

## Boutique Cottages in New Zealand Countryside Relies on Grandstream's Long-Range WiFi AP

### *The customer*

Riversong Cottages is a "modern, cosy and boutique" accommodation in Muchison, South Island, New Zealand. Nestled in the countryside amongst the Buller River and mountain views, Riversong features 2 two-bedroom cottages, a studio unit and a main building.

### *The need*

As WiFi access is expected from most travellers, Riversong needed to offer its guests strong, reliable wireless internet access. As the cottages and main building are spread throughout the property, long-range WiFi AP were needed, yet all the options they had tried failed to meet the signal strength and throughput needs of Riversong's customers.

### *The solution*

Riversong's technology manager, Murchinson Computers, worked with their distribution partner, GoWiFi, and recommended that the cottages implement Grandstream's GWN7600LR. The device easily solved all signal strength, range and throughput problems and allows Riversong to now offer a long-range and powerful signal to cover the entire property. The Grandstream solution also offers a very simple management interface, ideal for quickly changing passwords.

### *The result*

*"After changing to a Grandstream GWN7600LR, all of our problems were solved in one go. It was really easy to install and setup, and happy customers mean our TripAdvisor score is rising steadily."*

- Robert King-Tenison, Murchinson Computers
