ENSOCARE WELLPLAN

POWERED BY

Lower costs, enable patient engagement and improve outcomes using digital care plans.

Enable Patients to Self-Manage and Connect to Care for Chronic / Acute Conditions

The new patient experience is real-time, connected, and extends well beyond the hospital or clinic. It's personalized to the needs of each patient. It's focused on outcomes – not just clinical outcomes, but also those important to patients. It also has to be cost-effective, for both consumers and payers. Providing patients with tools to self-manage with remote support is a key factor in improving the patient experience, and ultimately outcomes.

Ensocare Wellplan, powered by Wellpepper, enables the delivery of highly actionable and engaging digital treatment plans based on their own best practices and evidence-based protocols, track outcomes in real time and make the necessary adjustments to improve care. For patients, Ensocare Wellplan provides personalized treatment plans that are easy to understand and follow. Powerful analytics for healthcare organizations and a simple, engaging platform make the challenge of care plan compliance easier for both patients and providers.

“This program has empowered me, lifted my morale, renewed my hope, and given me tools. Thank you for helping me regain my life!”

*– Parkinson's patient, Boston University Center for Neurorehabilitation**

ENSOCARE WELLPLAN

solves common challenges patients face in self-managing their care:

- Lost or difficult-to-understand care plan or discharge instructions.
- Lack of communication and a way to connect when questions or problems arise.

ENSOCARE WELLPLAN

solves common issues providers face in maintaining control over care plan design and a lack of awareness surrounding care plan compliance:

- No visibility into patient care plan adherence, which makes early intervention difficult.
- Lack of measurable data that can be used to gauge the effectiveness of care plans and patient outcomes.

Interactive Digital Care Plans

Increased patient satisfaction & improved patient outcomes

Provide support outside the clinic: 9/10 patient satisfaction in 1-year randomized control trial.

Patients who follow care plans have reduced complications: fewer ED visits and hospital admissions in clinical trial.

Lower costs of care

Prevent readmissions: rules-based alerting identifies patients at 3 times greater risk of readmission.

Single standardized system: consistent care plans across different providers and organizations ensure dissemination of best practices for better outcomes and lower costs.

Increased access to care

Find the right patients to see: machine-learning message classifiers identify patients that need the most support.
