

WHY GO DIGITAL?

Security is at the forefront of digital meetings and voting, it supersedes paper in every way by encrypting all votes and sensitive information

Digital provides an environmentally friendly method of running your meeting - there is no need to print, saving both time and paper

Digital voting provides complete and high-level auditability and reporting

Digital voting increases the number of voting styles and options that are available - In particular when it comes to elections

Digital voting provides a much higher level of voting accuracy, with no lost votes or double counting. Proxy votes can also be instantly added

Digitalisation opens up the ability to handle remote participants - from wherever they are in the world

With voting taking place in real time, an instant result can be provided at the close of poll

Digital increases voting engagement both during pre-voting and in the room

Digital meetings are more cost effective, with fewer staff required to help count votes
