Managed Vulnerability and Patching [MVP]

We Scan, Patch, and Validate Your Systems to Elevate Your Vulnerability Management Program

Many organizations struggle to find, hire, train, and retain the qualified security experts they need to get the most out of their security solutions. The problem is more complex for vulnerability and patching as it involves multiple tools and typically multiple teams. CBI's MVP offering leverages two industry leading security tools and our 24x7 SOC staffed with certified engineers. Using Tenable's vulnerability solutions (SecurityCenter, Nessus Pro) and IBM's BigFix patching software CBI will identify and remediate against a wide variety of vulnerabilities within your environment.

CBI MVP Services Offered

If you currently own either tools, we will leverage them for you. If you don't, we can include the license costs in the monthly managed service payments.

Perform regular vulnerability scans across your environment

Scan and Patch systems inside and outside your network walls

Free Up internal resources for more high-value tasks and projects

Establish Maintenance Windows to ensure that systems aren't patched when they shouldn't be

Enhances your security incident identification and response with 24/7 monitoring by credentialed security engineers

Fault/Incident Management: 24/7 fault and performance monitoring of endpoint protection solutions

Change Management: Evaluate, approve and perform approved change requests related to scanning and patching

Service Management and Reporting: Activity status reviews and coordination with your team on critical vulnerabilities and zero days. CBI will provide tremendous amounts of visibility into your environment as well as the activities that we are performing.
