Jumpers

The setup of the configuration jumpers on the SHB is described below. An asterisk (*) indicates the default value of each jumper.

NOTE: Jumper JU1 is a dual-row, 14-pin jumper. Each position controls the operation of a specific SHB implementation

NOTE: For the three-position JU12 jumper, "RIGHT" is toward the I/O bracket side of the board; "LEFT" is toward the header connector P14.

JU1 Pins CMOS Clear
1-2 and Install on pins 1 and 2 to operate *
3-4 Install on pins 3 and 4 to clear.

Note: To clear the CMOS, power down the system and install the JU1 jumper on pins 3 and 4. Wait for at least two seconds, move the jumper back to pins 1 and 2 and turn the power on. Clearing CMOS on the TKL8255 will not result in a checksum error on the following boot. If you want to change a BIOS setting, you must press *DEL* or the *F2* key during POST to enter BIOS setup after clearing CMOS.

JU1 Pins Flash Descriptor Security Override
5-6 No jumper installed on pins 5 and 6 is the normal SHB operating mode.*
 Install jumper on pins 5 and 6 at power-on to override SPI-based write policies to unconditionally allow SPI updates.

JU1 Pins Clear Password
7-8 No jumper installed on pins 7 and 8 is the normal SHB operating mode.*
 Install jumper on pins 7 and 8 for one power-up cycle to reset the password to the default (null password).

JU1 Pins BIOS Recovery
9-10 No jumper installed on pins 9 and 10 is the normal SHB operating mode.*
 Install jumper on pins 9 and 10 to force a Top Block Swap (Alternate Boot Block).

JU1 Pins Management Engine (ME) Recovery
11-12 No jumper installed on pins 11 and 12 is the normal SHB operating mode.*
 Install a jumper on pins 11 and 12 at power-on to initiate ME recovery.

JU1 Pins XDP VCCST Override
13-14 No jumper installed on pins 13 and 14 is the normal SHB operating mode.*
 Installing a jumper on pins 13 and 14 supports XDP debugging in PCH Sleep States

JU2 Serial Port 1 Interface Configuration

JU2 uses five jumpers to allow serial port one to be configured as either a RS232 or a RS422/RS485 electrical interface. The jumper tables below illustrate the possible interface configurations for serial port one.

Notes:

- 1 – Shut between pins 9 and 10 can optionally be removed to unconditionally enable the Tx driver
- 2 – Shut between pins 9 and 10 can optionally be installed to unconditionally enable the Tx driver

Status LEDs

POST Code LEDs 1 - 8

As the POST (Power On Self-Test) routines are performed during boot-up, test codes are displayed on Port 80 POST Code LEDs 0, 1, 2, 3, 4, 5, 6 and 7. These LEDs are located on the top of the SHB, just above the board's SATA connectors and slightly toward the right. The POST Code LEDs are numbered from right (position 1 = LED1) to left (position 8 – LED8). Refer to the board layout diagram for the exact location of the POST code LEDs.

These POST codes may be helpful as a diagnostic tool. Specific test codes are listed in Appendix A - BIOS Messages section of the TKL8255 Technical Reference Manual. After a normal POST sequence, the LEDs are off (00h) indicating that the SHB's BIOS has passed control over to the operating system loader typically at interrupt INT19h. The chart is from Appendix A and can be used to interpret the LEDs into hexadecimal format during POST.

TKL8255 POST Code LEDs

P4A/P4B Ethernet LEDs

The I/O bracket houses the two RJ-45 network connectors for Ethernet LAN1 and LAN2. Each LAN interface connector has two LEDs that indicate activity status and Ethernet connection speed. Listed below are the possible LED conditions and status indications for each LAN connector:

LED/Connector	Description
Activity LED	This LED identifies the validity of a link on the specific interface. This is the upper LED on the LAN connector (i.e., toward the upper memory sockets).
Off	No valid link exists on this interface.
On (flashing)	Indicates network transmit or receive activity.
On (solid)	Indicates a valid link with no transmit or receive activity.
Speed LED	This multi-color LED identifies the connection speed of the SHB's P4A (LAN2) and P4B (LAN1) Ethernet interfaces. These are the lower LEDs on the dual LAN connector (i.e., toward the edge connectors).
Green	Indicates a valid link at 1000-Mb/s or 1Gb/s
Orange	Indicates a valid link at 100-Mb/s.
Off	Indicates a valid link at 10-Mb/s
RJ-45 Network Connectors	The RJ-45 network connector requires a Connectors category 5 (CAT5) unshielded twisted-pair (UTP) 2-pair cable for a 100-Mb/s network connection or a category 3 (CAT3) or higher UTP 2-pair cable for a 10-Mb/s network connection. A category 5e (CAT5e) or higher UTP 2-pair cable is recommended for a 1000-Mb/s (Gigabit) network connection.

LED11 - Backplane LAN LED

LED11 is located just above the right side of memory DIMM connector BK1B. A flashing LED11 indicates that network transmit and receive activity is occurring on the Ethernet LAN routed to the board's edge connector C / cable connector P18. This LAN provides a network interface for use on a compatible PICMG 1.3 backplane or over a cable.

LED13 – M.2 Activity LED

LED13 is located on the rear of the SHB, near the M.2 slot. A flashing LED13 indicates that I/O activity is occurring on the M.2 bus.

Connectors

NOTE:

A connector's square solder pad located on the bottom side of the PCB indicates pin 1.

P1 – DisplayPort Connector

BP LAN Cable Option
You may elect to create your own backplane LAN cable using the mating Molex connector information below. However, Trenton does offer a pre-made alternate backplane LAN cable with the mating Molex connector on one end and an RJ45 connector mounted into an I/O bracket on the other end. The Trenton part number for the alternate backplane LAN cable is: **193500001150-00**.
Note: Using the alternate backplane LAN cable effectively disconnects the LAN routing down to SHB edge connector C.

Note:

The mating Molex connector to use when making this alternative Ethernet cable has a Molex part number of 0513360810.

P38 –HD Audio Connector – Audio Connections

10 pin dual row header, Amp #5103308-1

PIN	SIGNAL	PIN	SIGNAL
1	Line In L	2	Line In R
3	GND	4	GND
5	Mic L	6	Mic R
7	GND	8	Sense_A
9	Line Out L	10	Line Out R

Notes:

1 – For applications requiring external 1/8" audio jacks, use Trenton part # 92-00677700. This board provides Line In, Line Out and Microphone connections from the onboard audio codec to an I/O plate.

P21 – Power Good LED

2 pin single row header, Amp #640456-2

PIN	SIGNAL
1	LED -
2	LED +

P27, P28, P31, P32, P35, P36 – SATA III 600 Ports

7 pin vertical locking connector, Molex #67800-8005

PIN	SIGNAL	PIN	SIGNAL
1	Gnd	5	RX-
2	TX+	6	RX+
3	TX-	7	Gnd
4	Gnd		

Notes:

- 1 – P27 = SATA0 interface, P28 = SATA1 interface,
- P31 = SATA2 interface, P32 = SATA3 interface,
- P35 = SATA4 interface, P36 = SATA5 interface,
- 2 – SATA connectors support standard SATA interface cables
- 3 – All SATA ports support SATA 3.0, SATA 2.0 and SATA 1.0 devices
- 4 – SATA 3.0 = 600MB/s data transfers, SATA 2.0 = 300MB/s data transfers and SATA 1.0 = 150MB/s data transfers

Memory

DDR4-2133 MEMORY

Trenton recommends unbuffered ECC PC4-17000 memory modules for use on the TKL8255. These unbuffered ECC registered (64-bit) DDR4 DIMMs must be PC4-17000 compliant. Unbuffered non-ECC DDR4 DIMMs are also supported on the TKL8255 SHB, but you cannot mix the two different memory types on the same board. The TKL8255 supports DDR4-1866 (PC4-14900) but optimal performance will not be achieved when these modules are utilized.

NOTES:

- To maximize memory interface speed, populate each memory channel with DDR4 DIMMs having the same interface speed. The SHB will support DIMMs with different speeds, but the memory channel interface will operate speed of the slowest DIMM.
- All memory modules must have gold contacts.
- All memory modules must have a 288-pin edge connector
- The SHB supports the following memory module memory latency timings:
 - 16-16-16 for 2133MHz DDR4 DIMMs
- Populate the memory sockets starting with memory channel A and begin by using the DIMM socket closest to the CPU first. Refer to the TKL8255 board layout drawing and populate the memory sockets using the population order illustrated in the chart below:

Population order[#]	CPU1
1	BK0A
2	BK1A
3	BK0B
4	BK1B

[#]Using a balanced memory population approach ensures maximum memory interface performance. A “balanced approach” means using an even number of DIMMs on the TKL8255 SHB whenever possible.

The memory DIMMs on the SHB connect directly to the CPU and at least one memory module must be installed on the board.
