

Juristat Platform *lite*

Welcome to Juristat Platform *lite*

Your personal portal into the USPTO

Juristat Platform *lite*

brings the power of Juristat's innovative tools together to improve patent prosecution and boost the bottom line. Juristat Platform welcomes our existing customers into a new era of Juristat.

- **Monitor** applications like never before
- **Discover** trends and uncover opportunities
- **Identify** emerging technologies - and competitors
- **Find** new clients and track outside counsel performance
- **Plan** more efficient and effective patent prosecutions

*Welcome to Juristat Platform **lite***

Patent and Application Text Search

Our powerful search algorithms and intuitive interface help sift through more than 9.5M patent applications and related documents. Free yourself from searching one app at a time, by application or publication numbers only, with full-text searching and our rich set of filters.

- Search titles, abstracts, descriptions, and claims independently or all at once
- Compare large bodies of text across our database to find similar applications
- Use Boolean operators, prefix, and proximity searches to surface the most relevant results
- Contact our team to get full access to the full set of filters

- Name, save, and retrieve searches
- Update saved searches with the touch of a button

- Easily narrow your search to specific parts of an application

- Get quick analysis of applications by disposition types, filing date, classes, and more along side your search

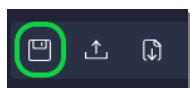

Monitor and Manage Applications with Platform

Juristat Platform takes you beyond searching and analytics to help you actively monitor and manage your patent prosecutions.

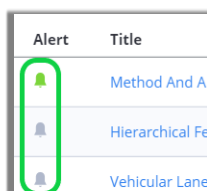

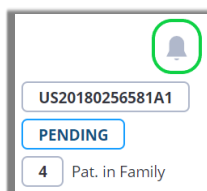

All of your applications in one place

- Save imports and searches to build dashboards for quick retrieval
- Import up to 4,000 application or publication numbers from a single CSV
- Export up to 1,000 application records in an easy to use and share CSV file

Alerts for the most important applications

- Get email alerts for any changes to an application's file history
- Toggle alerts on and off by clicking the bell icon

Juristat Platform lite

Streamline your workflow with unified search, analytics, application monitoring, and more.

- A continually updating and expanding database of more than 9.5 million applications and associated documents
- Data compiled from every publicly available USPTO data source lets you search the breadth of the USPTO
- Saved searches let you easily monitor applications and come back to the data you're most interested in
- Proprietary search algorithms and robust filters help you find the most relevant information
- Platform Lite comes alive with our available expansions including Examiner Report View, Business Intelligence View, and multiple search result views
- Available expansions let you seamlessly transition from researching to monitoring and assessing your applications and
- See our Platform Primer or read below for more

Platform lite Expansions

View Your Data Any Way You Like

Juristat Platform's set of views are available add-ons to Platform lite that let you customize how you see your search results. Table View helps monitor and compare applications, Card View provides a quick look at application titles, abstracts, and drawings, and Charts View shows analytics and trends within your search parameters. Our customizable Application View provides detailed information on an application including file history and drawings.

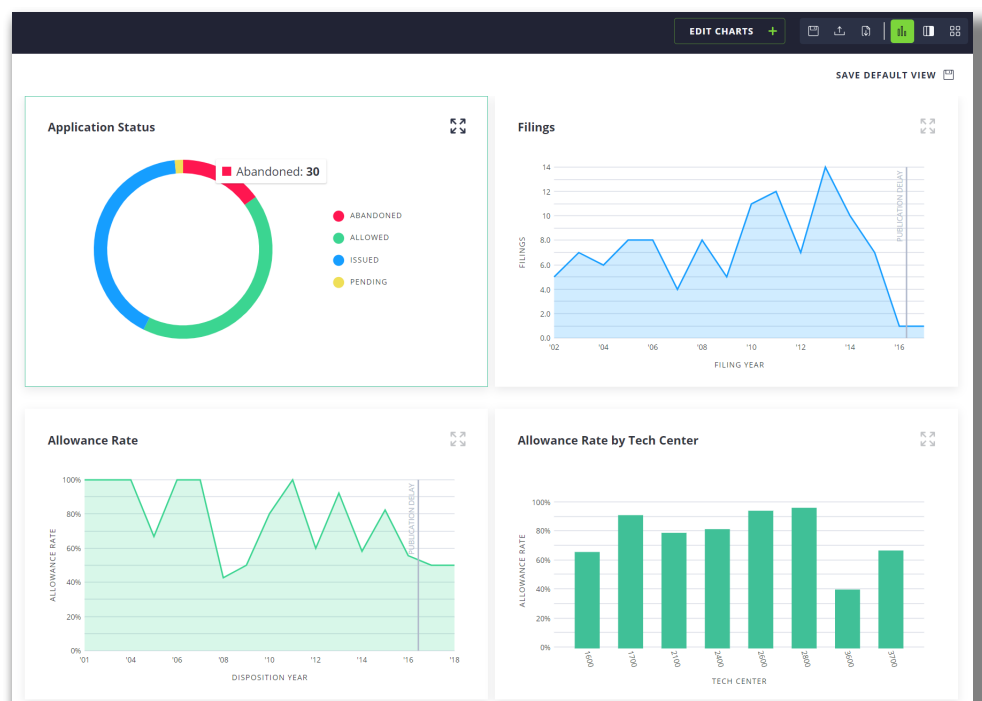

Card View

- Shows a list of applications, each with its own card for rapid review
- Provides title, abstract snippet, current status, patent family count, drawings and more
- Includes curated charts that help provide context to your search
- Set up email alerts for any application with a single click

Charts View

- Select from more than 15 different charts and analytics
- Add, remove, reorder, and save charts to your default view
- Printer-friendly for easy sharing and documentation
- Hover over graphs to see detailed information

Abstract

Some embodiments of a method for premises management networking include monitoring premises management devices connected to a gateway at a premises; controlling premises management devices connected to the gateway at the premises; receiving, at the premises, an uplink-initiation signal associated with a network operations center server; and in response to the uplink-initiation signal, initiating, from the gateway at the premises, communications between the gateway and the network operations center server; and communicating, during the communications between the gateway and the network operations center server, information associated with the premises management devices.
