

Managing a new construction project requires planning, organization and a large dedicated team that all has a common goal. CME Corp (CME) is a committed member of your project team. CME assists and supports your team in many of the new construction phases.

## Budgeting

CME can provide a considerable amount of the FF&E required for a new healthcare facility. We can construct a comprehensive product and logistics quote.

# Choosing and Ordering the Right Equipment

Making an important decision on your new equipment can require more than a quote; we make sure you get everything you need to make that informed choice.

### Receiving and Warehousing

CME realizes that secure storage space and resources are at a premium in any new construction project. We have over 30 service centers nationwide to serve you.

## **Product Tracking**

A new project can include products from over 200 manufacturers. CME ensures these products arrive at the right time to avoid unnecessary storage charges and make every delivery deadline.

### Contractor-Installed Items

CME can provide many of your contractor-installed items, typically called out when needed by the construction team.

CME gets your new equipment assembled correctly in our warehouse prior to delivery.

## Direct-to-Site Delivery & Installation

When you are ready to take delivery of your items, CME will be there. Our service is truly turn-key. When we leave your facility, you will have all your equipment in the right place, ready for patients.

### **Biomedical Services**

Many biomedical teams are stretched and cannot do the checks necessary to meet the opening date. CME can amplify your biomed team. We have a crew that can assist with electrical checks, battery checks, asset-tagging and equipment inspections to get you open on time.

### Work with Your Team

We are experts at working with all your new construction team members including inhouse staff, construction & design teams, outsourced equipment planners, architects, PMs, GCs, etc. Every project is a little different and we are flexible enough to work with everyone involved in your project within your guidelines.

CME's pledge is to get your new facility open on-time and be completely functional when those doors open for business. Let us be a part of your new construction team. You will not be disappointed.

WHAT WE SEE	HOW CME CAN HELP
<b>Budgets</b> are tedious to do and can involve sending quotes to over 200 manufacturers. Accessories are missing, products are outdated, items are duplicated	Our equipment specialists provide a <b>detailed product quote</b> including high-quality, budget-conscious alternatives if requested. CME also can provide suggestions on HAI reducing equipment and the latest technologies
<b>Logistics</b> are sometimes overlooked or underbudgeted	We provide a <b>detailed logistics and direct-to-site delivery quote</b> that can include warehousing, staging, assembly, labeling, asset-tagging, delivery direct to the rooms, installation and biomedical equipment services
There is <b>no one to do the assessment</b> of equipment for reuse	CME can assess and value equipment being considered for reuse
Products are missing spec sheets, wrong accessories, wrong part numbers	CME will <b>provide spec sheets</b> for all equipment to ensure they fit the design and the need. We make sure the right accessories go with the right equipment
End-users making decisions with the <b>wrong information</b> and without looking at all options	We can <i>arrange demos and/or trials</i> of new equipment you might be considering
Too many POs generated, and the right products are not always ordered	CME can <b>aggregate many of the POs</b> into one and make sure you get what you want. Our breadth of product allows us to be your one-stop-shop for your equipment needs
New equipment is <i>delivered to the construction site</i> and there is no one to receive it	With over 30 strategically located service centers nationwide, we will receive and store your valuable equipment in a location close to your new facility
<b>Products get lost or stolen</b> because there is no security at the construction site	CME will <b>keep your products safe</b> until you are ready for them
<b>Products arrive too early</b> and need to be securely stored. No coordination of product arrival or knowledge of on-site location	CME's unique <b>Product Management System (PMS) tracks your project line items in real time</b> from PO creation to delivery at the site in specified rooms, whether the items are coming to our local warehouse or your warehouse
Contractor-installed (CI) items arrive too early or too late	We will make sure your <i>casework, wire carts, gloveboxes, icemakers, refrigerators</i> and any of your OFCI items arrive in time
CI deliveries can't always be easily scheduled due to site readiness constraints	We can break up shipments and deliver the right number of items at the time you request directly to the rooms or at a place convenient for your contractor
Assembly taking place at the new facility; creating trash and dirt	We assemble in our warehouse and keep the packing materials and mess where it belongs, in our dumpsters and not in your new facility
Assembly being done by untrained personnel with the wrong or inferior tools	CME assembles most items in our local warehouse where we have the right tools and a trained team to assemble products
Items being delivered to the <i>wrong</i> rooms, a staging area or the dock	We will stage your items, pack them safely in the right truck for the job and deliver everything direct to the right rooms, in the right configuration
Items being moved incorrectly without the right tools causing damage	CME brings the right tools and the right moving equipment to ensure no damage is done
Items need to be installed and the contractors are no longer on site	We know your construction teams will take care of most of the installation, but we have these services available to augment your own crew
