

## ***Calypso Files Required to Author a Renishaw Equator Program***

After a Calypso Inspection program has been run, Calypso saves the program and results data files in the part program folder (what ever the operator named it), located under Calypso\Parts\.

In this folder, you will see files like “actuals”, “inspection”, “model.fct” and others, including a sub-folder called “geoactuals”.

Please zip up the entire contents of this Part Program folder (including the “geoactuals” sub-folder)
