

B:more:aware Intrusion Panel with Integrated IP Video

BOSCH
Invented for life

The need for video alarm verification to reduce false alarms and provide verified response continues to grow. End users also look for simple ways to interact with their systems and see inside their home or business from their desktop or from a smart phone.

Most systems available today require a third party server or a cloud-based service. This can be a point of failure, in that if the connection to the server fails, the service may not be available for multiple accounts. It also reduces the installer's recurring monthly revenue because they must pay for the service.

An Intelligent Solution

With Bosch intrusion to video integration, there is no server required. The control panel treats the camera as an integrated device and provides commands directly via a local area network. This eliminates the need for a third party server, reduces costs and eliminates a potential point of failure.

B Series panels integrate with Bosch IP cameras, allowing the camera's video motion detection to activate points on the panel and panel events to activate camera actions, including sending video snapshots via e-mail. This provides an easy path toward video alarm verification.

Make the most out of your intrusion detection and video surveillance

Verify alarms and deliver new services to end users with video alerts of system events sent right to their smart phones.

Features

Alarm Verification

Latch-Key

Video Motion Detection Reporting

Video Event/Intrusion Event Synchronization

Benefits

Receive video e-mails or text messages from intrusion events such as burglary and hold-up

See video of who disarmed the system, to ensure that a child has returned home safe, or an employee has opened the store at the correct time

Use the video motion detection built into the Bosch IP camera as an intrusion alarm which activates the local sounders and keypads and sends a central station report, or sends text messages to up to 16 recipients

Correlate intrusion alarm events with recorded video by activating a camera alarm from the intrusion system. Reduce nuisance reporting by sending video only during armed periods or a specific time window

B5512, B4512

IP 2000 microbox and microdome cameras

Combining the modern capabilities of B Series Control Panels with IP cameras provides a seamless, cost-effective total security solution.
