Life Science Solutions
to Empower the Patient Journey YOUR Way

YOUR Platform | YOUR Way

Anju Software is a leading provider of comprehensive software solutions to the life sciences industry, spanning the spectrum from clinical operations to medical affairs. While traditional technology providers offer platform solutions that force you to adopt their technology their way, the strength of our offering focuses on delivering YOUR PLATFORM, YOUR WAY. Leveraging the Anju Bus integration technology, Anju will add complementary solutions to YOUR environment and create a tailor-suited PLATFORM that perfectly meets YOUR needs...introducing the Anju PERSONALIZED PLATFORM™.

ta-Scan

A clinical business intelligence platform that semantically links data to help you make informed decisions regarding trial planning, site selection and expert profiling.

TrialOne

The leading proactive eSource and early phase site automation solution. Also offering T1xpress, a pre-fab eClinical solution to automate Phase I Research through a simplified implementation.

IRTMaster

A tool that redefines Interactive Response Technology in clinical trials through a wholly configurable, self-service enabled randomization and trial supply management application.

TrialMaster

The most intuitive EDC suite on the market featuring superior usability and flexibility for Phase I-IV clinical trials.

ClinPlus

A software solution that combines CTMS, eTMF, EDC, and IWRS into a unified, cloud-based, easy-to-use platform.

AutoEncoder

A modern tool for coding clinical data against all formats of MedDRA and WHODrug medical dictionaries

Acuity

A powerful and flexible data aggregation, visualization and analytics platform driving actionable knowledge and facilitating Risk-based Quality Management in real time.

BioStats TLF

An FDA-submission capable, quality statistical table and listing authoring tool powered by SAS.

IRMS

A collaborative Information Request Management System that allows you to easily capture requests for medical information, adverse events and product complaints while being able to respond, report and track all activities.
