HANDS-ON WORKPLACE
FIRE SAFETY TRAINING
Digital Fire, Live Fire & Clean Smoke

FLEXIBLE, REPEATABLE & COST-EFFECTIVE SOLUTIONS
At LION, we were convinced there was a more efficient and effective way to conduct fire extinguisher and safety training. We set out to create firefighter training and public education tools that alleviated the problems many had often experienced — setting up for training was costly and time consuming, and clean up was equally frustrating. We sought to make products that provided safe, hands-on training that resembled true-to-life situations as closely as possible.

At LION, we understand the importance of training and we are committed to properly preparing trainees for the real thing. We understand that realism during training exercises helps prepare trainees for when it really matters. Since the development of our first fire extinguisher training system, we have committed ourselves to utilizing smart technology and high quality, durable construction in product design and implementation. This passion has led us to develop the world’s most advanced fire safety and emergency training products.

LION is a culture of innovation with a commitment to enhancing first responder readiness. We are the world’s largest provider of fire and safety training tools and full-scale, multidisciplinary firefighter training complexes. We offer the most complete array of highly differentiated products and services to ensure that first responders are truly ready for action.

At LION, our primary driver is the passion our customers have for the critical roles they play in keeping citizens, workers, and firefighters safe through good training. We share this passion and have made it our mission to provide the best training tools possible to help our clients achieve their training goals.

LIVE FIRE EXTINGUISHER TRAINING SYSTEM

I.T.S. Xtreme Features

- **ENHANCED FLAME**
  The I.T.S. Xtreme training system generates larger, more intense flames, allowing trainees to really feel the heat, enhancing the realism of the training experience.

- **FLARE-UP FEATURE**
  The I.T.S. Xtreme training system has a flare-up button which can be pressed to reignite the flames at any time to further challenge trainees.

- **PROP ENABLED**
  Stainless steel props can be used with the I.T.S. Xtreme training system to simulate different fire scenarios. Optional trash can (Class A), stove top (Class B), paint locker (Class B) and motor (Class C) props are available.

I.T.S. Xtreme Advantages

- Safely train to OSHA requirements.
- Makes training easy and reduces costs significantly with the LION rechargeable training extinguishers.
- Grades users making it easy to monitor improvement and proficiency.

"Your products have enabled us to make substantial improvements to our campus fire safety training program."

JONATHAN STONE
Occupational Safety and Emergency Response Specialist // Michigan Technological University

I.T.S. Xtreme’s flame response system determines where the trainee is aiming and sweeping the SmartExtinguisher® and automatically varies the flames in response, providing a realistic and safe training experience. With intelligent props and multiple class of fire and difficulty settings, it is possible to provide countless training scenarios without the cost and cleanup associated with dry-chemical or CO₂ extinguishers. Propane-fed flames, intelligent props, as well as class of fire and difficulty level settings make I.T.S. Xtreme the world’s most advanced live fire extinguisher training system.

Class A, B or C fires can be selected at four different difficulty levels and props can be used to create realistic flame patterns, further enhancing the training experience.

"Trash Can Prop" "Motor Prop" "Paint Locker Prop"
Through the use of innovative, patented technology, the Intelligent Training System (I.T.S.) provides clean, safe and cost effective extinguisher training. The Intelligent Training System senses where the trainee aims and sweeps the SmartExtinguisher® laser-driven training extinguisher and varies the flames automatically, putting the fire out only when the proper technique is used. The SmartExtinguishers are recharged quickly and easily with only compressed air and water.

Intelligent Training System Features

> CLEAN
  Eliminates the discharge of any dry-chemical or CO₂.
  I.T.S. utilizes clean burning propane.

> SAFE
  Has sensors that automatically shut off the flames if the system is bumped, knocked or set up improperly.
  Flames go out instantly when the safety switch is released.

> EFFECTIVE
  Provides a realistic and engaging training experience.

Intelligent Training System Advantages

• Safely train to OSHA requirements.
• Makes training easy and reduces costs significantly with LION rechargeable training extinguishers.
• Grades users, making it easy to monitor improvement and proficiency. Trains more people more effectively in less time.
2.8 MILLION BTU AND SMART CONTROLS FOR ENHANCED FIRE TRAINING

Can your trainees handle the MAGNUM Fire Training System? With an output of 2.8 million BTU, your trainees feel the heat of MAGNUM’s intense flames for full scale hands-on training. MAGNUM is designed to handle a hose line, fire extinguisher, or virtually anything in your fire arsenal. Reinforced construction and rugged components allow you to run evolution after evolution of advanced fire extinguisher and hose line training. Training this intense has never been so simple. Built-in wheels and easy set up allow you to quickly create challenging training scenarios that are endlessly repeatable. Smart Controls shut down the propane and auto-ignition only if the fire is knocked out completely for accurate and comprehensive training. Stainless steel props can be used with MAGNUM to simulate different fire scenarios. Available props include a computer monitor prop, an electric motor prop and a trash can prop.

MAGNUM IS TOUGH ENOUGH TO HANDLE A HOSE LINE — SMART ENOUGH TO BE A LION PRODUCT

“I am pleased to say that it has delivered all that it was advertised to do… with the system nearly paying for itself the very first year!”

JAMIE DUKES
Senior Health and Safety Specialist // Valero Wilmington Refinery
BullsEye uses advanced laser technology to simulate the discharge of an actual extinguisher for a completely clean, safe and effective training experience. BullsEye senses where the user aims and sweeps a laser training extinguisher and automatically varies the LED driven digital flames in response. Your trainees learn how to effectively use a fire extinguisher in a real world environment. Training can now take place completely indoors — from the conference room to the production floor.

**BullsEye Features**

- **CLEAN**
  The BullsEye extinguisher uses a conical laser to replicate discharge rather than depending on an actual extinguisher. For training variation, the BullsEye system can also be used with the standard air/water SmartExtinguisher®.

- **SAFE**
  Relies on LED driven digital flames and a laser extinguisher for a completely safe training experience.

- **EFFECTIVE**
  Provides an engaging training experience. Hundreds of trainees can be trained in a single day without recharging any extinguishers. The BullsEye senses how far away the trainee is from the fire and what class of extinguisher they are using. The flames will only respond if the training is using the proper extinguisher and technique, allowing trainees to build muscle memory and all the skills necessary to stop incipient stage fires.

- **REALISTIC**
  BullsEye extinguishers have sound effects, a timed discharge and are weighted accordingly (5, 10 or 20 lb.) to closely simulate actual extinguishers. The self-generating flames mimic the sight and sound of real class A, B and C fires. Smoke generation is tied to the size of the fire to add even more realism to the scenario.

**BullsEye Advantages**

- Safely train to OSHA requirements.
- Eliminates time consuming set up and clean up.
- Allows training to take place entirely indoors, in the actual work environment.
- Grades users, making it easy to monitor improvement and proficiency. Training data can be easily exported to a USB for making certificates of completion and sharing records.

“We purchased the BullsEye Digital Fire Training System a few months ago and thoroughly believe it is one of the best investments for safety education that our company has made.”

**DYLAN HAYES**
Disaster Response Manager // Seattle Children’s Hospital
The R.A.C.E. Station expands your training beyond basic fire extinguisher training by incorporating all the elements of response to a fire. The R.A.C.E. Station includes a pull station, strobe light, smoke detector, annunciator, and an interactive 9-1-1 phone that allow your students to practice emergency response from start to finish. Reinforce the R.A.C.E. method (Rescue, Alert, Confine, Extinguish) and enable your students to make good decisions in an emergency based on their observations.

The R.A.C.E. Station recreates the stressful environment of an actual emergency. Trainees see simulated flames and the strobe light flash, hear the horn and fire sounds, and see the training smoke. Upon discovery of a simulated fire, trainees can put R.A.C.E. to the test by alerting with the emergency phone and/or pull station before attempting to extinguish the fire. When faced with a number of decisions to make before the fire grows out of control, R.A.C.E. training helps them respond quickly and accurately.

How it Works
The R.A.C.E. Station communicates wirelessly with the BullsEye™ Digital Fire Extinguisher Training System for a seamless training experience. Using the tablet control, the system records if the trainee responds using the correct R.A.C.E. method and how long it takes them to complete each step. Customize training scenarios to your location’s specific response plan. The R.A.C.E. Station can also be used with other LION training tools or as a standalone unit.

Training Opportunities
The R.A.C.E. Station is ideal for training anywhere a real fire emergency may occur. Challenge your trainees to locate the nearest extinguisher by placing the R.A.C.E. Station in that location. Train in a variety of places and easily change the location of the R.A.C.E. Station between evolutions. Teach students both how to respond to emergencies at work and at home by using the smoke detector and interactive emergency phone. When used in conjunction with the BullsEye, trainees can learn how to extinguish class A, B, and C fires using a wide range of extinguisher types.

Features/Benefits
- REALISTIC
  By including sound, smoke and training extinguishers, trainees will be exposed to the same conditions they will face in a real fire emergency.

- EFFECTIVE
  Hands-on training teaches muscle memory that will allow trainees to respond and make decisions quickly during a real emergency.

- COMPREHENSIVE
  Prepare your trainees with the tools they need to respond completely to an incipient stage fire from the moment they see it.

- TRANSPORTABLE
  The R.A.C.E. Station is lightweight and designed to be transported easily between training locations. Set up the R.A.C.E. Station in your training location where the alarm and extinguisher are actually located.
GasTrainer uses GasSource emitters and sensor technology to simulate chemical and explosive gas emission sources. The rugged handheld meter reads the electronic emissions of four different “gases”, with customizable alarm levels and intensity settings.

GasTrainer allows for comprehensive gas monitoring and response training for both fire service professionals and safety personnel. Simulated gas sources can be set up in work areas, chemical storage facilities, and near HVAC equipment where HazMat dangers can actually exist. Students learn how different gases behave, how to locate emission sources, and how to establish safety perimeters in the event of a hazardous situation. Using the hand-held Instructor Unit, a trainer can set alarm levels, adjust the gas being monitored and even manually increase or decrease gas readings to provide additional training challenges.

Set the scene with the HazMat Placard Kit which includes a full set of DOT placards and the NFPA diamond. Expand your training with the HazardTank™ and Leaking Propane Tank compressed gas cylinder props that create an electronic hissing noise when the valves are opened.

“Our tactical officers were able to see a real response to the entrance of a simulated hazardous material in a confined area. We could not simulate the concentration of such a hazard prior to our acquisition of this tool.”

RICHARD SHOAF, SR.
VP Operations // Safety Training and Consultations Int’l
Everyone that visits the trailer is amazed how realistic the fire and smoke simulations are. Adults love the fire extinguisher training in the kitchen and the children are learning so much about what to do if the woke up to their smoke detector sounding. I know that countless lives may be saved because of the use of this trailer.

Tiffany Bradbury
Fire Prevention Specialist // Roanoke Fire-EMS
The Jeff and Thomas Rescue Mannequins listen and call out for help.

The Rescue Mannequins are tough enough to take intense training and smart enough to interact with rescuers. Built with rugged, abrasion resistant materials, Jeff and Thomas can handle your toughest training requirements. Internal weighted padding and a flexible design provide uniform weight distribution and realistic feel. The interactive built-in VoiceBox gives your victim a voice and adds realism to the scenario. Record messages for continuous or sound activated playback. Jeff and Thomas can cough, call out for help, or direct rescuers to find additional victims.

Jeff
The Jeff Rescue Mannequin is constructed with crush-resistant materials, a rugged uni-shell covering and removable boots that can withstand a full range of intense training scenarios. Jeff’s internal weighted padding provides even weight distribution and feels like a real victim. Flexible joints enable a full range of mobility without pinch points. The programmable VoiceBox is located in the head for ease of access.

Thomas
Create victim removal scenarios with the Thomas Rescue Mannequin. Simulate a variety of serious bodily injuries including torso impalement or a severed arm or leg. The built-in VoiceBox gives your victim a voice and adds interactivity to the scenario.

“When minutes and even seconds count in a rescue, the LION rescue mannequin has to be the best piece of equipment to train with.”

DAN JAQUITH
Training and Safety Officer // Chatfield Fire Department
For training that's as real as it gets

ION Smoke Generators are known for withstanding the tough demands of firefighter training. Now, our range of generators has expanded to include a portable smoke generator that’s ideal for workplace safety training. The VICO Smoke Generator allows training officers to easily add realism to important fire safety drills.

Expand your training capabilities to include realistic evacuation training, as well as hazard recognition and response training. Because the VICO is cordless and battery operated, it’s ideal for training in locations where electrical power is not easily accessible or available.

The VICO produces smoke instantly at the touch of a button. Control the smoke density for light smoke during fire extinguisher training and denser smoke for more intense drills.

Training Opportunities

- Enhance fire response drills.
- Add visual cues to evacuation training.
- Use in conjunction with our BullsEye extinguisher training system for more realistic training.
- Add realism to hazmat training.
- Teach gas recognition and response.
- Conduct chemical spill and lab incident response training.
- Create realistic shelter in place drills and drills with non-ambulatory individuals in hospital and health care settings.

Features/Advantages

- PORTABLE
  The VICO weighs only 17 pounds, making it light enough for single hand operation.
- CORDLESS
  The VICO’s interchangeable battery allows instructors to add smoke to any training location where running power cords or a generator is inconvenient or impossible.
- ZERO HEAT-UP TIME
  The VICO instantly heats smoke liquid to the ideal temperature. Simply press the button for instant smoke.
- EASY OPERATION
  The VICO can be operated using just one button, and requires no configuration or programming. Users can customize smoke density and create smoke bursts or set the output to continuous run.
- LONG-LASTING BATTERY
  The VICO can be run continuously for 20 minutes and much longer when using smoke intermittently, producing the same high quality smoke during the first and last minutes of training. The battery can be easily changed for uninterrupted training.
Smoke Generators for workplace safety training

ION Smoke Generators use smart controls to continuously produce the best smoke possible for fire safety and evacuation training. Built on steel chassis with all metal structural components, these smoke generators are built to handle the toughest training demands and stand the test of time. LION Smoke Liquid has been developed to produce a dense, thick smoke with an extended hang-time. Advanced sensors and controls enable LION Smoke Generators to produce a continuous supply of smoke without recharging or reheating.

Whether you are doing fire safety drills, evacuation training, or a more advanced fire training, LION Smoke Generators don’t stop until your training is done.

Training Opportunities

- Provide employees with a realistic picture of how difficult evacuation during a fire can be.
- Add realism to your company’s fire safety training.
- Quickly fill buildings with dense smoke for large area fire brigade drills.
- Create a zero visibility environment in seconds for advanced fire and search & rescue training.

ETNA™ SMOKE GENERATOR

With built-in handles, steel chassis and rubberized feet, the ETNA Smoke Generator is portable enough to be easily moved, but tough enough to handle the demands of intense training. Smart controls and an integrated smoke liquid tank enable the ETNA Smoke Generator to produce smoke continuously for hours.

“This Smoke Generator keeps going and going! Once it has warmed up, it will generate smoke constantly until you turn it off — nice thick, dense, smoke that provides a realistic approach to fire training.”
REGINALD D. FREEMAN
MS, CFO Fire Chief / Lockheed Martin Aeronautics
ION’s Advanced Fire Training Systems are designed to provide realistic live fire training suited to your specific needs. By providing an array of interchangeable props that range from a small scale paint locker, stove fire or dumpster fire to a pressure vessel or vehicle fire training prop, we can help you meet your training goal, whatever it may be. All of our full-intensity training equipment is operated using the universal Pilot Module, meaning that you can easily customize and add to your selection of training props without excessive costs.

These interchangeable props offer full-intensity training scenarios with interactive features such as a functional burner valve on the Stove Fire Training Prop and operational lid on the Trash Bin Fire Training Prop. LION Modular Fire Training Props allow you to cost-effectively create additional scenarios to meet your specific training objectives.

LION Offers A Wide Range of Advanced Fire Training Props
Though they vary in size and scope, the Pilot Module is at the heart of each. The stainless steel Pilot Module acts as the brain of the system and connects to the Control Console, which allows the instructor to safely stop and start evolutions. The Pilot Module also houses the forced air pilot system, which guarantees reliable ignition, even under the most demanding circumstances.

A variety of props connect directly to the Pilot Module, including the Pressure Vessel, Split Pipe Flange, Stove, Dumpster, Helicopter and Aircraft Wing Fire Training Props. The Pilot Module makes it easy for instructors to add additional props to their training arsenal over time to meet their evolving training objectives.

Another component of the Advanced Fire Training Props is the Burn Tray. The Burn Tray, which allows for multiple burn zones and more intense flames, can be connected to the Pilot Module to expand training capabilities. Use the Burn Tray to simulate a fuel spill, or add larger props such as the Vehicle, Electric Motor and Pipe and Valve Assembly (Christmas Tree) Fire Training Props.

LION’s Advanced Fire Training Props are made of the most robust and rugged materials and are designed to stand up to the most intense training. Props are easily interchanged for versatile and diverse training opportunities. Additional props can be added to your collection at any time, allowing instructors to easily refresh their training capabilities.

**PRESSURE VESSEL FIRE TRAINING PROP**

The Pressure Vessel Fire Training Prop is a portable training tool with intense flames, real heat and smart controls. Train employees to reduce the chance of a BLEVE with the built-in multiple zone burner system. With a functioning vapor service valve, advanced fire safety training can include the practice of approaching the tank while shielded by hose lines to secure the fuel and extinguish the fire.

**SPLIT PIPE FLANGE FIRE TRAINING PROP**

The Split Pipe Flange Fire Training Prop challenges trainees to use the proper firefighting techniques when faced with a leaking combustible fluid or vapor fire situation. The fire source can be extinguished by applying the right amount and type of agent, by turning off the “valve”, or at any time by releasing the control dead man switch. The Split Pipe Flange Fire Training Prop is made of rugged stainless steel designed as a pipe, pipe joint and shut off valve.
