

Grow Efficiently

What does Grow Efficiently mean?

You've got big plans, so you need technology that can grow right along with your business. You can have it all – power, agility, and affordability. You can respond quickly to changing demands using a flexible platform that lets you choose the best path for your specific needs.

What can you imagine for your business?

Powering efficient growth

Today, small and midsize companies are able to access powerful capabilities that were once only available to large businesses. For example, always having access to the latest technology and innovation, quickly scaling apps and services up or down as business needs change, or dramatically increasing database performance so they can process orders faster.

Technology that works as hard as you do.

Microsoft is unique because it offers a flexible platform that lets you choose the path that's best for your business, whether on-premises or cloud. And because it's a familiar platform, change doesn't have to come with a lot of training costs or related business disruptions. Microsoft business solutions enable you to adapt and scale with less hassle, avoid up-front capital expenses, and get the tools you need to do what you do best.

How to grow efficiently

- 1 Get the right balance for your business**
Choose to run your applications in the way that best suits your organisation, whether on-site, in the cloud, or both, with Office 365, Windows Server 2012 R2, and Microsoft Azure.
- 2 Stay current and competitive**
Make sure you always have the latest innovation, features, and security with Windows 10 and Office 365 automatic updates.
- 3 Adjust to changing business needs**
Easily and quickly scale apps, services, and storage up or down as your business grows with Office 365 and Microsoft Azure.
- 4 Maximize your hardware investment**
Get one, familiar, powerful experience across PC's and devices with Windows 10. Give employees more device options across a variety of price points.
- 5 Reduce costs**
Reduce up-front infrastructure costs and pay only for what you use by hosting apps and email in the cloud with Office 365 and Microsoft Azure.
- 6 Manage mobile access more easily**
Enable easy, seamless access from personal and company-owned mobile devices with capabilities built in to Windows 10 and Office 365.
- 7 Improve database performance**
Make your apps run faster on existing server hardware with SQL Server 2014. Minimize business disruptions and associated costs while providing a better customer experience.
- 8 Get the most out of your servers**
Run more applications on the same server with virtualisation built into Windows Server 2012 R2, dramatically reducing your server footprint while processing more data faster than ever before.

“As we welcome new franchise partners, it’s easy to fold them into Office 365 and get them up and running right away.”

– Tom Boyle, Director of IT
Sky Zone
