

Overcoming Barriers to Improve Care Transitions

Leveraging the Right Technology Enables Superior Post-Acute Patient Outcomes

1

STREAMLINE MULTIPLE, DISPARATE WORKFLOWS

Implement care coordination technologies that can integrate with multiple EHRs

Boost operational speed, efficiency, and accuracy.

Streamline transitions and merge workflows into one seamless interface.

Significantly reduce clerical effort and increase workflow efficiencies.

2

STRENGTHEN POST-ACUTE NETWORKS

Utilize solutions that enable easy communications with vetted certified post-acute entities

Quickly transition patients to the best post-acute facility by simultaneously communicating with multiple potential providers.

Leverage mobile tools to expedite the transition process and receive nearly immediate feedback from multiple post-acute providers.

3

PROMOTE TRANSPARENCY

Simplify ongoing post-acute follow up communications

Coordinate with post-acute facilities and share patient health indicators and treatment details in real-time.

Bridge possible care gaps while promoting quality and continuity during the transition.

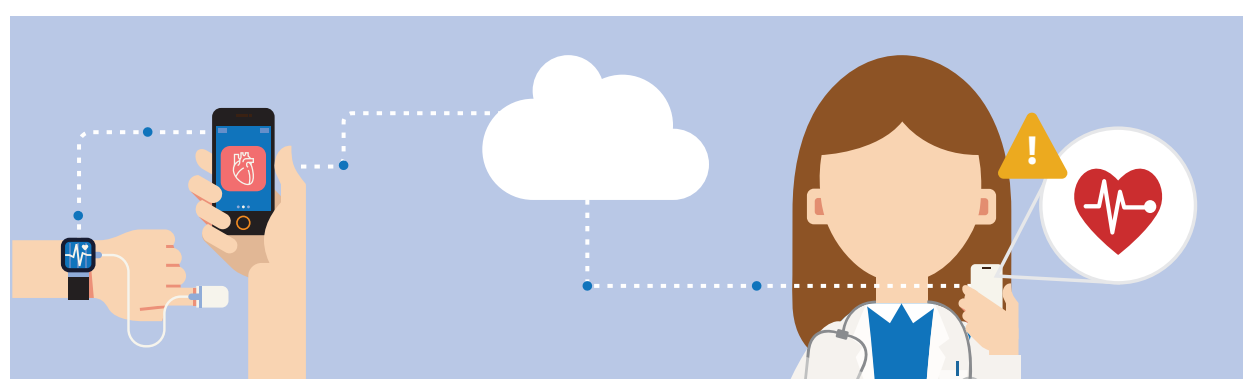

Enhance the patient experience by providing patients with the most updated information and education.

Reduce readmission risks while supporting more favorable outcomes.

4

IMPROVE PATIENT ENGAGEMENT

Encourage patient participation in managing their health using innovative technology

Automatically access readings of patient vitals via Bluetooth-enabled at-home devices.

Involve family members or primary care physicians when necessary **using care coordination apps.**

React promptly to missed readings or potentially harmful trends.
