

## Summer Checklist for Healthy Trees!

### **Check for problems!**

*If you see any of these warning signs on your trees, call Giroud:*

- Signs of insects on leaves and branches
- Yellowing or discolored leaves
- Lack of new growth or dwarf leaves
- Late to leaf out or only some sections of the tree leaf out
- Excessive deadwood
- Peeling or discolored bark/Sticky residue
- Leaves with abnormal spots
- Twigs or branches dying back
- Mushrooms growing from roots or trunk

### **Get an inspection.**

- Have your Giroud ISA Certified Arborist check your trees for cracks, hidden deadwood and unsafe root conditions...they're prime candidates for storm damage and disease.

### **Prevent storm damage**

- Regularly pruned and maintained trees are least likely to sustain damage in a storm. Thinning the crown reduces wind resistance and top-heavy limbs.

### **Let the sun in!**

- Elevate branches away from your pool, driveway and walks.
- Clear branches away from the roof or sides of your house to prevent storm damage, mold, mildew and roof rot.

### **Tick and Mosquito season is upon us!**

- Protect your family and pets from these pests and the diseases they carry. Get Giroud's Organic Mosquito and Tick Control Program that's safe for children, pets and pollinators. Also, have Giroud clean-up overgrown areas and prune for more light on shady tick habitats.

### **Save your Ash trees!**

- Emerald Ash Borer is 100% fatal to Ash Trees. All Giroud customers are in the high risk zone. These complex treatments require precise dosage calculation, setup and monitoring. Giroud's PA Certified Technicians are specially trained to apply Emerald Ash Borer treatments.

### **Give your landscape a well groomed appearance**

- Remove deadwood and prune your overgrown trees and shrubs. Additionally, improve your view or enhance a landscape focal point with selective pruning.

### **Help Sick Trees Get Healthy!**

- Are your trees showing one or more of the warning signs listed above? The problem may be in the soil. Your Giroud Arborist can test the soil, evaluate the roots and if needed develop a customized treatment program to nurture your tree back to health.
