

# 5 WAYS CASH RECYCLERS

## Improve Branch Operations

### Time spent handling cash

Manually = 45 sec avg.  
With Recycler = 8 sec avg.

You gain about 30 seconds of customer interaction time when you automate cash handling by using a recycler.

### Transaction Speed

3 : 2

TCR Manual

With a recycler, you can conduct 3 transactions for every 2 done manually. This can speed up lobby and drive through lines by 35-40%.

### vault buys & sells

How many vault buys and sells would you rather make in a day?

Manual	TCR
Slow Day: 4 - 5	Slow Day: 0
Busy Day: 10 - 15	Busy Day: 1 - 2

### Staffing Model

Without cash automation, your staffing model may look like this on a daily basis: 4 tellers and 3 CSRs.

When you automate with a recycler, you can create a dual function staff that looks like this: 4 - 5 universal tellers.

### Cash Environment

In a manual environment, 4 tellers would have \$15,000 each in their drawers. A recycler is a secure vault and the 4 tellers now have \$1,000 each, reducing the amount of exposed cash by 90%.
