iStreet Solutions helps get a network device manufacturers SAP instance online, on time

Aruba Networks needed to update its information technology to provide access to timely data within and across their operations.

Managing Accelerated Growth

Aruba Networks designs and delivers mobility-defined networks that empower a new generation of tech savvy users. The company has offices throughout the Americas, Asia-Pacific/Japan and Europe/Middle East/Africa regions. To manage aggressive growth, Aruba executives required faster access to complex information, integrated and standardized across all business units. Legacy IT systems were a series of customized applications and stand-alone packages that were not inter-operable. Business management also realized the need to establish company-wide business processes and IT standards. Silos of current data networks existed. Systems had been outgrown. And critical data were often inaccessible or hard to produce in a timely fashion.

Among the criteria Aruba used in selecting software and implementation partners was the ability to use off-the-shelf software, and to have the ability to roll out the new system at an accelerated pace. The project implementation included four critical components: software, integration, hosting, and hardware.

Speed and Efficiency

To accommodate a prompt implementation, iStreet Solutions chose an implementation approach that enabled Aruba to have availability to their SAP instance within the week. The IaaS platform chosen was a high performance cluster that also complied with energy efficiency standards. The implementation team included an SAP certified integration partner working in partnership with the Aruba and iStreet teams, providing an integral service and ensuring the success of the project.

A Scalable Plan in the Cloud

A hosted solution enabled Aruba to focus their internal resources on specifying requirements for the enterprise transformation initiative and working with the system integrators to define the software implementation approach. Furthermore, flexible contract periods enabled them to pay for the hosting resources as they were brought on line.

Online, On Time

iStreet Solutions rapidly deployed the hosting infrastructure so that the development of SAP's application could commence on schedule. Aruba then successfully achieved the roll out of a secure, integrated, high availability system.

Once the implementation was completed, iStreet Solutions continued to provide BASIS administration services, general maintenance, support, and an uptime commitment of 99.5%.

Industry
High Tech & Electronics

Business Issues
Rapid time to Deployment and Go Live

Solution
- SAP
- Business Intelligence
- Phased approach for rollout

Results
- SAP certified hosting partner
- Global view of information
- Integrated system
- Standardized processes
- Secure system with 100 percent up time

Products/Services/Solutions
SAP Product Portfolio
- Enterprise Resource Planning (ERP)
- Business Intelligence (BI)
- Customer Relationship Management (CRM)
- Solution Manager

Complete Managed Hosting Package Including: Application Management, maintenance, operations, and support
