## HessAmerica, Nordeon, and Griven to Exhibit at 2019 LIGHTFAIR® International – Booth 2825

*Gaffney, South Carolina – May 15, 2019*

HessAmerica, Griven USA, and Nordeon USA, members of the Nordeon Group, will be exhibiting at 2019 LIGHTFAIR® International at the Pennsylvania Convention Center in Philadelphia on May 21-23, 2019. The three companies will be together at booth # 2825.

HessAmerica, recognized for premium innovative outdoor lighting products with European styling and design, will unveil **MOSAIC**, a new series of architectural columns featuring a selection of five different panel designs inspired by nature. The columns will be on display at the booth alongside complementary bollards. Several variations of the new multi-functional **Reno Elements** column, capable of incorporating non-lighting functions such as digital signage, sound, and CCTV, will be on display. Additionally, the multi-functional **Arini** and **City Elements**, including **City Elements 200**, an eight-inch diameter column will be at the booth. The **LINEA 950** wall luminaire will make its debut as the latest addition to the current offering of pole- and wall-luminaires and bollards.

Griven USA, an innovator in dynamic color-changing and dynamic white architectural lighting instruments, will showcase **Jasper**, a value-driven, high-power luminaire for accenting or floodlighting of large-scale areas and architectural elements. Other highlights include **Ruby MC** and **Ruby R** recessed inground luminaires with an innovative anti-slip coating design (which does affect photometric performance or color mixing of the LED source), as well as a cross section of surface mounted projectors in various sizes for flood lighting applications.

Nordeon USA, manufacturer of high-quality indoor luminaires for retail and architectural applications, will introduce **HANCE** (*by Lamp Lighting*), an extensive range of track mounted luminaires for architectural applications in three sizes. The innovative streamlined profile incorporates an integral driver, eliminating the need for remote boxes. Other products on display include **Mun Dark** (*by Lamp Lighting*), a playful range of indirect wall mounted luminaires in three diameters for the creative application of light as art; **Stormbell** (*by Lamp Lighting*), a configurable LED pendant luminaire; and **CALVIA** (*by Schmitz-WILA*), thin profile wall and pendant mounting luminaires utilizing edge-lighting technology.

Media personnel are encouraged to visit the Media Center at LIGHTFAIR® International on the second floor of the Pennsylvania Convention Center near Registration to obtain informational USB press kits for the individual Nordeon Group companies.
