

Making Wellness More Actionable

What the world of benefits needs is technology that can track the compliance and participation of wellness program rules—using a variety of inputs. Businessolver® steps to the plate with its HealthTrackerSM wellness aggregator technology.

Aggregating Data & Driving Outcomes

HealthTracker wellness aggregator—built within Benefitsolver® benefits administration technology—links a variety of wellness inputs, including wellness vendors, healthcare providers and ongoing employee input, with your benefits program. We believe aggregating these sources with technology is a critical factor in the success of programs that combine healthy activity with insurance-based financial incentives.

The equation is simple: Employees get engaged with wellness programs, you reap the benefit of improved health behavior, and better outcomes are achieved for everyone.

Built within single source benefits solution

Collects manual inputs from employees and dependents as well as data files from other vendors

Aggregates year-round wellness data and applies outcomes to insurance-based incentives

Built to support multiple outcome levels (e.g., gold, silver, bronze)
