 ones, not 3 tens. → If I divided 1 ten into 3 groups, I would distribute zero tens if I was using disks, so the answer is zero tens. We should record zero tens in our quotient.

T: Right! If we distribute zero tens we record zero in the quotient and still have 1 ten and 8 ones remaining. Talk with your partner about your next steps.

S: We can change 1 ten for 10 ones. Now we have 18 ones divided by 3 is 6 ones. Our quotient is 1,406.

T: Talk with your partner about the importance of the zero in your quotient.

S: If I didn't record the zero, my answer would be wrong. → The zero is a placeholder of the tens. I can't leave that place empty. Or, what if I tried recording the 6 ones in the tens place? Then, my answer would really be wrong! → I can always use multiplication or estimation to check my work in case I may have recorded wrong.

```
      1 4 0 6
   3 | 4 2 1 8
     -3
     ─────
      1 2
     -1 2

         -1 8
         ─────
            0
```

Problem Set (20 minutes)

Students should do their personal best to complete the Problem Set within the allotted 20 minutes. For some classes, it may be appropriate to modify the assignment by specifying which problems they work on first. Some problems do not specify a method for solving. Students should solve these problems using the RDW approach used for Application Problems.

> **NOTES ON MULTIPLE MEANS OF ENGAGEMENT:**
>
> Students working above grade level will enjoy the challenge of Problem 11(b) on the Problem Set. Extend the problem further by asking, "How could you change the whole so that there is a zero in the quotient in a different place (than the hundreds place)?"

Student Debrief (10 minutes)

Lesson Objective: Solve division problems with a zero in the dividend or with a zero in the quotient.

The Student Debrief is intended to invite reflection and active processing of the total lesson experience.

Invite students to review their solutions for the Problem Set. They should check work by comparing answers with a partner before going over answers as a class. Look for misconceptions or misunderstandings that can be addressed in the Debrief. Guide students in a conversation to debrief the Problem Set and process the lesson.

Any combination of the questions below may be used to lead the discussion.

- In Problem 6, did anyone get 128? How did you know that was wrong?

- In Problem 10, the whole had consecutive zeros. How does your place value knowledge help you to keep track of where you are dividing?

- How does multiplication help you check your division?

- For what reason might there be a zero in the quotient?

- We divide, starting with the largest unit, and see if there is a remainder. What do we do with the remaining unit or units? How is that different than what we do in the ones place?

- Normally, we stop dividing at the ones place, and if there's a remainder, we give the remainder with the quotient. What if we were dividing up money? If we got down to the ones place, using dollars, what could we do?

Exit Ticket (3 minutes)

After the Student Debrief, instruct students to complete the Exit Ticket. A review of their work will help with assessing students' understanding of the concepts that were presented in today's lesson and planning more effectively for future lessons. The questions may be read aloud to the students.

Objective: Interpret division word problems as either *number of groups unknown* or *group size unknown*.

Suggested Lesson Structure

■ Fluency Practice   (11 minutes)
■ Application Problem   (5 minutes)
■ Concept Development   (34 minutes)
■ Student Debrief   (10 minutes)
  Total Time   **(60 minutes)**
Fluency Practice (11 minutes)

- Sprint: Divide Different Units   (9 minutes)
- Group Size or Number of Groups Unknown   (2 minutes)

Sprint: Divide Different Units (9 minutes)

Materials: (S) Divide Different Units Sprint

Note: This Sprint reviews Lesson 26's Concept Development and strengthens students' understanding of place value's role in the long division algorithm.

Group Size or Number of Groups Unknown (2 minutes)

Note: This fluency activity prepares students for today's Concept Development.

T: (Draw or project the 8 ÷ 2 = 4 tape diagrams shown on the right.) Here are two tape diagrams representing 8 ÷ 2 = 4. (Point to the model on the left.) What does the 2 represent, the size of the group or the number of groups?

S: The size of the group!

T: (Point to the second model.) In the model to the right?

S: The number of groups.

Repeat with 12 ÷ 3 = 4.

430   Lesson 31:   Interpret division word problems as either *number of groups unknown* or *group size unknown*.

Note: This Application Problem is a review of Lesson 30, practicing with a zero in the quotient. In Problem 1 of the Concept Development, students discuss whether the unknown in this problem is the group size or the number of groups.

Concept Development (34 minutes)

Materials: (S) Personal white board

Problem 1

Dr. Casey has 1,868 milliliters of Medicine T. She pours equal amounts of the medicine into 4 containers. How many milliliters of medicine are in each container?

- T: Can you draw something to help you solve this problem? What can you draw? Go ahead and do so.
- S: (Draw.)
- T: What did you draw?
- S: I drew a tape diagram with the whole labeled as 1,868 milliliters. → I made the whole into 4 equal parts because she poured the medicine into four containers.
- T: What are we trying to find out?
- S: We need to find out how many milliliters are in each container. → We need to find the size of the group.
- T: Right, we are finding the size of the group. We already know how many groups there are, four.
- T: Let's label the unknown with *t* for Medicine T.
- T: Solve for how much medicine will be in each container. (Allow time for students to work.)
- S: There will be 467 milliliters in each container.

1,868 mL

EUREKA MATH

Lesson 31:   Interpret division word problems as either *number of groups unknown* or *group size unknown*.

431

©2018 Great Minds®. eureka-math.org
T: Compare this tape diagram to the one you drew in the Application Problem. Discuss the similarities.
     Were you solving for the number of groups or the size of the group?

S: Both tape diagrams are broken into four groups. → Both show we were solving for the size of each
     group.

Problem 2

T: (Draw or project the tape diagram shown below.) With your partner, discuss the tape diagram.
     Then, create your own word problem to match. Remember to determine if you are finding the size
     of the group or the number of groups. (We might also express this choice as the number of
     measurements or the size of the measurements.)
Guide students to see that the equal partitioned parts of the tape diagram tell how many groups there are.
Students need to write a problem that asks for the number in each group or the size of the measurement.
Suggest the context of 168 liters of cleaning solution to be poured equally into 3 containers. Have a few sets
of partners share their word problems to verify students are writing to solve for group size unknown.

Problem 3

Two hundred thirty-two people are driving to a conference. If each car holds 4 people, including the driver,
how many cars will be needed?

T: Can you draw something to help you solve this problem? Go ahead. (Pause while students draw.)
     What did you draw?

S: I drew a tape diagram with the whole labeled as 232 people.

T: Tell your partner how you partitioned the tape diagram. Are you finding the size of each group or
     the number of groups?

S: We made 4 equal parts because each car has
     4 people in it. → We know the size of the
     group. Each car has 4 people. We don't
     know how many groups or how many cars.
     → We showed that 4 are in each car, but we
     don't know the number of cars. → Each unit
     of the tape diagram shows there are 4 people
     in each car, but we didn't know how many
     cars to draw.

T: We labeled the tape diagram to show 4 people in each car and used a question mark to show we
     didn't know how many cars were needed. Solve.

S: (Solve.)

432   Lesson 31:   Interpret division word problems as either *number of groups unknown*
                                    or *group size unknown*.

                 ©2018 Great Minds®. eureka-math.org

                                                                         **EUREKA
                                                                          MATH**™

T: Tell your partner how you solved.

S: I divided 232 by 4. The quotient is 58.

Problem 4

T: (Draw or project the tape diagram shown below.)
     With your partner, discuss the parts of the tape
     diagram. Then, write your own word problem to
     match. Remember to determine if you are solving for
     the size of the group or the number of groups.
     (We might also express this choice as the number of
     measurements or the size of the measurements.)
> **NOTES ON**
> **MULTIPLE MEANS**
> **OF ACTION AND**
> **EXPRESSION:**
>
> Give extra time and opportunities for
> discussion to English language learners
> and others as they write their own
> word problem. If time is an issue, use
> the suggestion mentioned or provide
> the following frame:
>
> *There are 138 _____.*
>
> *If we put 3 _____ in each group, how
> many groups can be made?*
Guide students to see the first partitioned part of the tape diagram tells how many are in each group.
Students need to write a problem that asks for the number of groups and account for a remainder.
Suggest the context of 138 feet of rope cut into 3-foot segments, solving for the number of ropes, or groups
(measurements). Have a few sets of partners share their word problems to verify students are writing to find
the unknown number of groups. Have students compare and contrast the tape diagrams and word problems
for this problem and Problem 2 of the Concept Development.

Problem Set (10 minutes)

Students should do their personal best to complete the
Problem Set within the allotted 10 minutes. For some
classes, it may be appropriate to modify the assignment by
specifying which problems they work on first.
Some problems do not specify a method for solving.
Students should solve these problems using the RDW
approach used for Application Problems.

Student Debrief (10 minutes)

Lesson Objective: Interpret division word problems as
either *number of groups unknown* or *group size unknown.*

The Student Debrief is intended to invite reflection and
active processing of the total lesson experience.

Invite students to review their solutions for the Problem Set. They should check work by comparing answers with a partner before going over answers as a class. Look for misconceptions or misunderstandings that can be addressed in the Debrief. Guide students in a conversation to debrief the Problem Set and process the lesson.

Any combination of the questions below may be used to lead the discussion .

- How and why are the tape diagrams in Problems 1 and 2 different?

- Share your tape diagram for Problem 3. What led you to draw a tape diagram to solve for the number of groups?

- For Problem 3, if our tape diagram shows the whole divided into 3 equal groups instead, would we get the wrong quotient?

- Compare your tape diagrams for Problem 2 and Problem 4. Describe how your tape diagrams differ between one- and two-step problems. If there are two unknowns, how do you determine which one to solve first?

- If, for Problem 5, the tape diagram was drawn to show groups of 5, instead of 5 equal groups, how might that lead to challenges when solving the second part of the problem?

Exit Ticket (3 minutes)

After the Student Debrief, instruct students to complete the Exit Ticket. A review of their work will help with assessing students' understanding of the concepts that were presented in today's lesson and planning more effectively for future lessons. The questions may be read aloud to the students.

Lesson 31: Interpret division word problems as either *number of groups unknown* or *group size unknown.*

▪ Multiply Units   (4 minutes)
▪ Group Counting   (4 minutes)

Quadrilaterals (4 minutes)

Materials: (T) Shapes (Fluency Template)

Note: This fluency activity reviews Grade 3 geometry concepts in anticipation of Module 4 content. The sheet can be duplicated for students, if you prefer.

T: (Project the shapes template and the list of attributes.) Take one minute to discuss the attributes of the shapes you see. You can use the list to help.

S: Some have right angles. → All have straight sides. → They all have 4 sides. → B and G and maybe H and K have all equal sides. I'm not really sure.

T: If we wanted to verify whether the sides are equal, what would we do?

S: Measure!

T: What about the angles? How could you verify that they're right angles?

S: I could compare it to something that I know is a right angle.
Attributes
Number of Sides
Length of Sides
Size of Angle
Right Angle

Shapes
Quadrilateral
Rhombus
Square
Rectangle
Parallelogram
Trapezoid

EUREKA MATH™

T: (Post the shape names.) Now, look at the shape names. Determine, to the best of your ability, which shapes might fall into each category.

S: B and G might be squares. → All of them are quadrilaterals. → H and K might be rhombuses. It's hard to know if their sides are equal. → D and I are rectangles. Oh yeah, and B and G are, too. → L and A look like trapezoids.

T: Which are quadrilaterals?

S: All of them.

T: Which shapes appear to be rectangles?

S: B, D, G, and I.

T: Which appear to have opposite sides of equal length but are not rectangles?

S: C, H, K. → A and L have one pair of opposite sides that look the same.

T: Squares are rhombuses with right angles. Do you see any other shapes that might have four equal sides without right angles?

S: H and K.

Multiply Units (4 minutes)

Materials: (S) Personal white board

Note: This fluency activity reviews Lesson 4's content.

T: (Write 2 × 4 = ___.) Say the multiplication sentence in unit form.

S: 2 ones × 4 = 8 ones.

T: Write the answer in standard form.

S: (Write 8.)

T: (Write 20 × 4 = ___.) Say the multiplication sentence in unit form.

S: 2 tens × 4 = 8 tens.

T: Write the answer in standard form.

S: (Write 80.)

Continue with the following possible sequence: 2 hundreds × 4, 2 thousands × 4, 3 ones × 5, 3 tens × 5, 3 thousands × 5, 3 thousands × 4, 5 tens × 6, 5 ones × 4, 5 thousands × 8, and 9 tens × 6.

Group Counting (4 minutes)

Note: This fluency activity prepares students for this lesson's Concept Development.

Direct students to count forward and backward, occasionally changing the direction of the count.

- Sixes to 60
- Sevens to 70
- Eights to 80
- Nines to 90

EUREKA MATH™

Lesson 32:   Interpret and find whole number quotients and remainders to solve one-step division word problems with larger divisors of 6, 7, 8, and 9.

443

©2018 Great Minds®. eureka-math.org

Application Problem (7 minutes)

Use the tape diagram to create a division word problem that solves for the unknown, the total number of threes in 4,194. Switch word problems with a partner and solve.
They can make 1,398 sacks of flour.

Note: This problem extends understanding from Lesson 31 about solving for an unknown number of groups. Extend this problem in the Student Debrief using a divisor of 6, which connects to this lesson's Concept Development.

> **NOTES ON MULTIPLE MEANS OF ACTION AND EXPRESSION:**
>
> Allot extra time and a moment for discussion for English language learners before they write. Make available a list of measurement units (e.g., dollars) and everyday units (e.g., marbles).
>
> Students working below grade level may benefit from a review. Ask, "What is the whole amount? 4,194 what? How many are in each group according to our tape diagram? How can we group our unit? In a can? A basket? A measurement? Do we know the number of groups? How can we find out?"

Concept Development (31 minutes)

Materials: (S) Personal white board

Problem 1

We all know there are 7 days in a week. How many weeks are in 259 days?

- T: Draw what we know and what we need to know on a tape diagram.
- S: I labeled the whole as 259 days. Then, I put a 7 in one part because there are 7 days in each week. We don't know how many groups of 7 days there are.
- T: How did you represent the number of weeks that are unknown?
- S: I labeled the rest of the tape diagram with a question mark.
- T: Solve for how many weeks there are in 259 days.
- S: There are 37 weeks in 259 days.

There are 37 weeks in 259 days.

444   Lesson 32:   Interpret and find whole number quotients and remainders to solve
                                    one-step division word problems with larger divisors of 6, 7, 8, and 9.

                ©2018 Great Minds®. eureka-math.org

EUREKA MATH™

T: The divisor in this problem is larger than in many division problems we have solved. Tell your partner a strategy you can use to find the quotient when dividing by 7.

S: 25 tens divided by 7 is easy. It's 3 tens with 4 tens left over. → I counted by sevens, 10 at a time: 10 sevens is 70, 20 sevens is 140, 30 sevens is 210, and 40 sevens would be too big. So, I got 30 sevens with 49 left over. → That still means you get 3 tens in the quotient. One way is like we did with place value disks. The other is like we did with the area model. But they'll both give the same answer.

T: Either way of thinking will work for finding the quotient. When our divisor is large, how do I check to see if my quotient and remainder are correct?

S: The same way we always do! → It's no different for big divisors than for small divisors—multiply the number of groups times the size of each group. → And, don't forget to add the remainder. → Multiply the divisor by the quotient, and add the remainder.

T: So, what we learned about small divisors still helps us now!

Problem 2

Everyone is given the same number of colored pencils in art class. If there are 249 colored pencils and 8 students, how many pencils does each student receive?

T: Draw a tape diagram to represent the problem. Describe the parts of your tape diagram to your partner.

S: I recorded and labeled the total of 249 pencils. Then, I made 8 equal parts because there are 8 students. I need to solve for how many in each group, so I put a question mark in one part to show that I need to solve for how many pencils each student will get.

T: Solve for how many pencils each student will receive. (Allow students time to work.)

S: Each student will receive 31 colored pencils. There will be 1 pencil left over.

T: Does your drawing of the tape diagram account for the remaining pencil? Let's revise our tape diagram to show the remainder.

S: I can shade a small portion at the end of the tape diagram to represent the remaining pencil. I will have to resize each of the eight parts to make them equal.

T: Discuss a strategy you might have used when dividing by a larger divisor, like 8.

S: I counted by 8 tens. 8 tens, 16 tens, 24 tens. → I know there are 2 fours in each eight. There are 6 fours in 24. So, half of 6 is 3. There are 3 eights in 24. → I used my facts. I know 8 times 3 tens is 24 tens.

Each student receives 31 pencils. There is 1 pencil remaining.

EUREKA MATH™

Lesson 32:   Interpret and find whole number quotients and remainders to solve one-step division word problems with larger divisors of 6, 7, 8, and 9.

445

©2018 Great Minds®. eureka-math.org

Problem 3

Mr. Hughes has 155 meters of volleyball netting. How many nets can he make if each court requires 9 meters of netting?

T: Draw a tape diagram to represent the problem. Describe the parts of your tape diagram to your partner.

S: My tape diagram shows a total of 155. I partitioned one section for 9 meters. I don't know how many nets he can make, but I do know the length of each.

T: Solve for how many nets can be made using long division.

S: Seventeen nets can be made, but 2 meters of netting will be left over.

T: Does your drawing of the tape diagram account for the remaining netting? Let's revise our tape diagram to show the remainder.

S: I can shade a small portion at the end of the tape diagram to represent the remaining 2 meters.

T: What strategy did you use for dividing with the divisor of 9?

S: I counted by 9 tens. 9 tens, 18 tens. One hundred eighty was too big. → I used a special strategy. I made 10 nets, which meant I used 90 meters of netting. That left 65 meters. Nine times 7 is 63 so that meant 7 more nets and 2 meters left over. → I used my nines facts.
Mr. Hughes can make 17 nets.

Problem Set (15 minutes)

Students should do their personal best to complete the Problem Set within the allotted 15 minutes. For some classes, it may be appropriate to modify the assignment by specifying which problems they work on first. Some problems do not specify a method for solving. Students should solve these problems using the RDW approach used for Application Problems.

446   **Lesson 32:**   Interpret and find whole number quotients and remainders to solve
                                   one-step division word problems with larger divisors of 6, 7, 8, and 9.

EUREKA MATH™

Student Debrief (10 minutes)

Lesson Objective: Interpret and find whole number quotients and remainders to solve one-step division word problems with larger divisors of 6, 7, 8, and 9.

The Student Debrief is intended to invite reflection and active processing of the total lesson experience.

Invite students to review their solutions for the Problem Set. They should check work by comparing answers with a partner before going over answers as a class. Look for misconceptions or misunderstandings that can be addressed in the Debrief. Guide students in a conversation to debrief the Problem Set and process the lesson.

Any combination of the questions below may be used to lead the discussion.

- In Problem 2, are you solving for the quotient, the remainder, or both? Why?
- Did you have to revise your tape diagram for any of the problems? If so, which one(s), and why?
- In Problem 4, did anyone get 15 teams? Why would that be an easy mistake to make?
- How could a special strategy be used to solve Problem 1?
- How did yesterday's lesson prepare you for today's lesson?
- Revisit the Application Problem. Revise the word problems using a divisor of 6 and solve. Compare the quotients. Do you see a relationship between the quotients? Did you need to divide 4,194 by 6, or could you have gotten the new quotient directly from the previous quotient (1,398)?

Exit Ticket (3 minutes)

After the Student Debrief, instruct students to complete the Exit Ticket. A review of their work will help with assessing students' understanding of the concepts that were presented in today's lesson and planning more effectively for future lessons. The questions may be read aloud to the students.

Lesson 33

Objective: Explain the connection of the area model of division to the long division algorithm for three- and four-digit dividends.

Suggested Lesson Structure

- █ Fluency Practice   (12 minutes)
- █ Application Problem   (5 minutes)
- █ Concept Development   (33 minutes)
- █ Student Debrief   (10 minutes)
-   **Total Time**   **(60 minutes)**
Fluency Practice (12 minutes)

- ▪ Quadrilaterals   (4 minutes)
- ▪ Group Counting   (4 minutes)
- ▪ Multiply Units   (4 minutes)

Quadrilaterals (4 minutes)

Materials: (T) Shapes (Lesson 32 Fluency Template) (S) Personal white board

Note: This fluency activity reviews Grade 3 geometry concepts in anticipation of Module 4 content.

- T: (Project the shapes template which includes the following: a square; a rhombus that is not a square; a rectangle that is not a square; and several quadrilaterals that are not squares, rhombuses, or rectangles.) How many sides does each polygon have?
- S: 4.
- T: On your personal white board, write the name for any four-sided polygon.
- S: (Write *quadrilateral*.)
- T: (Point to the square.) This quadrilateral has four equal sides and four right angles. On your board, write what type of quadrilateral it is.
- S: (Write *square*.)

Lesson 33:   Explain the connection of the area model of division to the long division algorithm for three- and four-digit dividends.

©2018 Great Minds®. eureka-math.org

EUREKA
MATH™
T: Rhombuses are quadrilaterals with four equal sides. Is this polygon a rhombus?

S: Yes.

T: Is it a rectangle?

S: Yes.

T: (Point to the rhombus that is not a square.) This polygon has four equal sides, but the angles are not the same. Write the name of this quadrilateral.

S: (Write *rhombus*.)

T: Is the square also a rhombus?

S: Yes!

T: (Point to the rectangle that is not a square.) This polygon has four equal angles, but the sides are not equal. Write the name of this quadrilateral.

S: (Write *rectangle*.)

T: Draw a quadrilateral that is not a square, rhombus, or rectangle.

Group Counting (4 minutes)

Note: This fluency activity prepares students to divide with remainders.

Direct students to count forward and backward, occasionally changing the direction of the count.

- Sixes to 60
- Sevens to 70
- Eights to 80
- Nines to 90

> **NOTES ON**
> **MULTIPLE MEANS**
> **OF REPRESENTATION:**
>
> Allow those students who consistently struggle with group counting at the pace of the majority of the class to count by the given multiple on a personal white board. Monitor their progress from one session to the next.

Multiply Units (4 minutes)

Materials: (S) Personal white board

Note: This fluency activity reviews Lesson 4's content.

T: (Write $3 \times 3 =$ ___.) Say the multiplication sentence in unit form.

S: 3 ones × 3 = 9 ones.

T: Write the answer in standard form.

S: (Write 9.)

T: (Write $30 \times 3 =$ ___.) Say the multiplication sentence in unit form.

S: 3 tens × 3 = 9 tens.

T: Write the answer in standard form.

S: (Write 90.)

Continue with the following possible sequence: 3 hundreds × 3, 3 thousands × 3, 4 ones × 3, 4 tens × 3, 4 thousands × 3, 5 thousands × 2, 5 tens × 4, 5 hundreds × 8, and 8 tens × 6.

EUREKA MATH™   **Lesson 33:**   Explain the connection of the area model of division to the long   **455**
                                            division algorithm for three- and four-digit dividends.

©2018 Great Minds®. eureka-math.org

Application Problem (5 minutes)

Write an equation to find the unknown length of each rectangle. Then, find the sum of the two unknown lengths.

3 m | 600 square m | 3 m | 72 square m
The sum of the two unknown lengths is 224 meters.

$$\left(600 \div 3\right) + \left(72 \div 3\right)$$
$$= 200 \quad + \quad 24$$
$$= 224$$

$$3\overline{)72}$$ with 24 above, -6, 12, -12, 0

Note: This Application Problem serves as an introduction to today's Concept Development, in which students find the total unknown length of a rectangle with an area of 672 square meters.

Concept Development (33 minutes)

Materials: (S) Personal white board

Problem 1

672 ÷ 3 and 1,344 ÷ 6

T: Draw a rectangle with an area of 672 square inches and a width of 3 inches.

S: (Draw.)

T: Draw a new rectangle with the same area directly below, but partitioned to make it easy for you to divide each part using mental math and your knowledge of place value. (Allow time for students to work.)

T: Share with a partner how you partitioned your new rectangle.

S: I made one part 6 hundred, two parts of 3 tens, and one part 12 ones. → I made two parts of 3 hundreds, one part of 6 tens, and one part 12 ones. → I made mine one part 6 hundred and two parts 36.

T: Draw a number bond to match the whole and parts of your rectangles.

S: (Draw bonds as pictured to the right.)
$$\left(600 \div 3\right) + \left(30 \div 3\right) + \left(30 \div 3\right) + \left(12 \div 3\right)$$
$$200 + \quad 10 \quad + \quad 10 \quad + \quad 4$$
$$= 224$$

3 | 300 | 300 | 60 | 12
$$\left(300 \div 3\right) + \left(300 \div 3\right) + \left(60 \div 3\right) + \left(12 \div 3\right)$$
$$= 100 \quad + \quad 100 \quad + \quad 20 \quad + \quad 4$$
$$= 224$$

Lesson 33:   Explain the connection of the area model of division to the long division algorithm for three- and four-digit dividends.

©2018 Great Minds®. eureka-math.org

EUREKA MATH™

T: Find the unknown side lengths of the smaller rectangles, and add them to find the length of the largest rectangle.

T: Take a moment to record the number sentences, reviewing with your partner the connection to both the number bond and the area model.

Those who finish early can find other ways to decompose the rectangle or work with 1,344 ÷ 6.

T: (Allow students to work for about four minutes.)

T: What were some ways you found to partition 1,344 to divide it easily by 6?

S: We chopped it into 12 hundreds, 12 tens, and 24 ones. → We decomposed it as 2 six hundreds, 2 sixties, and 24. → I realized 1,344 is double 672. But, 6 is double 3 and that's like the associative property 224 × 2 × 3, so 1,344 ÷ 6 equals 672 ÷ 3.
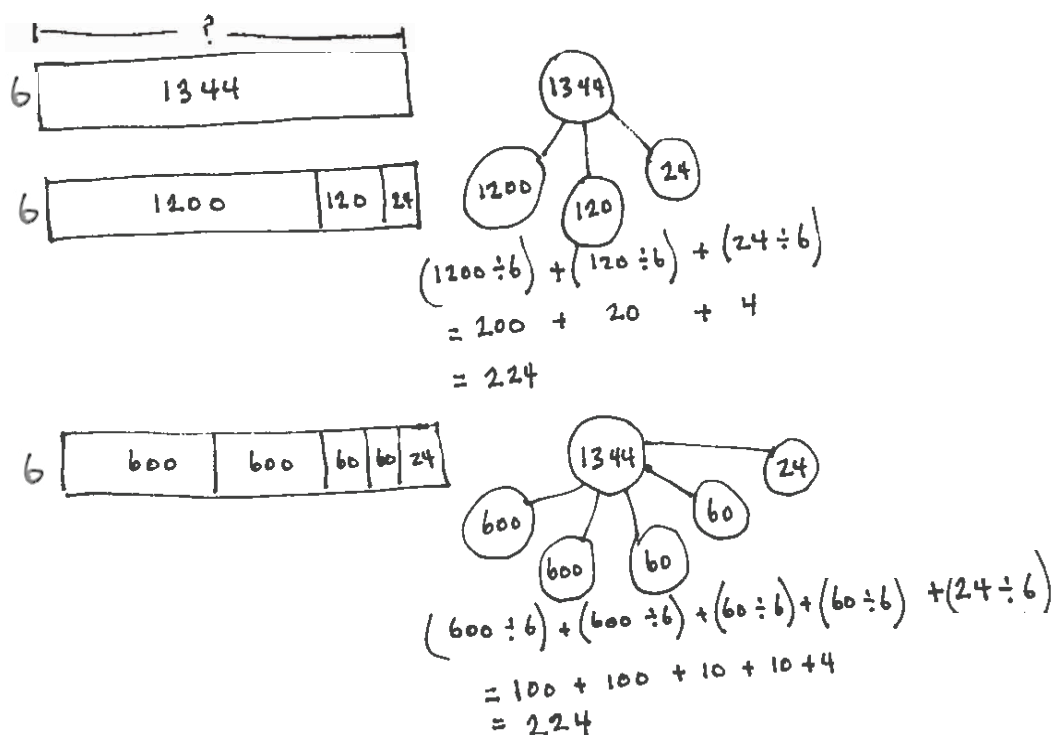

T: How can we see from our bonds that 1,344 is double 672?

S: When we chopped up the rectangles, I saw 600, 60, and 12 made 672, and the chopped up rectangle for 1,344 had two of all those!

T: Explain to your partner why different ways of partitioning give us the same correct side length.

S: You are starting with the same amount of area but just chopping it up differently. → The sum of the lengths is the same as the whole length. → You can take a total, break it into two or more parts, and divide each of them separately.

EUREKA MATH™

Lesson 33:   Explain the connection of the area model of division to the long division algorithm for three- and four-digit dividends.

457

©2018 Great Minds®. eureka-math.org

Problem 2

672 ÷ 3

T: (Write 672 ÷ 3.) This expression can describe a rectangle with an area of 672 square units. We are trying to find out the length of the unknown side.

T: What is the known side length?

S: 3.

T: (Draw a rectangle with a width of 3.) Three times how many hundreds gets us as close as possible to an area of 6 hundred square units? (Point to the 6 hundreds of the dividend.)

S: 2 hundreds.

T: Let's give 2 hundreds to the length. (Label 2 lengths of hundreds.) Let's record the 2 hundreds in the hundreds place.

T: What is 3 times 2 hundreds?

S: 6 hundreds. (Record 6 below the 6 hundreds.)

T: How many square units is that?

S: 600 square units. (Record 600 square units in the rectangle.)

T: How many hundreds remain?

S: Zero.

T: (Record 0 hundreds below the 6 hundreds.) 0 hundreds and 7 tens is…? (Record the 7 tens to the right of the 0 hundreds.)

S: 7 tens.

T: We have 70 square units left with a width of 3. (Point to the 7 tens in the algorithm.) Three times how many tens gets us as close as possible to 7 tens?

S: 2 tens.

T: Let's give 2 tens to the length.

T: 3 times 2 tens is?

S: 6 tens.

T: How many square units?

S: 60 square units.

T: 7 tens minus 6 tens is?

S: 1 ten.

Explain the connection of the area model of division to the long division algorithm for three- and four-digit dividends.

©2018 Great Minds®. eureka-math.org

EUREKA
MATH™

T: That is 10 square units of area to add to 2 square units. The remaining area is…?

S: 12 square units!

T: Three times how many ones gets us as close as possible to 12 ones?

S: 4 ones.

T: Let's give 4 ones to the length.

T: Three times 4 ones is…?

S: 12 ones.

T: Do we have any remaining area?

S: No!

T: What is the length of the unknown side?

S: 224 length units.

T: Review our drawings and our process with your partner. Try to reconstruct what we did step by step before we try another one. (Allow students time to review.)

T: We solved 672 divided by 3 in two very different ways using the area model. First we started with the whole rectangle and partitioned it. The second way was to go one place value at a time and make the whole rectangle from parts.

Give students the chance to try the following problems in partners, in a small group with the teacher, or independently, as they are able.

$539 \div 2$

This first practice problem has an easy divisor and a remainder in the ones. Guide students to determine the greatest length possible first for the remaining area at each place value.

$438 \div 5$

This next practice problem involves seeing the first area as 40 tens and having a remainder of 3 in the ones.

$1,216 \div 4$

The final practice problem involves a four-digit number. Like the previous example, students must see the first area as 12 hundreds and the next area as 16 ones.

Problem Set (13 minutes)

Students should do their personal best to complete the Problem Set within the allotted 13 minutes. For some classes, it may be appropriate to modify the assignment by specifying which problems they work on first. Some problems do not specify a method for solving. Students should solve these problems using the RDW approach used for Application Problems.

> **NOTES ON MULTIPLE MEANS OF ACTION AND EXPRESSION:**
>
> Guide English language learners and students working below grade level who may not complete the Problem Set in the allotted 13 minutes to set specific goals for their work. After briefly considering their progress, strengths, and weaknesses, have students choose the problems they will solve strategically. For example, a learner who is perfecting sequencing his written explanations might choose Problem 2. Connect this short-term goal to long-term goals.

459

Student Debrief (10 minutes)

Lesson Objective: Explain the connection of the area model of division to the long division algorithm for three- and four-digit dividends.

The Student Debrief is intended to invite reflection and active processing of the total lesson experience.

Invite students to review their solutions for the Problem Set. They should check work by comparing answers with a partner before going over answers as a class. Look for misconceptions or misunderstandings that can be addressed in the Debrief. Guide students in a conversation to debrief the Problem Set and process the lesson.

Any combination of the questions below may be used to lead the discussion.

- In Problem 1, is there another way Ursula could have represented the division problem with an area model? Would your number bond in 1(b) need revision if the area model changed?

- Compare your area model in Problem 2(a) to your partner's. Is it easier to solve the area model separating it into 2 parts, 3 parts, 4 parts, etc.?

- How do you decide how many parts are needed when building the area model for division?

- How are area models, number bonds, and the long division algorithm connected? Is there a correct order in which to use them to solve division problems?

Exit Ticket (3 minutes)

After the Student Debrief, instruct students to complete the Exit Ticket. A review of their work will help with assessing students' understanding of the concepts that were presented in today's lesson and planning more effectively for future lessons. The questions may be read aloud to the students.

460   Lesson 33:   Explain the connection of the area model of division to the long division algorithm for three- and four-digit dividends.

Topic H

Multiplication of Two-Digit by Two-Digit Numbers

Focus Standard:	■	Multiply a whole number of up to four digits by a one-digit whole number, and multiply two two-digit numbers, using strategies based on place value and the properties of operations. Illustrate and explain the calculation by using equations, rectangular arrays, and/or area models.
Instructional Days:	5	
Coherence -Links from:	G3–M1	Properties of Multiplication and Division and Solving Problems with Units of 2–5 and 10
	G3–M3	Multiplication and Division with Units of 0, 1, 6–9, and Multiples of 10
-Links to:	G5–M2	Multi-Digit Whole Number and Decimal Fraction Operations

Module 3 closes with Topic H as students multiply two-digit by two-digit numbers.

Lesson 34 begins this topic by having students use the area model to represent and solve the multiplication of two-digit multiples of 10 by two-digit numbers using a place value chart. Practice with this model helps to prepare students for two-digit by two-digit multiplication and builds the understanding of multiplying units of 10. In Lesson 35, students extend their learning to represent and solve the same type of problems using area models and partial products.

In Lesson 36, students make connections to the distributive property and use both the area model and four partial products to solve problems. Lesson 37 deepens students' understanding of multi-digit multiplication by transitioning from four partial products with representation of the area model to two partial products with representation of the area model and finally to two partial products without representation of the area model.

EUREKA MATH™
Topic H culminates at the most abstract level with Lesson 38 as students are introduced to the multiplication algorithm for two-digit by two-digit numbers. Knowledge from Lessons 34–37 provides a firm foundation for understanding the process of the algorithm as students make connections from the area model to partial products to the standard algorithm. Students see that partial products written vertically are the same as those obtained via the distributive property: 4 twenty-sixes + 30 twenty-sixes = 104 + 780 = 884.

| A Teaching Sequence Toward Mastery of Multiplication of Two-Digit by Two-Digit Numbers |

EUREKA MATH™

Lesson 34

Objective: Multiply two-digit multiples of 10 by two-digit numbers using a place value chart.

Suggested Lesson Structure

- ■ Fluency Practice   (12 minutes)
- ■ Application Problem   (5 minutes)
- ■ Concept Development   (33 minutes)
- ■ Student Debrief   (10 minutes)

   Total Time   **(60 minutes)**
Fluency Practice (12 minutes)

- ▪ Draw a Unit Fraction   (4 minutes)
- ▪ Divide Three Different Ways   (4 minutes)
- ▪ Multiply Units   (4 minutes)

Draw a Unit Fraction (4 minutes)

Materials: (S) Personal white board

Note: This fluency activity reviews Grade 3 geometry and fraction concepts in anticipation of Modules 4 and 5. Accept reasonable drawings. Using rulers and protractors is not necessary to review the concept and takes too long.

T: On your personal white boards, draw a quadrilateral with 4 equal sides and 4 right angles.

S: (Draw.)

T: What's the name of a quadrilateral with 4 equal sides and 4 right angles?

S: Square.

T: Partition the square into 3 equal parts.

S: (Partition.)

T: Shade in 1 part of 3.

S: (Shade.)

T: Write the fraction of the square that's shaded.

S: (Write $\frac{1}{3}$.)

Repeat the process, partitioning a rhombus into fourths, a rectangle into fifths, and a rectangle into eighths.

Lesson 34:   Multiply two-digit multiples of 10 by two-digit numbers using a place value chart.

EUREKA
MATH™

Divide Three Different Ways (4 minutes)

Materials: (S) Personal white board

Note: This fluency activity reviews content from Lessons 32 and 33.

- T: (Write 732 ÷ 6.) Solve this problem by drawing place value disks.
- S: (Solve.)
- T: Solve 732 ÷ 6 using the area model.
- S: (Solve.)
- T: Solve 732 ÷ 6 using the standard algorithm.
- S: (Solve.)

Continue with this possible suggestion: 970 ÷ 8.

Multiply Units (4 minutes)

Materials: (S) Personal white board

Note: This fluency activity reviews Lesson 4.

- T: (Write 4 ones × 3.) Solve. Say the multiplication sentence in unit form.
- S: 4 ones × 3 = 12 ones.
- T: Write the equation in standard form.
- S: (Write 4 × 3 = 12.)
- T: (Write 4 tens × 3.) Solve. Write the equation in standard form.
- S: (Write 40 × 3 = 120.)
- T: (Write 4 tens × 3 tens.) Solve. Write the equation in standard form.
- S: (Write 40 × 30 = 1,200.)
- T: (Write 3 × 2.) Solve. Say the multiplication sentence.
- S: 3 × 2 = 6.
- T: Write the equation in unit form.
- S: (Write 3 ones × 2 = 6 ones.)
- T: (Write 30 × 2.) Solve. Write the equation in unit form.
- S: (Write 3 tens × 2 = 6 tens.)
- T: (Write 30 × 20.) Solve. Write the equation in unit form.
- S: (Write 3 tens × 2 tens = 6 hundreds.)

Continue with the following possible sequence: 30 × 5, 30 × 50, 3 tens × 6, 3 tens × 6 tens, 50 × 4, 5 tens × 8 tens, and 60 × 50.

![EUREKA MATH™]   **Lesson 34:**   Multiply two-digit multiples of 10 by two-digit numbers using a place value chart.   **469**

©2018 Great Minds®. eureka-math.org

Application Problem (5 minutes)

Mr. Goggins planted 10 rows of beans, 10 rows of squash, 10 rows of tomatoes, and 10 rows of cucumbers in his garden. He put 22 plants in each row. Draw an area model, label each part, and then write an expression that represents the total number of plants in the garden.

$(4 \times 10) \times 22$
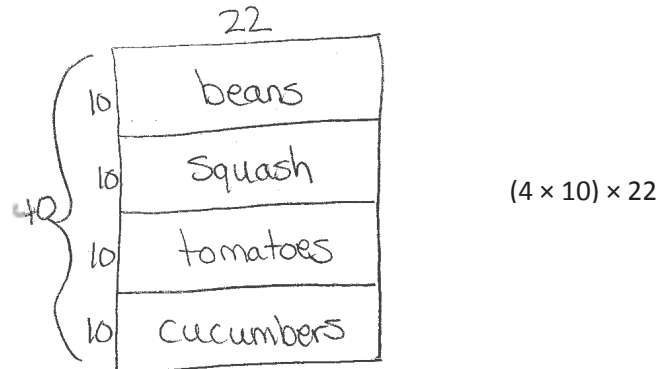

Note: This Application Problem builds on Topic B, where students learned to multiply by multiples of 10, and Topic C, where students learned to multiply two-digit by one-digit numbers using an area model. This Application Problem helps bridge to today's lesson as students learn to multiply multiples of 10 by two-digit numbers.

Concept Development (33 minutes)

Materials: (S) Personal white board, thousands place value chart (Lesson 4 Template)

Problem 1: Discover that 4 × 10 × 22 and 40 × 22 represent the same amount.

T: Look at the area model that we drew for the Application Problem. (Erase the names of the plants.)

T: How many 10 × 22 rectangles are there in the model?

S: 4.

T: Write an expression to show the entire length of the rectangle. (Indicate the vertical side length).

S: 4 × 10.

T: What is the area formula?

S: Length times width.

T: Discuss with your partner an expression to show the total area of the largest rectangle.

S: 40 times 22. → (4 × 10) × 22.

T: What can we say about the expressions (4 × 10) × 22 and 40 × 22?

S: They represent the same amount.

470   Lesson 34:   Multiply two-digit multiples of 10 by two-digit numbers using a place
                                   value chart.

©2018 Great Minds®. eureka-math.org

EUREKA
MATH™

T: How can you tell? Turn and talk to your partner.

S: The total length is 4 tens. → We can write 4 tens as 4 times 10 or 40. → You can either find the area of the smallest rectangle and multiply it by four or just multiply 40 times 22.

T: We can say that 40 × 22 = 4 × 10 × 22 or 10 × 4 × 22.

S: Yes.

T: That's good because we can solve 4 times 10 times 22, but 40 times 22 is new territory.

Problem 2: Multiply 40 × 22 using a place value chart.

Write:

        40 × 22 = (4 × 10) × 22
        40 × 22 = 4 × (10 × 22)
        40 × 22 = 10 × (4 × 22)

T: Show 22 on your place value chart.

T: Show 10 times as many. 10 × 22 is?

S: (Draw disks to show 22, and then draw arrows to show 10 times that amount.)

T: How many hundreds? How many tens?

S: 2 hundreds and 2 tens.

T: Show 4 times as many.

S: (Draw disks to show 3 more groups of 2 hundreds 2 tens.)

T: Tell how many you have now.

S: 8 hundreds and 8 tens.

T: What number does that represent? Say the number sentence.

S: 4 × (10 × 22) = 880. → 40 × 22 = 880.

Repeat the process, this time beginning by multiplying 22 by 4 as in the model above and to the right. (Write 40 × 22 = (10 × 4) × 22 = 10 × (4 × 22).)

EUREKA
MATH™

Lesson 34:   Multiply two-digit multiples of 10 by two-digit numbers using a place value chart.

©2018 Great Minds®. eureka-math.org

471

Next, have students see that they can conceive of the problem as 40 times 22, as pictured below, without breaking the process into the two steps of multiplying by 4 and 10 in whatever order.
Problem 3: Multiply 50 × 31 using a place value chart.

T: What is another way to express 50 × 31?

S: 10 × (5 × 31). → 5 × (10 × 31).

T: Tell your partner why you chose to represent 50 using the numbers 5 and 10.

S: 50 = 5 × 10. I know how to multiply by 10 and by 5, but I don't know how to multiply by 50.

T: Yes, you are using the associative property, which allows us to use the factors of a number to help us multiply. What factors did we use for 50?

S: 5 and 10.

T: Show 31 on your place value chart.

T: Show 10 times as many.

S: (Draw disks to show 31, and then draw arrows to show 10 times that amount.)

T: How many hundreds? How many tens?

S: 3 hundreds and 1 ten.

T: Show 5 times as many.

S: (Draw disks to show 4 more groups of 3 hundreds 1 ten.)

T: Tell how many you have now.

S: 15 hundreds and 5 tens. I change 10 hundreds for one thousand. I have 1 thousand, 5 hundreds, and 5 tens.

T: What number does that represent?

S: 1,550.

> **NOTES ON MULTIPLE MEANS OF REPRESENTATION:**
>
> You may present the following scaffolds to assist students in organizing and keeping track of arrays of place value disks:
>
> - Alternate colors as they draw 5 rows of 3 hundreds.
> - Give extra time to model.
> - Couple disks with words (e.g., 3 hundreds × 5).
> - Use manipulatives at first, and then transition to drawings.

EUREKA MATH™

©2018 Great Minds®. eureka-math.org
Problem 4: Multiply 50 × 31 without using a place value chart.

T: 50 × 31 is the same 50 × (30 + 1). Discuss with your partner why this is true.

S: We drew 31 as 3 tens and 1 one on the place value chart and multiplied each unit by 50. → 50 groups of 31 is the same as 50 groups of 30 and 50 groups of 1. → It's the break apart and distribute property! → It's the distributive property!

T: 50 × (30 + 1) = 50 × 30 + 50 × 1. Can you see that on our place value chart? (Show that on the place value chart.) At first, we broke apart 50 into 10 × 5 or 5 × 10, but, in the end, we just thought of it as 50 × 31.

T: Let's say 50 × 30 + 50 × 1 in unit language.

S: 5 tens × 3 tens + 5 tens × 1 one.

T: 5 tens times 3 tens is…?

S: 15 hundreds.

T: 5 tens times 1 one is…?

S: 5 tens.

T: 15 hundreds + 5 tens is…?

S: 1,550.

T: 50 × 31 is…?

S: 1,550.

T: Did we get the same product just by multiplying that we did when we used the chart?

S: Yes.

Problem Set (10 minutes)

Students should do their personal best to complete the Problem Set within the allotted 10 minutes. For some classes, it may be appropriate to modify the assignment by specifying which problems they work on first. Some problems do not specify a method for solving. Students should solve these problems using the RDW approach used for Application Problems.

Lesson 34:   Multiply two-digit multiples of 10 by two-digit numbers using a place value chart.

473

©2018 Great Minds®. eureka-math.org

Student Debrief (10 minutes)

Lesson Objective: Multiply two-digit multiples of 10 by two-digit numbers using a place value chart.

The Student Debrief is intended to invite reflection and active processing of the total lesson experience.

Invite students to review their solutions for the Problem Set. They should check work by comparing answers with a partner before going over answers as a class. Look for misconceptions or misunderstandings that can be addressed in the Debrief. Guide students in a conversation to debrief the Problem Set and process the lesson.

Any combination of the questions below may be used to lead the discussion.

- In Problem 1(a), is it best to model 30 or 24 on the chart initially? Why?
- Tell your partner how you used the associative property in Problem 3(a). Is there an order you find easier for multiplying the three factors like when multiplying using the place value chart?
- Why was it helpful to break the multiple of 10 into two factors before solving?
- How did distributing the second factor in Problem 4 of the Concept Development make it easier to solve?
- Compare Problems 3(a) and 4(a). Why did you get the same answer by using two different methods? What does this tell you about the associative and distributive property? Compare their processes. How are they different?
- How did representing the multiplication with disks help you solve and understand the multiplication?
- How did the Application Problem connect to today's lesson?

Exit Ticket (3 minutes)

After the Student Debrief, instruct students to complete the Exit Ticket. A review of their work will help with assessing students' understanding of the concepts that were presented in today's lesson and planning more effectively for future lessons. The questions may be read aloud to the students.

▪ Draw and Label Unit Fractions	(4 minutes)
▪ Divide Three Different Ways	(4 minutes)
▪ Multiply by Multiples of 10	(4 minutes)

Draw and Label Unit Fractions (4 minutes)

Materials: (S) Personal white board

Notes: This fluency activity reviews Grade 3 geometry and fraction concepts in anticipation of Modules 4 and 5. Accept reasonable drawings. Using rulers and protractors is not necessary to review the concept and takes too long.

T: On your personal white boards, write the name for any four-sided figure.
S: (Write *quadrilateral*.)
T: Draw a quadrilateral that has 4 right angles but not 4 equal sides.
S: (Draw a rectangle that is not a square.)
T: Partition the rectangle into 3 equal parts.
S: (Partition.)
T: Label the whole rectangle as 1. Write the unit fraction in each part.

Continue partitioning and labeling with the following possible sequence: a square as 4 fourths, a rhombus as 2 halves, a square as 5 fifths, and a rectangle as 6 sixths.

Lesson 35:   Multiply two-digit multiples of 10 by two-digit numbers using the area model.

©2018 Great Minds®. eureka-math.org

EUREKA MATH™

Divide Three Different Ways (4 minutes)

Materials: (S) Personal white board

Note: This fluency activity reviews content from Lessons 32 and 33.

- T: (Write 348 ÷ 6.) Find the quotient using place value disks.
- S: (Solve.)
- T: Find the quotient using the area model.
- S: (Solve.)
- T: Find the quotient using the standard algorithm.
- S: (Solve.)

Continue for 2,816 ÷ 8.

Multiply by Multiples of 10 (4 minutes)

Materials: (S) Personal white board

Note: This fluency activity reviews Lesson 34's content.

- T: (Write 40 × 22 = 22 × 10 × ___.) On your personal white boards, fill in the unknown factor to create a multiplication sentence.
- S: (Write 40 × 22 = 22 × 10 × 4.)
- T: What's 22 × 10?
- S: 22 × 10 = 220.
- T: (Write 220 × 4 = ___.) On your boards, write the answer.
- S: (Write 220 × 4 = 880.)

40 x 22 = 22 x 10 x 4
40 x 22 = 220 x 4
40 x 22 = 880

Continue with the following possible sequence: 30 × 21, 30 × 43, and 50 × 39.

Application Problem (6 minutes)

Materials: (S) Thousands place value chart (Lesson 4 Template)

For 30 days out of one month, Katie exercised for 25 minutes a day. What is the total number of minutes that Katie exercised? Solve using a place value chart.

Note: This Application Problem builds on the content of Lesson 34 by using a place value chart to represent and then multiply a multiple of 10 by a two-digit number. Although some students may easily solve this problem using mental math, encourage them to see that the model verifies their mental math skills. Students can use their mental math and place value chart solution to verify their answer in Problem 1 of the Concept Development.

Katie exercised for 750 minutes.

EUREKA MATH™

Lesson 35:   Multiply two-digit multiples of 10 by two-digit numbers using the area model.

481

©2018 Great Minds®. eureka-math.org

Concept Development (32 minutes)

Materials: (S) Personal white board

Problem 1: Find the product of 30 and 25 using an area model to solve.

T: Aside from the place value chart, what is another way
     that we have represented multiplication?

S: Arrays. → Equal groups. → The area model.

T: Let's use an area model to show 30 × 25.
     Since 30 × 25 = 10 × (3 × 25), let's represent 3 × 25 first
     since we already know how to draw area models for
     one-digit by two-digit multiplication. (Draw an area
     model to represent 3 × 25.) We've decomposed 3 × 25
     into what two products? Give me an expression for
     each in unit form.

S: 3 × 2 tens and 3 × 5 ones.

T: 3 × 2 tens is?

S: 6 tens.

T: And, 3 × 5 ones?

S: 15 ones.

T: So, 3 × 25 is?

S: 75.

T: What unit does this 3 have right now?

S: Ones.

T: Let's change that unit. Let's make it tens. (Draw the
     new area model.) What new multiplication problem is
     represented?

S: 30 × 25.

T: Let's find the total area by finding partial products
     again. (Point to the 30 by 5 rectangle.) In unit form,
   give me a multiplication sentence to find the area of
     this portion.

S: 3 tens × 5 = 15 tens.

T: Do we need to put a unit on the 5?

S: It would be ones. → We don't always have to say the
     unit when it's just ones.

T: (Record as shown. Then, point to the 30 by 20
     rectangle.) In unit form, give me a multiplication
     sentence to find the area of this rectangle.

S: 3 tens × 2 tens = 6 hundreds.

20   5

3

60 + 15 = 75

20   5

30 × 20   30×5
3tens × 2tens 3tens×5
6 hundreds   15 tens
600   150

30

600 + 150 = 750

**NOTES ON
MULTIPLE MEANS
OF REPRESENTATION:**

Help students understand that
multiplying tens, unlike adding, results
in a larger unit. Here, 3 tens times 2
tens is 6 hundreds, not 6 tens. To
clarify, refer back to the magnifying
arrows on the place value chart, the
number form, or place value blocks
(cubes, longs, and flats).

482   Lesson 35:   Multiply two-digit multiples of 10 by two-digit numbers using the area
                                    model.

                         ©2018 Great Minds®. eureka-math.org

                                                                                    EUREKA
                                                                                    MATH™

T: I noticed this time you gave me the units of both factors. Why?

S: They were both tens. → This way, I can just think of 3 × 2, and all I have to do is figure out what the new unit will be. → Tens times tens gives me hundreds.

T: Find the product for 30 × 25, and discuss with your partner how the two products, (3 × 25) and (30 × 25), are related.

S: One was 75 and the other was 750. That's 10 times as much. → The first was 6 tens plus 15 ones. The other was 6 hundreds plus 15 tens. → For the first one, we did 3 × 5 and 3 × 20. On the second, we just multiplied the 3 by 10 and got 30 × 5 and 30 × 20. That's 150 + 600, or 750. → The only difference was the unit on the 3. 3 ones were changed to 3 tens.

Problem 2: Find the product of 60 and 34 using an area model. Record the partial products to solve.

T: Draw an area model to represent 60 × 34, and then write the expressions that solve for the area of each rectangle.

S: (Draw area model and write expressions.)

T: Write 60 × 34 vertically next to the area model, and then record the partial products beginning with the area of the smaller rectangle.

S: (Record partial products as 240 and 1,800.)

T: What does the partial product of 240 represent?

S: The area of the small rectangle. → 6 tens times 4.

T: What does the partial product of 1,800 represent?

S: The area of the larger part. → 6 tens times 3 tens.

T: How do we find the product for 60 × 34?

S: We need to add the partial products.
   240 + 1,800 = 2,040. → 60 × 34 = 2,040.
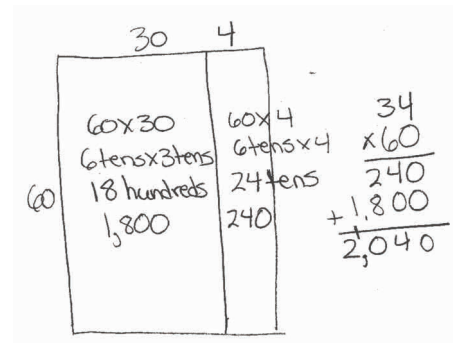

> **NOTES ON MULTIPLE MEANS OF ACTION AND EXPRESSION:**
>
> Some learners may benefit from graph paper or lines outlining the place values to assist their accurate recording of the partial products.

Problem 3: Find the product of 90 and 34 without using an area model. Record the partial products to solve.

T: Write 90 × 34 vertically. If we were to create an area model to solve 90 × 34, what would it look like?

S: It would be 90 units by 34 units. The 34 would be split into two parts: 30 and 4.

T: Imagine the area model, and use it to record the two partial products using the vertical written method. Then, use unit language to explain to your partner how you solved the problem.
Circulate and listen for phrases such as 9 tens times 4 and 9 tens × 3 tens. Ensure students are accurately lining up digits in the appropriate place value columns.

Repeat with 30 × 34.

EUREKA MATH™

Lesson 35:   Multiply two-digit multiples of 10 by two-digit numbers using the area model.

Problem Set (10 minutes)

Students should do their personal best to complete the Problem Set within the allotted 10 minutes. For some classes, it may be appropriate to modify the assignment by specifying which problems they work on first. Some problems do not specify a method for solving. Students should solve these problems using the RDW approach used for Application Problems.

Student Debrief (10 minutes)

Lesson Objective: Multiply two-digit multiples of 10 by two-digit numbers using the area model.

The Student Debrief is intended to invite reflection and active processing of the total lesson experience.

Invite students to review their solutions for the Problem Set. They should check work by comparing answers with a partner before going over answers as a class. Look for misconceptions or misunderstandings that can be addressed in the Debrief. Guide students in a conversation to debrief the Problem Set and process the lesson.

Any combination of the questions below may be used to lead the discussion.

- How is Problem 1 of the Problem Set less complex than the others?
- How do Problems 3–7 lend themselves to the use of the area model?
- Can you explain why Problems 6 and 7 have the same product?
- What can you say about area models for Problems 8 and 9?
- When we record partial products, do we have to start with the one with the smallest place value? Will we get a different result if we start with the tens?
- When we multiply by a multiple of 10, why is there always a 0 in the ones place?
- What significant math vocabulary did we use today to communicate precisely?
- How did the Application Problem connect to today's lesson?

Lesson 35:   Multiply two-digit multiples of 10 by two-digit numbers using the area model.

Lesson 36

Objective: Multiply two-digit by two-digit numbers using four partial products.

Suggested Lesson Structure

■ Fluency Practice   (12 minutes)
■ Application Problem   (6 minutes)
■ Concept Development   (32 minutes)
■ Student Debrief   (10 minutes)

Total Time   **(60 minutes)**

Fluency Practice (12 minutes)

▪ Draw a Unit Fraction   (4 minutes)
▪ Divide Three Different Ways   (4 minutes)
▪ Multiply by Multiples of 10 Written Vertically   (4 minutes)

Draw a Unit Fraction (4 minutes)

Materials: (S) Personal white board

Note: This fluency activity reviews Grade 3 geometry and fraction concepts in anticipation of Modules 4 and 5. Accept reasonable drawings. Using rulers is not necessary to review the concept and takes too long.

T: On your personal white boards, write the name for any four-sided figure.
S: (Write *quadrilateral*.)
T: Draw a quadrilateral that has 4 right angles and 4 equal sides.
S: (Draw a square.)
T: Partition the square into 4 equal parts.
S: (Partition.)
T: Shade in 1 of the parts.
S: (Shade.)
T: Write the fraction of the square that you shaded.
S: (Write $\frac{1}{4}$.)

Continue with the following possible sequence: Partition a rectangle into 5 equal parts, shading $\frac{1}{5}$; partition a rhombus into 2 equal parts, shading $\frac{1}{2}$; partition a square into 12 equal parts, shading $\frac{1}{12}$; and partition a rectangle into 8 equal parts, shading $\frac{1}{8}$.

Divide Three Different Ways (4 minutes)

Materials: (S) Personal white board

Note: This fluency activity reviews Lessons 32 and 33.

- T: (Write 406 ÷ 7.) Find the quotient using place value disks.
- T: Find the quotient using the area model.
- T: Find the quotient using the standard algorithm.

Repeat using 3,168 ÷ 9.

Multiply by Multiples of 10 Written Vertically (4 minutes)

Materials: (S) Personal white board

Note: This fluency activity reviews Lesson 35's content.

- T: (Write 30 × 23 vertically.) When I write 30 × 23, you say "3 tens times 3 ones plus 3 tens times 2 tens." (Point to the corresponding expressions as students speak.)
- S: 3 tens times 3 ones + 3 tens times 2 tens.
- T: Write and solve the entire equation vertically.
- T: What is 30 times 23?
- S: 690.

Continue with the following possible sequence: 30 × 29, 40 × 34, and 50 × 45.

Application Problem (6 minutes)

Mr. Goggins set up 30 rows of chairs in the gymnasium. If each row had 35 chairs, how many chairs did Mr. Goggins set up? Draw an area model to represent and to help solve this problem. Discuss with a partner how the area model can help you solve 30 × 35.

Note: This Application Problem builds on prior learning from Lesson 35 where students used an area model and partial products to multiply a two-digit multiple of 10 by a two-digit number using an area model. This Application Problem also helps bridge to today's lesson in that students apply prior knowledge of the area model and partial products to represent and solve two-digit by two-digit multiplication.

Lesson 36:   Multiply two-digit by two-digit numbers using four partial products.

EUREKA MATH™
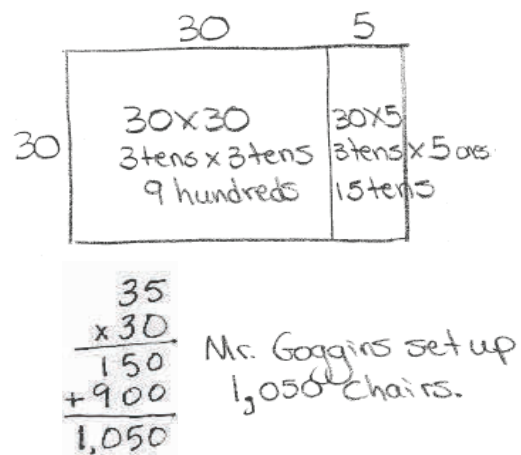

Concept Development (32 minutes)

Materials: (S) Personal white board

Problem 1: Use the distributive property to represent and solve two-digit by two-digit multiplication.

T: (Use the context of the Application Problem to continue with today's lesson.) Mr. Goggins set up an additional 4 rows of chairs with 35 chairs in each row. Let's change our area model to represent the additional rows. (Revise the area model.)

T: What is the length of this entire side? (Point to the vertical length.)

S: 34.

T: And the length of this side? (Point to the horizontal length.)

S: 35.

T: Use the area formula. What expression is shown by the area model now?

S: 34 × 35.

T: We can use the area model to help us represent two-digit times two-digit multiplication. Write the expressions that represent the areas of the two smaller rectangles that we just created.

S: 4 × 5 and 4 × 30.

T: Let's say the expressions in unit form to help us understand their value. Using the units for each factor, say 4 × 5 and 4 × 30 in unit form.

S: 4 ones × 5 ones and 4 ones × 3 tens.

T: Write those unit expressions in each rectangle. How can we use these expressions and the expressions of the other two rectangles to find the area of the whole rectangle?

S: We can find the sum of all of the smaller areas.

T: Let's represent this using the distributive property. We are going to move from top to bottom, right to left to represent the areas of the smaller rectangles. You tell me the numerical expressions as I point to each of the smaller rectangles. I will write what you say. 34 × 35 equals…?

S: 34 × 35 = (4 × 5) + (4 × 30) + (30 × 5) + (30 × 30).

T: Now, express this same number sentence in unit form (without rewriting).

S: 34 × 35 = (4 ones × 5 ones) + (4 ones × 3 tens) + (3 tens × 5 ones) + (3 tens × 3 tens).

T: Now, we are ready to solve! First, let's find each of the four partial products. Then, we can add the four partial products to find 34 × 35.

S: 20 ones + 12 tens + 15 tens + 9 hundreds = 20 + 120 + 150 + 900 = 1,190.
**Problem 2: Find the product of 23 and 31 using an area model and partial products to solve.**

T: Let's solve 23 × 31 using area to model the product.

T: (Draw a rectangle.) Break down the length and width according to place value units.

S: 2 tens 3 ones and 3 tens 1 one. → 20 and 3. 30 and 1.

T: (Draw one vertical and one horizontal line subdividing the rectangle.) Turn and tell your partner the length and width of each of the 4 smaller rectangles we just created.

S: 3 and 1, 3 and 30, 20 and 1, and 20 and 30.

T: Using the area model that you just drew, write an equation that represents the product of 23 and 31 as the sum of those four areas.

S: 23 × 31 = (3 × 1) + (3 × 30) + (20 × 1) + (20 × 30).

T: Now, we are ready to solve!

T: Let's look at a way to record the partial products. (Write 23 × 31 vertically.) Recall that when we multiplied a one-digit number by a two-, three-, or four-digit number, we recorded the partial products. We also recorded partial products when we multiplied a two-digit number by a multiple of 10. Let's put it all together and do precisely the same thing here.

T: (Point to the area model and the expression showing the distributive property.) What is the product of 3 ones and 1 one?

S: 3 ones.

T: Record the product below. Draw an arrow connecting the rectangle with the corresponding partial product. How about 3 ones times 3 tens?

S: 9 tens.

T: Record the product below the first partial product. Draw an arrow connecting the rectangle with the corresponding partial product. What is 2 tens times 1 one?

S: 2 tens or 20.

T: As before, record the partial product below the other two and do the same with 2 tens times 3 tens.

T: Draw arrows to connect the new partial products with the corresponding rectangles. Now, let's add the partial products together. What is the sum?

S: The sum is 713. That means that 23 × 31 = 713.
494   **Lesson 36:**   Multiply two-digit by two-digit numbers using four partial products.

EUREKA MATH™

Problem 3: Find the product of 26 and 34 using partial products. Verify partial products using the area model.

    T: Draw an area model to represent 26 × 34.

    T: How do I find the area of the smallest rectangle?

    S: Multiply 6 ones times 4 ones.

    T: Point to 6 ones times 4 ones in the algorithm. What is 6 ones times 4 ones?

    S: 24 ones.

    T: Record 24 beneath the expression and in the corresponding area.

    T: Point to the next area to solve for. Tell me the expression.

    S: 6 ones times 3 tens.

    T: Locate those numbers in the algorithm. Solve for 6 ones times 3 tens.

    S: 18 tens.

    T: Record 18 tens under the expression.

    S: We can also record 18 tens in this rectangle.
Continue connecting the width and length of each rectangle in the model to the location of those units in the algorithm. Record the partial products first under the expression and then inside the area.

    T: What is the last step?

    S: Add together all of the partial products. 24 + 180 + 80 + 600 = 884. → 26 × 34 = 884.

Problem 4: Find the product of 26 and 34 without using an area model. Record the partial products to solve.

    T: Take a mental picture of your area model before you erase it, the partial products, and the final product.

    T: When we multiplied these numbers before, with what did we start?

    S: 6 ones × 4 ones.

    T: Do you see 6 ones × 4 ones?

    S: Yes.

Students point to 6 ones × 4 ones. You might model on the board as students also record.

    T: What is 6 ones × 4 ones?

    S: 24 ones.

    T: Record 24 ones as a partial product.

    T: What did we multiply next?

    S: 6 ones × 3 tens. That's 18 tens or 180.

    T: Where do we record 180?

    S: Below the 24.
T: Now what?

S: We multiply the tens. 2 tens × 4 ones and then 2 tens × 3 tens.

T: What are 2 tens × 4 ones and 2 tens × 3 tens?

S: 8 tens and 6 hundreds.

T: Let's record these as partial products. Notice that we have four partial products. Let's again identify from where they came. (Point to each part of the algorithm as students chorally read the expressions used to solve the two-digit by two-digit multiplication.)

S: 6 ones × 4 ones = 24 ones. 6 ones × 3 tens = 18 tens. 2 tens × 4 ones = 8 tens.
    2 tens × 3 tens = 6 hundreds.

T: What is their sum?

S: 24 + 180 + 80 + 600 = 884. → 26 × 34 = 884.

T: Visualize to relate this back to the area model that we drew earlier.

Repeat for 38 × 43. You might first draw the area model (without multiplying out the partial products) and then erase it so that students again visualize the connection.

Problem Set (10 minutes)

Students should do their personal best to complete the Problem Set within the allotted 10 minutes. For some classes, it may be appropriate to modify the assignment by specifying which problems they work on first. Some problems do not specify a method for solving. Students should solve these problems using the RDW approach used for Application Problems.

Student Debrief (10 minutes)

Lesson Objective: Multiply two-digit by two-digit numbers using four partial products.

The Student Debrief is intended to invite reflection and active processing of the total lesson experience.

Invite students to review their solutions for the Problem Set. They should check work by comparing answers with a partner before going over answers as a class. Look for misconceptions or misunderstandings that can be addressed in the Debrief. Guide students in a conversation to debrief the Problem Set and process the lesson.

Any combination of the questions below may be used to lead the discussion.

- How does Problem 1(a) support your understanding of the distributive property and partial products?

- How do Problems 1 and 2 help to prepare you to solve Problems 3, 4, 5, and 6?

- How did our previous work with area models and partial products help us to be ready to solve two-digit by two-digit multiplication problems using partial products?

- How is it helpful to think about the areas of each rectangle in terms of *units*?

- How could you explain to someone that *ones × tens* equals *tens* but *tens × tens* equals *hundreds*?

- What significant math vocabulary did we use today to communicate precisely?

- How did the Application Problem connect to today's lesson?

Exit Ticket (3 minutes)

After the Student Debrief, instruct students to complete the Exit Ticket. A review of their work will help with assessing students' understanding of the concepts that were presented in today's lesson and planning more effectively for future lessons. The questions may be read aloud to the students.

Name _____ Date _____

1. a. In each of the two models pictured below, write the expressions that determine the area of each of the four smaller rectangles.

   b. Using the distributive property, rewrite the area of the large rectangle as the sum of the areas of the four smaller rectangles. Express first in number form, and then read in unit form.

   14 × 12 = (4 × _____) + (4 × _____) + (10 × _____) + (10 × _____)

2. Use an area model to represent the following expression. Record the partial products and solve.

   14 × 22

$$\begin{array}{r} 2\ 2 \\ \times\ \ 1\ 4 \\ \hline \\ \hline \\ \hline \\ +\ \underline{} \end{array}$$

■ Application Problem   (5 minutes)
■ Concept Development   (35 minutes)
■ Student Debrief   (10 minutes)
  Total Time   **(60 minutes)**

Fluency Practice (10 minutes)

▪ Decompose 90 and 180   (4 minutes)
▪ Multiply by Multiples of 10 Written Vertically   (6 minutes)

Decompose 90 and 180 (4 minutes)

Materials: (S) Personal white board

Note: This fluency activity prepares students for composing and decomposing benchmark angles of 90 and 180 degrees in Module 4.

    T: (Project a number bond with a whole of 90 and a part of 10.) On your personal white boards, fill in the unknown part in the number bond.
    S: (Fill in 80.)
    T: (Write 90 – 10 = ____.) Say the subtraction sentence.
    S: 90 – 10 = 80.

Continue decomposing 90, taking away the following possible suggested parts: 20, 30, 85, 40, 45, 25, 35, and 15.

Using the same process, take away the following possible suggested parts from 180: 10, 100, 90, 70, 150, 60, 5, 15, 75, 65, and 45.

EUREKA MATH™   **Lesson 37:**   Transition from four partial products to the standard algorithm for   **503**
two-digit by two-digit multiplication.

Multiply by Multiples of 10 Written Vertically (6 minutes)

Materials:　(S) Personal white board

Note: This fluency activity reviews Lesson 35's content.

> T:　Solve 30 × 23 vertically as you say the unit form: 3 tens times 3 ones plus 3 tens times 2 tens. You have one minute. If you finish early, go on to 40 × 23.
>
> T:　(Allow students a minute to work.) 3 tens times 3 ones is…?
>
> S:　9 tens. (Write 90.)
>
> T:　3 tens times 2 tens is…?
>
> S:　6 hundreds. (Write 600.)
>
> T:　The sum of 90 and 600 is…?
>
> S:　690.
>
> T:　30 groups of 23 is…?
>
> S:　690.

Continue with the following possible sequence: 40 × 23, 40 × 34, 50 × 45, and 60 × 39.

Application Problem (5 minutes)

Sylvie's teacher challenged the class to draw an area model to represent the expression 24 × 56 and then to solve using partial products. Sylvie solved the expression as seen to the right. Is her answer correct? Why or why not?

Note: This Application Problem builds on the content of Lessons 34, 35, and 36. Students now have a solid foundation upon which to build understanding of two-digit by two-digit multiplication. They move from pictorial representations to abstract representations. This Application Problem guides such movement and builds to the content of today's lesson where students see how all of the work that they have done fits together and prepares them to solve using the standard algorithm (Lesson 38).

$$
\begin{array}{r}
56 \\
\times\,24 \\
\hline
24 \\
200 \\
12 \\
+100 \\
\hline
336
\end{array}
$$

Sylvie's answer is not correct.
She drew the area model correctly,
but she made 2 mistakes when
she multiplied. Sylvie wrote that
20 × 6 = 12. It should be 120 since
2 tens × 6 = 12 tens = 120. She also
wrote that 20 × 50 = 100. It should
be 1,000 since 2 tens × 5 tens = 10 hundreds.
10 hundreds = 1 thousand.

504　　　Lesson 37:　　Transition from four partial products to the standard algorithm for two-digit by two-digit multiplication.

©2018 Great Minds®. eureka-math.org

EUREKA
MATH™

Concept Development (35 minutes)

Materials: (S) Paper, pencil

Problem 1: Solve 26 × 35 using four partial products and two partial products.

   T: Work with a partner:

       1.   Draw an area model for 26 × 35.

       2.   Record the partial products within each of four smaller rectangles.

       3.   Write the expression 26 × 35 vertically.

       4.   Write the four partial products under the expression.

       5.   Find their sum.

       6.   Connect the rectangles in the area model to the partial products using arrows.

   S: (Draw area model and solve.) 26 × 35 = 910.

   T: Shade the top half of the area model with the side of your pencil. Shade the corresponding partial products as well.
   T: Use mental math to add the two partial products that you just shaded.

   S: 30 + 180 = 210.

   T: What multiplication expression can be used to represent the entire shaded area?

   S: 6 × 35.

   T: Find the total for 6 thirty-fives.

   S: (Solve.)

   S: 6 × 35 = 210. Hey, that's the same as when we added the two partial products that are shaded.

   T: Explain why they are the same.

   S: The two smaller rectangles in the shaded portion take up the same amount of space as the larger rectangle in the shaded portion.

   T: Use mental math to add the two partial products that are not shaded.

   S: 100 + 600 = 700.

   T: What expression can be used to represent the area of the larger rectangle that is not shaded?

Lesson 37:   Transition from four partial products to the standard algorithm for   **505**
               two-digit by two-digit multiplication.

©2018 Great Minds®. eureka-math.org

S: 20 × 35.

T: Solve for 20 thirty-fives.

S: (Solve.)

S: 700. It's the same!

T: (Draw an area model to show two partial products.) Say an addition sentence for the sum of the two parts.

S: 210 + 700 = 910. That's the same answer as when we added the four partial products.

T: We can solve by finding two partial products instead of four!
Problem 2: Solve 43 × 67 using four partial products and two partial products.

T: Work with a partner to draw and label an area model for 43 × 67 and solve.

T: Draw arrows to show how the parts of the area model relate to the partial products.

T: Draw and label another area model, as we did in Problem 1, which shows how we can combine the rectangles in the top portion and the rectangles in the bottom portion. (Guide students as they draw and label.) What expressions do the rectangles represent? Write the expressions in the rectangles. Solve for each expression.
S: (3 × 67) and (40 × 67). 3 sixty-sevens is 201. 40 sixty-sevens is 2,680.

T: Write the two partial products within their corresponding rectangles. Write 43 × 67 vertically, and then write the partial products. Draw arrows to show how the parts of the area model relate to the partial products. (Guide students as they make the connections.)

T: What is the sum of the two partial products?

S: 201 + 2,680 = 2,881. Again, it's the same as when we solved using four partial products.

T: We found the value of 3 sixty-sevens and then added the value of 40 sixty-sevens.

NOTES ON MULTIPLE MEANS OF REPRESENTATION:

If students are not ready to complete the transition away from the area model, encourage them to quickly sketch an area model so that they can visually see the partial products.

Lesson 37:   Transition from four partial products to the standard algorithm for two-digit by two-digit multiplication.

©2018 Great Minds®. eureka-math.org

EUREKA MATH

Problem 3: Solve 24 × 36 using two partial products and an area model.

- T: Write 24 × 36 vertically, and then represent it by drawing an area model. Discuss with a partner how to solve with two partial products.
- S: One rectangle represents 4 thirty-sixes, and the other represents 20 thirty-sixes. We can find the area of each rectangle and then find their sum.
- T: (Draw arrows next to where the partial products will be written.) Let's write the expressions for each partial product. (Write expressions next to where the partial products will be written as students do the same.) Find each partial product, and then determine their sum.
- S: 144 + 720 = 864.
- T: Look at the area model that you drew. Connect the partial products in the area model to the partial products in the vertical expression. Close your eyes and create a picture in your mind of how the partial products relate to the area model.
Problem 4: Solve 37 × 49 using two partial products without an area model.

- T: Write 37 × 49 vertically on your personal white board. How can we solve?
- S: I can think about what the area model would look like. I know that the expressions for the partial products are 7 × 49 and 30 × 49.
- T: Find each partial product. (Allow time for students to calculate answers.)
- S: 7 forty-nines is 343; 30 forty-nines is 1,470.
- T: How did you solve for the partial products?
- S: I multiplied the numbers off to the side because I know how to multiply one-digit numbers by two-digit numbers and multiples of 10 by two-digit numbers.
- T: Write the partial products beneath the expression. What is their sum?
- S: 343 + 1,470 = 1,813. → 37 × 49 = 1,813.

> **NOTES ON MULTIPLE MEANS OF ACTION AND EXPRESSION:**
>
> Lead students through steps that help them to create a picture in their mind of the area model. Ask questions such as the following to support the visualization.
> - Can you see the rectangle?
> - How many parts does it have?
> - What are the two lengths of the vertical side?
> - What is the length of the horizontal side?
> - What expressions give us the area of each smaller rectangle?
> - Look at the vertical expression that we have written. Do you see the expressions for the area of each smaller rectangle?

Problem Set (10 minutes)

Students should do their personal best to complete the Problem Set within the allotted 10 minutes. For some classes, it may be appropriate to modify the assignment by specifying which problems they work on first. Some problems do not specify a method for solving. Students should solve these problems using the RDW approach used for Application Problems.

Student Debrief (10 minutes)

Lesson Objective: Transition from four partial products to the standard algorithm for two-digit by two-digit multiplication.

The Student Debrief is intended to invite reflection and active processing of the total lesson experience.

Invite students to review their solutions for the Problem Set. They should check work by comparing answers with a partner before going over answers as a class. Look for misconceptions or misunderstandings that can be addressed in the Debrief. Guide students in a conversation to debrief the Problem Set and process the lesson.

Any combination of the questions below may be used to lead the discussion.

- Did you record the 15 or 57 as the width of the rectangle in Problem 3? Does it matter the order? Which number as the width is easiest for you to solve the rest of the problem? Explain.
- Imagine the area models for Problems 4(c) and (d). Notice how the rectangle in Problem 4(d) is half as wide and double the length of the rectangle in Problem 4(c). What might the areas look like? Why does that result in the same product?
- How does the shading on the area models help you understand the movement from four partial products to two partial products?
- Why would we want to represent the area model using two partial products instead of four?
- How did the Application Problem connect to today's lesson?

Lesson 37: Transition from four partial products to the standard algorithm for two-digit by two-digit multiplication.

EUREKA MATH

Lesson 38

Objective: Transition from four partial products to the standard algorithm for two-digit by two-digit multiplication.

Suggested Lesson Structure

- ■ Fluency Practice   (10 minutes)
- ■ Application Problem   (5 minutes)
- ■ Concept Development   (35 minutes)
- ■ Student Debrief   (10 minutes)

  Total Time   **(60 minutes)**

Fluency Practice (10 minutes)

- ▪ Decompose 90 and 180   (4 minutes)
- ▪ Multiply by Multiples of 10 Written Vertically   (6 minutes)

Decompose 90 and 180 (4 minutes)

Materials: (S) Personal white board

Note: This fluency activity prepares students for composing and decomposing benchmark angles of 90 and 180 degrees in Module 4.

  T: (Project a number bond with a whole of 90 and a part of 10.) On your personal white boards, fill in the unknown part in the number bond.

  S: (Fill in 80.)

  T: (Write 90 – 10 = ____.) Say the subtraction sentence.

  S: 90 – 10 = 80.

Continue decomposing 90, taking away the following possible suggested parts:
20, 30, 85, 40, 45, 25, 35, and 15.

Repeat the process, taking away the following possible suggested parts from 180:
10, 100, 90, 70, 150, 60, 5, 15, 75, 65, and 45.

EUREKA MATH™   **Lesson 38:**   Transition from four partial products to the standard algorithm for   **515**
                                        two-digit by two-digit multiplication.

©2018 Great Minds®. eureka-math.org

Multiply by Multiples of 10 Written Vertically (6 minutes)

Materials: (S) Personal white board

Note: This fluency activity reviews Lesson 35's content.

- T: Solve 20 × 67 vertically as you say the unit form: 2 tens times 7 ones plus 2 tens times 6 tens. You have one minute. If you finish early, go on to 20 × 78.
- T: (Allow students a minute to work.) 2 tens times 7 ones is…?
- S: 14 tens. (Write 140.)
- T: 2 tens times 6 tens is…?
- S: 12 hundreds. (Write 1,200.)
- T: The sum of 140 and 1,200 is…?
- S: 1,340.
- T: 20 groups of 67 is…?
- S: 1,340.

Continue with the following possible sequence: 20 × 78, 30 × 45, 30 × 67, and 40 × 75.

Application Problem (5 minutes)

Sandy's garden has 42 plants in each row. She has 2 rows of yellow corn and 20 rows of white corn.

Draw an area model (representing two partial products) to show how much yellow corn and white corn has been planted in the garden.

Note: This problem revisits the area model that focuses on two partial products in preparation for work with the standard algorithm. The area model used in the Application Problem is used in Problem 1 of the Concept Development.

> **NOTES ON MULTIPLE MEANS OF ACTION AND EXPRESSION:**
>
> When multiplying two-digit by two-digit numbers, use place value cards (e.g., Hide Zero cards) to represent the factors. The cards provide a concrete representation of the place value of each digit within the factors and are another way to promote understanding of the multiplication algorithm.
>
>
Concept Development (35 minutes)

Materials: (S) Personal white boards

Problem 1: Represent 22 × 42 with the distributive property, and connect the two partial products to the standard algorithm.

- T: Look at the model you drew in the Application Problem. We found the total for 22 rows of 42, or 22 forty-twos. What multiplication expression is that?
- S: 22 × 42.

EUREKA MATH™

T: Write 22 × 42 vertically. 22 units of 42.

T: Which expression represents the first of the two partial products that we recorded?

S: 2 × 42.

T: 2 ones times 2 ones equals…?

S: 4 ones.

T: Let's record the 4 ones in the ones place.

T: 2 ones times 4 tens equals…?

S: 8 tens.

T: Let's record the 8 tens in the tens place. What's the first partial product?

S: 84.

T: Draw an arrow to the area model to show where the partial product is represented.

T: In unit form, which expression represents the second of the two partial products that we recorded?

S: 2 tens × 4 tens 2 ones.

T: Let's solve.

T: What is 2 tens times 2 ones?

S: 4 tens.

T: Let's record 4 tens as 40 to start the second partial product. (Model.)

T: 2 tens times 4 tens equals how many hundreds?

S: 8 hundreds.

T: Record 8 hundreds in the hundreds place. Draw an arrow to the area model to show where the partial product is represented.

T: What's the second partial product?

S: 840.

T: Find the sum of the two partial products.

T: What is 22 × 42? Say the equation.

S: 22 × 42 = 924.
Problem 2: Represent 29 × 62 involving a regrouping in the first partial product.

T: We want to find the value of 29 sixty-twos using the algorithm.

T: What multiplication expression will I use?

S: 29 × 62.

T: First, let's find the value of 9 sixty-twos.

T: 9 ones times 2 ones is…?

S: 18 ones.

T: Let's record the new groups below just as we have done in the past. (Write the 1 on the line under the tens place first and the 8 in the ones place second.)

T: 9 ones times 6 tens is…?

EUREKA
MATH™

Lesson 38:   Transition from four partial products to the standard algorithm for
two-digit by two-digit multiplication.

517

©2018 Great Minds®. eureka-math.org

S: 54 tens.

T: (Point to the regrouped ten.) 54 tens plus 1 ten is...?

S: 55 tens. Now we need to cross off the 1 ten that we regrouped.

T: What is 9 × 62?

S: 558.

T: Now let's find the value of the second partial product, 20 sixty-twos.

T: 2 tens times 2 ones is...?

S: 4 tens.

T: Record the 4 tens as 40 ones. 2 tens times 6 tens is...?

S: 12 hundreds.

T: Record 12 hundreds in the second partial product. What is our second partial product?

S: 1,240.

T: What is the sum of our partial products?

S: 1,798.

T: What is 29 × 62? Say the complete equation.

S: 29 × 62 = 1,798.

T: Yes, 9 sixty-twos plus 20 sixty-twos is 29 sixty-twos. The product is 1,798.

Problem 3: Solve 46 x 63 involving a regrouping in the second partial product.

T: Let's find the value of 46 sixty-threes. Write the multiplication expression.

S: (Write 46 × 63.)

T: Which partial product do we find first?

S: 6 × 63.

T: 6 ones times 3 ones is...?

S: 18 ones.

T: Let's record. (Write the 1 on the line under the tens place first and the 8 in the ones place second.)

T: What do we multiply next?

S: 6 ones times 6 tens. That's 36 tens. When I add the 1 ten, I get 37 tens.

T: Record 37 tens. Did you remember to cross off the 1 ten? The value of 6 sixty-threes is...?

S: 378.

T: Now, let's find the value of 40 sixty-threes. What do we do first?

> **NOTES ON MULTIPLE MEANS OF REPRESENTATION:**
>
> Use graph paper or a template that allows for wide rows to show how the regrouping is within the same partial product and how it relates to the value of that row. Students can then see the regrouped number is intentionally placed in the next column within the same partial product. Relate back to the place value disk model of representation as needed.

EUREKA MATH™

S: 4 tens times 3 ones equals 12 tens.

T: 12 tens is 1 hundred 2 tens. Record the 1 hundred in the hundreds column of the second partial product. Record 2 tens as 20.

T: What do we multiply next?

S: 4 tens times 6 tens. That's 24 hundreds.

T: The total number of hundreds is…?

S: We had 24 hundreds, plus one more hundred is 25 hundreds.

T: Cross out the 1 hundred and record 25 hundreds.

T: What is the second partial product?

S: 2,520.

T: Turn and tell your partner what the next step is.

S: We add the partial products.

T: What is 46 sixty-threes?

S: $46 \times 63 = 2{,}898$.

Problem Set (10 minutes)

Students should do their personal best to complete the Problem Set within the allotted 10 minutes. For some classes, it may be appropriate to modify the assignment by specifying which problems they work on first. Some problems do not specify a method for solving. Students should solve these problems using the RDW approach used for Application Problems.

Student Debrief (10 minutes)

Lesson Objective: Transition from four partial products to the standard algorithm for two-digit by two-digit multiplication.

The Student Debrief is intended to invite reflection and active processing of the total lesson experience.

Invite students to review their solutions for the Problem Set. They should check work by comparing answers with a partner before going over answers as a class. Look for misconceptions or misunderstandings that can be addressed in the Debrief. Guide students in a conversation to debrief the Problem Set and process the lesson.

Any combination of the questions below may be used to lead the discussion.

▪   What is the relationship between the product for Problem 1 and Problem 2 of the Problem Set?

EUREKA MATH™   Lesson 38:   Transition from four partial products to the standard algorithm for   519
                    two-digit by two-digit multiplication.

©2018 Great Minds®. eureka-math.org

- How does the structure of determining the answers to Problems 1 and 2 help you to solve Problem 3?

- How is recording multiplication using the multiplication algorithm the same as when we solved using two partial products? How is it different?

- How did your understanding of two partial products help you to learn the multiplication algorithm?

- How is the multiplication algorithm similar to the algorithm for addition? How is it different?

- What might be an advantage of using the multiplication algorithm to multiply?

- Explain to your partner how to multiply using the multiplication algorithm.

- What new (or significant) math vocabulary did we use today to communicate precisely?

- How did the Application Problem connect to today's lesson?

Exit Ticket (3 minutes)

After the Student Debrief, instruct students to complete the Exit Ticket. A review of their work will help with assessing students' understanding of the concepts that were presented in today's lesson and planning more effectively for future lessons. The questions may be read aloud to the students.

Name _____   Date _____

1. Express 23 × 54 as two partial products using the distributive property. Solve.

MATH™

Solve using a model or equation. Show your work, and write your answer as a statement.

6. A new grocery store is opening next week.

   a. The store's rectangular floor is 42 meters long and 39 meters wide. How many square meters of flooring do they need? Use estimation to assess the reasonableness of your answer.

   b. The store ordered small posters and large posters to promote their opening. 12 times as many small posters were ordered as large posters. If there were 48 large posters, how many more small posters were ordered than large posters?

c. Uniforms are sold in packages of 8. The store's 127 employees will each be given 3 uniforms. How many packages will the store need to order?

d. There are three numbers for the combination to the store's safe. The first number is 17. The other two numbers can be multiplied together to give a product of 28. What are all of the possibilities for the other two numbers? Write your answers as multiplication equations, and then write all of the possible combinations to the safe.

EUREKA
MATH™

End-of–Module Assessment Task
Standards Addressed

Topics A–H

Use the four operations with whole numbers to solve problems.

- Interpret a multiplication equation as a comparison, e.g., interpret $35 = 5 \times 7$ as a statement that 35 is 5 times as many as 7 and 7 times as many as 5. Represent verbal statements of multiplicative comparisons as multiplication equations.

- Multiply or divide to solve word problems involving multiplicative comparison, e.g., by using drawings and equations with a symbol for the unknown number to represent the problem, distinguishing multiplicative comparison from additive comparison.

- Solve multistep word problems posed with whole numbers and having whole-number answers using the four operations, including problems in which remainders must be interpreted. Represent these problems using equations with a letter standing for the unknown quantity. Assess the reasonableness of answers using mental computation and estimation strategies including rounding.

Gain familiarity with factors and multiples.

- Find all factor pairs for a whole number in the range 1–100. Recognize that a whole number is a multiple of each of its factors. Determine whether a given whole number in the range 1–100 is a multiple of a given one-digit number. Determine whether a given whole number in the range 1–100 is prime or composite.

Use place value understanding and properties of operations to perform multi-digit arithmetic.

- Multiply a whole number of up to four digits by a one-digit whole number, and multiply two two-digit numbers, using strategies based on place value and the properties of operations. Illustrate and explain the calculation by using equations, rectangular arrays, and/or area models.

- Find whole-number quotients and remainders with up to four-digit dividends and one-digit divisors, using strategies based on place value, the properties of operations, and/or the relationship between multiplication and division. Illustrate and explain the calculation by using equations, rectangular arrays, and/or area models.

Solve problems involving measurement and conversion of measurements from a larger unit to a smaller unit.

- Apply the area and perimeter formulas for rectangles in real world and mathematical problems. *For example, find the width of a rectangular room given the area of the flooring and the length, by viewing the area formula as a multiplication equation with an unknown factor.*

Evaluating Student Learning Outcomes

A Progression Toward Mastery is provided to describe steps that illuminate the gradually increasing understandings that students develop *on their way to proficiency.* In this chart, this progress is presented from left (Step 1) to right (Step 4). The learning goal for students is to achieve Step 4 mastery. These steps are meant to help teachers and students identify and celebrate what the students CAN do now and what they need to work on next.

A Progression Toward Mastery				
Assessment Task Item	**STEP 1** **Little evidence of reasoning without a correct answer.** (1 Point)	**STEP 2** **Evidence of some reasoning without a correct answer.** (2 Points)	**STEP 3** **Evidence of some reasoning with a correct answer or evidence of solid reasoning with an incorrect answer.** (3 Points)	**STEP 4** **Evidence of solid reasoning with a correct answer.** (4 Points)
1	The student answers incorrectly with a number that is not a multiple of 7.	The student answers incorrectly with a number that is a multiple of 7 but greater than 60.	The student answers with a multiple of 7 that is less than 60 but not 56.	The student correctly answers: The greatest multiple of 7 that is less than 60 is 56.
2	The student is unable to complete the majority of Parts (a)–(e).	The student correctly answers prime or composite for three parts and misses more than a total of three factors.	The student correctly answers prime or composite for four of the five parts and misses three or fewer factors.	The student correctly answers: a. Prime; 1, 3 b. Composite; 1, 2, 3, 6 c. Composite; 1, 3, 5, 15 d. Composite; 1, 2, 3, 4, 6, 8, 12, 24 e. Prime; 1, 29

EUREKA MATH™

A Progression Toward Mastery

3	The student incorrectly answers both parts and shows no reasoning.	The student correctly answers one part and shows little reasoning.	The student answers one part correctly but shows solid reasoning in both problems, or the student shows some reasoning with correct answers for both parts.	The student correctly answers using any place value strategy: a. 400 b. Each teacher received 72 pencils.
4	The student incorrectly represents division using place value disks and incorrectly solves numerically.	The student incorrectly solves the numeric equation but shows some understanding of the place value chart and use of the algorithm.	The student decomposes incorrectly in one place value or does not include the remainder.	The student correctly decomposes and divides using the place value disks and provides a numerical answer of 142 with a remainder of 1.
5	The student answers fewer than two parts correctly, showing little to no evidence of place value strategies.	The student correctly solves two parts, showing little evidence of place value strategies.	The student correctly solves three parts with understanding of place value strategies, or the student correctly solves all four parts but does not show solid evidence of place value understanding.	The student solves all parts correctly using any place value strategy: a. 1,772 b. 761 with a remainder of 4 c. 1,624 d. 731
6	The student incorrectly answers two or more of the four parts, showing little to no reasoning.	The student correctly answers two of four parts, showing some reasoning.	The student answers all four parts correctly but shows little reasoning in Part (a), or the student answers three of four parts correctly showing solid reasoning and understanding mathematically.	The student correctly answers all four parts, showing solid evidence of place value understanding: a. 1,638 square meters of flooring (estimate 40 × 40 = 1,600 square m). It is a reasonable because the answer and estimate have a difference of only 38 square meters. b. 528 more small posters than large posters.

A Progression Toward Mastery

				c. 48 packages.
				d. Equations of
				1 × 28 = 28
				28 × 1 = 28
				2 × 14 = 28
				14 × 2 = 28
				4 × 7 = 28
				7 × 4 = 28
				Combinations of
				17, 1, 28

EUREKA MATH™

Directions: Solve using a model or equation. Show your work and write your answer as a statement.

6. A new grocery store is opening next week.

a. The store's rectangular floor is 42 meters long and 39 meters wide. How many square meters of flooring do they need? Use estimation to assess the reasonableness of your answer.
$$42 \times 39 \approx 40 \times 40$$
$$40 \times 40 = 1600$$

They need 1,638 square meters of flooring. My answer is reasonable because it is close to my estimate of 1,600 square meters.

b. The store ordered small posters and large posters to promote their opening. 12 times as many small posters were ordered as large posters. If there were 48 large posters, how many more small posters were ordered than large posters?

P = 528

528 more small posters were ordered than large posters.

EUREKA MATH™

c. Uniforms are sold in packages of 8. The store's 127 employees will each be given 3 uniforms. How many packages will the store need to order?

127×3
$$
\begin{array}{r}
127 \\
\times \; 3 \\
\hline
381
\end{array}
$$

$$
\begin{array}{r}
47 \; R5 \\
8\overline{)381} \\
-32 \\
\hline
61 \\
-56 \\
\hline
5
\end{array}
$$

$$
\begin{array}{r}
\checkmark \; 47 \\
\times \; 8 \\
\hline
376
\end{array}
$$

$376 + 5 = 381$

The store needs to order 48 packages. If they order 47 packages, only 376 uniforms will come and they will need 5 more uniforms.

d. There are 3 numbers for the combination to the store's safe. The first number is 17. The other 2 numbers can be multiplied together to give a product of 28. What are all of the possibilities for the other two numbers? Write your answers as multiplication equations, and then write all of the possible combinations to the safe.

$28 = 1 \times 28$
$28 = 28 \times 1$
$28 = 2 \times 14$
$28 = 14 \times 2$
$28 = 4 \times 7$
$28 = 7 \times 4$

The combination possibilities are:

17, 1, 28
17, 28, 1
17, 2, 14
17, 14, 2
17, 4, 7
17, 7, 4

Lesson 20

Problem Set

1. a. $72 \div 4 = 18$

    b.   Whole: 72; parts: 40 and 32; 40, 4, 32, 4, 10, 8, 18

2. 15; whole: 45; parts: 30 and 15; $(30 \div 3) + (15 \div 3) = 10 + 5 = 15$; area model and number bond drawn

3. 16; whole: 64; parts: 40 and 24; area model and number bond drawn; solved with distributive property or standard algorithm

4. 23; solved with area model; explanations will vary.

5. 12; solved with area model and standard algorithm

Exit Ticket

1. $72 \div 3 = 24$

2. 14; solved with area model, number bond, and written method

Homework

1. a. $54 \div 3 = 18$

    b.   Whole: 54; parts: 30 and 24; 30, 3, 24, 3, 10, 8, 18

2. 14; whole: 42; parts: 30 and 12; $(30 \div 3) + (12 \div 3) = 10 + 4 = 14$; area model and number bond drawn

3. 15; whole: 60; part: 40; part: 20; area model and number bond drawn; solved with distributive property or standard algorithm

4. 18; solved with area model; explanations will vary.

5. 16; solved with area model and standard algorithm

Module 3:   Multi-Digit Multiplication and Division

EUREKA MATH™

Problem Set

1. 18 R1; answer includes area model, long division, and distributive property

2. 25 R1; answer includes area model, long division, and distributive property

3. a. $53 \div 4 = 13$ R1

    b. $(40 \div 4) + (12 \div 4) = 10 + 3 = 13$

4. 16; answer includes area model and long division or distributive property

5. 16 R1; answer includes area model and long division or distributive property

6. 14; answer includes area model and long division or distributive property

7. 14 R2; answer includes area model and long division or distributive property

8. 13 R1; answer includes area model and long division or distributive property

9. 26 R1; answer includes area model and long division or distributive property

10. 12 groups; 1 student

Exit Ticket

1. $59 \div 2 = 29$ R1

2. 23 R1; answer includes area model, long division, and distributive property

Homework

1. 17 R1; answer includes area model, long division, and distributive property

2. 26 R1; answer includes area model, long division, and distributive property

3. a. $98 \div 4 = 24$ R2

    b. $(40 \div 4) + (40 \div 4) + (16 \div 4) = 10 + 10 + 4 = 24$

4. 14; answer includes area model and long division or distributive property

5. 14 R1; answer includes area model and long division or distributive property

6. 13; answer includes area model and long division or distributive property

7. 13 R2; answer includes area model and long division or distributive property

8. 12 R1; answer includes area model and long division or distributive property

9. 24 R1; answer includes area model and long division or distributive property

10. 24 lunch trays; 1 lunch tray

Lesson 22

Problem Set

1. a. Answer provided

   b. $1 \times 6 = 6$, $2 \times 3 = 6$; 1, 2, 3, 6; C

   c. $1 \times 7 = 7$; 1, 7; P

   d. $1 \times 9 = 9$, $3 \times 3 = 9$; 1, 3, 9; C

   e. $1 \times 12 = 12$, $2 \times 6 = 12$; $3 \times 4 = 12$; 1, 2, 3, 4, 6, 12; C

   f. $1 \times 13 = 13$; 1, 13; P

   g. $1 \times 15 = 15$, $3 \times 5 = 15$; 1, 3, 5, 15; C

   h. $1 \times 16 = 16$, $2 \times 8 = 16$, $4 \times 4 = 16$; 1, 2, 4, 8, 16; C

   i. $1 \times 18 = 18$, $2 \times 9 = 18$, $3 \times 6 = 18$; 1, 2, 3, 6, 9, 18; C

   j. $1 \times 19 = 19$; 1, 19; P

   k. $1 \times 21 = 21$; $3 \times 7 = 21$; 1, 3, 7, 21; C

   l. $1 \times 24 = 24$, $2 \times 12 = 24$, $3 \times 8 = 24$, $4 \times 6 = 24$; 1, 2, 3, 4, 6, 8, 12, 24; C

2. For 25: (1, 25); (5, 5); composite; more than 2 factors

   For 28: (1, 28); (2, 14); (4, 7); composite; more than 2 factors

   For 29: (1, 29); prime; only 2 factors

3. a. 2, 3, 5, 7, 11, 13, 17, 19

   b. 2 is a prime and even number.

4. Incorrect; 3 is not a factor of 28.

Exit Ticket

   a. $1 \times 9 = 9$, $3 \times 3 = 9$; 1, 3, 9; C

   b. $1 \times 12 = 12$, $2 \times 6 = 12$; $3 \times 4 = 12$; 1, 2, 3, 4, 6, 12; C

   c. $1 \times 19 = 19$; 1, 19; P

EUREKA
MATH™

Homework

1. a. Answer provided

    b. $1 \times 10 = 10$, $2 \times 5 = 10$; 1,2, 5, 10; C

    c. $1 \times 11 = 11$; 1, 11; P

    d. $1 \times 14 = 14$, $2 \times 7 = 14$; 1, 2, 7, 14; C

    e. $1 \times 17 = 17$; 1, 17; P

    f. $1 \times 20 = 20$, $2 \times 10 = 20$, $4 \times 5 = 20$; 1, 2, 4, 5, 10, 20; C

    g. $1 \times 22 = 22$, $2 \times 11 = 22$; 1, 2, 11, 22; C

    h. $1 \times 23 = 23$; 1, 23; P

    i. $1 \times 25 = 25$, $5 \times 5 = 25$; 1, 5, 25; C

    j. $1 \times 26 = 26$; $2 \times 13 = 26$; 1, 2, 13, 26; C

    k. $1 \times 27 = 27$, $3 \times 9 = 27$; 1, 3, 9, 27; C

    l. $1 \times 28 = 28$, $2 \times 14 = 28$, $4 \times 7 = 28$; 1, 2, 4, 7, 14, 28; C

2. For 19: (1, 19); prime; only 2 factors

    For 21: (1, 21); (3, 7); composite; more than 2 factors

    For 24: (1, 24); (2, 12); (3, 8); (4, 6); composite; more than 2 factors

3. a. 1, 3, 5, 7, 9, 11, 13, 15, 17, 19

    b. 9 and 15 are odd and composite

4. Correct; 3 is a factor of 27

Lesson 23

Problem Set

1. Explanations may vary.

   a. Yes

   b. No

   c. Yes

   d. Yes

   e. Yes

   f. Yes

   g. No

   h. No

2. a. 4; 4; 4; 24

   b. 9; 3; 3; 3; 36

3. $(4 \times 2) \times 7 = 4 \times (2 \times 7) = 4 \times 14 = 56$

   $(4 \times 2) \times 9 = 4 \times (2 \times 9) = 4 \times 18 = 72$

   $(4 \times 2) \times 10 = 4 \times (2 \times 10) = 4 \times 20 = 80$

4. Explanations may vary.

Exit Ticket

1. Explanations may vary.

   a. Yes

   b. No

   c. Yes

   d. Yes

2. Explanations may vary.

Homework

1. Explanations may vary.

   a. Yes

   b. No

   c. Yes

   d. Yes

   e. Yes

   f. Yes

   g. No

   h. No

2. a. 3; 3; 3; 4; 12

   b. 6; 2; 2; 2; 30

3. $(5 \times 2) \times 7 = 5 \times (2 \times 7) = 5 \times 14 = 70$

   $(5 \times 2) \times 8 = 5 \times (2 \times 8) = 5 \times 16 = 80$

   $(5 \times 2) \times 9 = 5 \times (2 \times 9) = 5 \times 18 = 90$

4. Explanations may vary.

EUREKA MATH™

Lesson 24

Problem Set

1. a. 100, 105, 110, 115, 120, 125, 130, 135,
      140, 145, 150, 155, 160, 165, 170, 175,
      180, 185, 190, 195, 200, 205, 210, etc.

   b. 20, 24, 28, 32, 36, 40, 44, 48, 52, 56, 60, 64,
      68, 72, 76, 80, 84, 88, 92, 96, 100, 104,
      108, 112, 116, 120, etc.

   c. 36, 42, 48, 54, 60, 66, 72, 78, 84, 90, 96,
      102, 108, 114, 120, 126, 132, 138, 144,
      150, 156, 162, 168, 174, 180, etc.

2. 1, 2, 3, 4, 6, 8, 12, 24

3. a. Yes; yes

   b. No; no

   c. Yes; yes

4. Yes; explanations will vary.

5. a. Multiples of 2 circled red; 0, 2, 4, 6, 8

   b. Multiples of 3 shaded green; answers will
      vary; sums are multiples of 3 or divisible by 3.

   c. Multiples of 5 circled blue; 0, 5

   d. Multiples of 10 crossed out; zero in the
      ones place

Exit Ticket

1. 55; 66; 77; 88; 99

2. 21, 35, 42, 49, 56, 63, 70

3. a. 1, 2, 3, 6, 9, 18

   b. 1, 2, 3, 6, 9, 18

   c. Yes; explanations will vary.

Homework

1. a. 75, 80, 85, 90, 95, 100, 105, 110, 115, 120, 125, 130, 135, 140, 145, 150, 155, 160, 165, 170, 175, 180, 185, etc.

    b. 40, 44, 48, 52, 56, 60, 64, 68, 72, 76, 80, 84, 88, 92, 96, 100, 104, 108, 112, 116, 120, 124, 128, 132, 136, 140, etc.

    c. 24, 30, 36, 42, 48, 54, 60, 66, 72, 78, 84, 90, 96, 102, 108, 114, 120, 126, 132, 138, 144, 150, etc.

2. 1, 2, 3, 5, 6, 10, 30

3. a. Yes; yes

    b. Yes; no

    c. No; no

4. No; explanations will vary.

5. a. Multiples of 6 underlined; 0, 2, 4, 6, 8

    b. Multiples of 4 identified; 2, 6

    c. 0, 4, 8; answers will vary.

    d. Multiples of 9 circled; sum is 9.

11.	30	22.	4	33.	700	44.	80

Problem Set

1.   78 tables; number of groups unknown

2.   473 books; group size unknown

3.   501 sacks; number of groups unknown

4.   1,920 cookies; group size unknown

5.   603 miles; group size unknown

Exit Ticket

1.   143 cars; group size unknown

2.   178 sacks; number of groups unknown

Homework

1.   125 mL; group size unknown

2.   206 baggies; number of groups unknown

3.   70 miles; group size unknown

4.   219 strips; number of groups unknown

5.   1,164 Groblarx fruits; group size unknown

Lesson 32

Problem Set

1.   31 seats

2.   8 bagels

3.   87 bags; 5 pieces of candy

4.   150 teams; 4 children

5.   1,014 kg; 5 kg

Exit Ticket

1.   121 students

2.   59 crayons

Homework

1.   48 guests

2.   500 pencils

3.   251 sacks

4.   36 muffins

5.   1,287 m

Lesson 33

Problem Set

1. a. $892 \div 4 = 223$

   b. Whole: 892; parts: 400, 400, 80, 12

   $(400 \div 4)+(400 \div 4)+(80 \div 4)+(12 \div 4)= 100 + 100 + 20 + 3 = 223$

2. a. 240; area model accurately drawn

   b. Answers will vary.

3. a. 258; area model accurately drawn

   b. Answers will vary.

   c. Algorithm accurately recorded

4. a. 792; area model accurately drawn

   b. Answers will vary.

   c. Algorithm accurately recorded

Exit Ticket

1. a. $747 \div 3 = 249$

   b. Whole: 747; parts: 600, 120, 27

   $(600 \div 3) + (120 \div 3) + (27 \div 3) = 200 + 40 + 9 = 249$

2. a. 684; area model accurately drawn

   b. Answers will vary.

   c. Algorithm accurately recorded

Module 3:   Multi-Digit Multiplication and Division

EUREKA
MATH™

Homework

1. a. $1,828 \div 4 = 457$

    b.   Whole: 1,828; parts: 1,600, 200, 28

      $(1,600 \div 4) + (200 \div 4) + (28 \div 4) = 400 + 50 + 7 = 457$

2. a.   204; area model accurately drawn

    b.   Answers will vary.

3. a.   183; area model accurately drawn

    b.   Answers will vary.

    c.   Algorithm accurately recorded

4. a.   1,381; area model accurately drawn

    b.   Answers will vary.

    c.   Algorithm accurately recorded

Lesson 34

Problem Set

1. Disks drawn accurately

   a. 3; 3; 720

   b. 43; 43; 1,720

   c. 10, 37; 37; 1,110

2. Disks drawn accurately

   a. 540

   b. 1,240

3. a. 1,360

   b. 2,150

4. a. 1,360

   b. 1,500

Exit Ticket

1. 2, 10, 41, 820

2. 1,920

Homework

1. Disks drawn accurately

   a. 2; 2; 680

   b. 34; 34; 1,020

   c. 10, 42; 42; 1,260

2. Disks drawn accurately

   a. 320

   b. 1,280

3. a. 630

   b. 2,520

4. a. 1,720

   b. 1,610

Module 3:   Multi-Digit Multiplication and Division

EUREKA
MATH™

Lesson 35

Problem Set

1. 40; 400; 440
2. 50; 2,000; 2,050
3. 180; 4,200; 4,380
4. Area model drawn; 2,560
5. Area model drawn; 3,780
6. 2,040
7. 2,040
8. 2,200
9. 4,400

Exit Ticket

1. 90; 2,700; 2,790
2. 240; 2,800; 3,040

Homework

1. 210; 300; 510;
2. 320; 2,000; 2,320
3. 400; 1,500; 1,900
4. Area model drawn; 1,140
5. Area model drawn; 880
6. 1,760
7. 2,640
8. 3,290
9. 5,200

Lesson 36

Problem Set

1. a. 4×2 , 4×10, 10×2, 10×10

    b. 2, 10, 2, 10

2. 308; area model and partial products accurately recorded

3. 800; area model and partial products accurately recorded

4. 1,470; area model and partial products accurately recorded

5. 462; partial products accurately recorded

6. 506; partial products accurately recorded

Exit Ticket

1. 1,118; area model and partial products accurately recorded

2. 935; area model and partial products accurately recorded

Homework

1. a. 3×2, 3×10, 10×2, 10×10

    b. 2, 10, 2, 10

2. 578; area model and partial products accurately recorded

3. 810; area model and partial products accurately recorded

4. 855; area model and partial products accurately recorded

5. 564; partial products accurately recorded

6. 2,139; partial products accurately recorded

7. 253; partial products accurately recorded

8. 506; partial products accurately recorded

Module 3:   Multi-Digit Multiplication and Division

EUREKA
MATH™

Lesson 37

Problem Set

1. 4 × 2, 4 × 10, 10 × 2, 10 × 10; 8, 40, 20, 100, 168; 4 × 12, 10 × 12; 48, 120, 168

2. 2 × 3, 2 × 40, 30 × 3, 30 × 40; 6, 80, 90, 1,200, 1,376; 2 × 43, 30 × 43; 86, 1,290, 1,376

3. 7 × 15, 50 × 15; 105, 750, 855

4. a. 150, 6, 25; 1,000, 40, 25; 1,150

    b. 36, 2, 18; 1,080, 60, 18; 1,116

    c. 234, 1,560, 1,794

    d. 234, 1,560, 1,794

Exit Ticket

1. 3 × 2, 3 × 20, 40 × 2, 40 × 20; 6, 60, 80, 800, 946; 3 × 22, 40 × 22; 66, 880, 946

2. 5 × 64, 10 × 64; 320, 640, 960

Homework

1. 6 × 4, 6 × 30, 20 × 4, 20 × 30; 24, 180, 80, 600, 884; 6 × 34, 20 × 34; 204, 680, 884

2. 2 × 1, 2 × 40, 80 × 1, 80 × 40; 2, 80, 80, 3,200, 3,362; 2 × 41, 80 × 41; 82, 3,280, 3,362

3. 2 × 26, 50 × 26; 52, 1,300, 1,352

4. a. 204, 3, 68; 1,360, 20, 68; 1,564

    b. 147, 3, 49; 1,470, 30, 49; 1,617

    c. 80, 320, 400

    d. 54, 3,780, 3,834

Lesson 38

Problem Set

1. 3 × 54, 20 × 54; 3, 20; 162, 54; 1,080, 54; 1,242
2. 6 × 54, 40 × 54; 6, 40; 324, 6, 54; 2,160, 40, 54; 2,484
3. 5 × 47, 50 × 47; 5, 47, 50, 47; 235, 5, 47; 2,350, 50, 47; 2,585
4. 290, 5, 58; 2,320, 40, 58; 2,610
5. 410, 5, 82; 4,100, 50, 82; 4,510
6. 3,339
7. 6,132

Exit Ticket

1. 216, 3, 72; 2,880, 40, 72; 3,096
2. 1,855

Homework

1. 6 × 43, 20 × 43; 6, 20; 258, 43; 860, 43; 1,118
2. 7 × 63, 40 × 63; 7, 40; 441, 7, 63; 2,520, 40, 63; 2,961
