

**FOR IMMEDIATE RELEASE**

**Leading Global Biopharmaceutical Selects TrialMaster<sup>®</sup> EDC for CNS Drug Trials**

Fort Lauderdale, FL, June 9, 2015 - OmniComm Systems, Inc. (OmniComm) (OTCQB: OMCM), a global leading provider of electronic data capture and clinical data management technology, announces that a global biopharmaceutical company has selected TrialMaster EDC for nine clinical studies spanning several different central nervous system (CNS) drug programs.

The release of TrialMaster 4.2 was a primary reason for this biopharmaceutical company's decision. TrialMaster 4.2 includes over 300 new innovative productivity and functionality enhancements. TrialMaster's intuitive user interface and innovative data capture, data management and reporting functionality were important factors in the selection. Deploying studies in an efficient, timely and cost effective manner was especially important. OmniComm Systems has been engaged to perform the study builds for all nine clinical protocols – ensuring a high degree of study build quality and re-use efficiency.

“This award is further validation of the fact that the market expects EDC to continually evolve and OmniComm has yet again been rewarded for delivering the most innovative EDC system”, said Kuno van der Post PhD, SVP of business development, OmniComm. “TrialMaster was selected for fast build times, guided data entry, automated SDTM mapping and ability to manage a Risk-Based Monitoring Plan.”
