

Remote Security Control

Control Your Bosch System from Anywhere

BOSCH

Invented for life

Bosch control panels provide the ultimate in security controls with an array of functions and flexibility for integrated intrusion, access control and fire alarm monitoring. A number of convenience features are available, including the Remote Security Control app for iOS devices. With Remote Security Control, you can control your panel directly from your iPhone, iPod Touch, or iPad.

Remote Security Control allows you to arm and disarm your security system over the Internet or through your local wireless network. Turn on or off any outputs connected to your system—including thermostats, lights, and more. And, for GV4 systems with access control, you can lock, unlock, cycle or secure doors.

Each system can have multiple Remote Security Control users, and each user can access multiple panels, making it easy to oversee multiple locations.

Remote Security Control is available for both GV4 and B series panels that use a Conettix IP communication. Conettix IP offers a high-speed, secure path for communication that also reduces costs. Additionally B Series control panels can be operated over the panel's cellular connection, without requiring an Ethernet connection.

Features	Benefits
Works with iPhone, iPad, and iPod Touch models with iOS or greater	Control your Bosch B Series or GV4 panel from anywhere using these mobile devices
Arm/disarm and grant access to your building or home	Delivers flexibility and convenience for system users
Unlock/lock doors and turn on/off outputs remotely	Secure people and premises regardless of your location
Access real time panel status	Provides peace of mind that assets are safe and secure
