

Electronic voting

Lumi's renowned electronic voting system is built on unique, simple to use, 100% secure and accurate encrypted technology.

It will streamline not only the voting process, but all elements of a client's legal meeting, whatever the size. Our voting devices are used at 1000's of AGMs and legal meetings throughout the world, every year.

Want to transform your next meeting?

If you have a question, would like more information, or would like to talk to one of our experienced team, then please scan the 'Contact us' QR code, complete the short form, and we will be in touch as soon as we can. We look forward to hearing from you.

The benefits of switching to electronic voting

Full audit trail of all voting activity.

Reduce your environmental impact by ditching the paper poll cards.

Increased security.

Using smartcards to identify members if required.

Enhanced democracy on legal complexities.

Instant and accurate results with real-time voting.

Reduce the cost of manpower to count paper based votes at the end of the meeting.

Incorporate proxy votes in voting results.

How does it work?

Screen

The voting device provides a large colour screen. This increased screen area ensures that all voters are able to see the questions clearly.

Qwerty keyboard

Although not always suitable for legal meetings, the QWERTY keyboard can enhance any Q&A with the ability for users to send in identified messages to the chairman when this feature is enabled.

Microphone

Our device has a built-in microphone enabling users to join a speaker queue if they wish to speak. The chair will be presented with a list of all members who wish to contribute, and can select from the list who can speak. At which point, that members handset microphone will become active. To ask a question, the member simply speaks into the corner of the handset as with any microphone.

Voting options

Traditional

Although the Lumi devices can accommodate a host of different question types, legal meetings mostly require traditional For, Against and Abstain voting.

Multi motion voting

To combat the large number of resolutions a company can have and the time it takes to vote upon all of the them, Lumi has a method of voting called Multi Motion Voting (MMV). MMV allows all resolutions to be opened at once at the start of the meeting, providing members time to vote until the poll is closed.

Election voting

Lumi's sophisticated solution can also accommodate various election questions. This includes elections via multiple rounds and even candidate dropout rounds.
