

# CYBERSECURITY

## FOUR STEPS TO ENSURE TECHNICAL COMPLIANCE

We've combined the basics of cybersecurity into four core components:

### PREVENTION

Did you know that many newsworthy breaches are preventable? In fact, over 90% of security breaches last year could have been prevented with varying levels of cybersecurity solutions

### PROTECTION

While prevention is the first step in keeping attackers out, you must also ensure that sensitive or valuable data held within your network is properly protected.

### DETECTION

Unfortunately, there is no such thing as 100% prevention. Hackers and attackers are constantly evolving, always finding ways to evade the security that organizations have in place.

### RESPONSE

Let's be honest, it's not fun to think about what might happen if a threat bypasses all of your security measures. Having a Data Breach Response Plan is important.
