

**FOR IMMEDIATE RELEASE**

**OmniComm Systems'® TrialMaster® EDC Selected to Run Global Patient Disease Registry**

Fort Lauderdale, FL, October 8, 2015 – OmniComm Systems, Inc. (OmniComm) (OTCQX: OMCM), a global leading provider of clinical data management technology, announced today that TrialMaster EDC was again selected by a leading biopharmaceutical company as the platform for a large, long-term global patient disease registry. Additionally, OmniComm's Transformation Services team will perform another large data migration from a legacy platform leveraging the proprietary OmniAdvance™ methodology.

TrialMaster was selected for its inherent flexibility and broad capabilities to support a wide variety of late phase clinical studies including patient registries. OmniComm's significant expertise and proven success with studies and patient registries, of all sizes and disease categories, was of significant importance in their selection criteria.

"This selection brings significant value to all parties – OmniComm, our sponsor, the investigator sites, and most importantly the patients, who benefit from the important rare disease research," said Ken Light, EVP of transformation services, OmniComm Systems. "The fact that this sponsor has once again entrusted OmniComm as their EDC partner for large disease registries, is a testament to the rich set of EDC system functionality, along with the resources and methodology we will employ to design, build, migrate, and deploy this long-term, global registry."

Data migration services are delivered by OmniComm Transformation Services, providing professional services that have demonstrated delivery success spanning data migration, integration, data standards, risk-based monitoring, process optimization, and business intelligence.
