

Employee Portal

Empower employees with real-time access to the SAP Business One® data that means the most to them.

Every day you spend considerable time and effort sharing information internally and communicating with your employees. Whether your CEO is travelling and wants the latest P&L breakdown, your field Sales Representative needs to see their latest sales orders, or your Warehouse Manager needs the latest item inventory count, you need to help streamline the flow of this information. What if you could share your SAP Business One data with employees inside and outside the walls of your organization?

Employee Portal places your employees in the driver's seat and empowers them with a real-time, Web-based solution that is seamlessly integrated with SAP Business One. This provides them with the flexibility and tools needed to get the work done - where and when they need to. Employee Portal is ideal for employees inside and outside your organization that do not have need for a named SAP Business One user license, but do need to be able to access key report data within your SAP Business One solution.

Your salespeople are highly skilled professionals who are most effective when in front of your customers, selling, not analyzing data. Using Employee Portal's KPI dashboard, your sales representatives transform their business planning by turning SAP Business One data into intelligence. The real-time dashboard allows sales teams to create, manage and monitor KPIs all in one place, on any device. The drag and drop interface automatically pulls data from SAP Business One and refreshes your dashboard with the latest information. From year over year sales growth to sales heat maps to quote to close ratios, Employee Portal dashboard takes complex data and presents it with clarity, using graphic-rich reports and alerts to steer your sales teams toward success.

Employee Portal Offers:

- Responsive design provides users with an optimal viewing and navigation experience across a wide range of mobile devices
- Real-time, on demand data access to custom queries from SAP Business One that best meet your employees' specific informational needs.
- Ability to view and modify report layouts to see relevant data in a way that makes the most sense for you.
- Enjoy complete report customization using drag and drop columns, dynamic pivot tables, filters, and document drill-downs.
- Customize and save report formats to only see meaningful data relevant to the employee function.
- User level security with employees only able to view their own data – a great feature for large, field sales teams.
- Full support for display of user defined fields (UDFs) within SAP Business One custom fit for your business processes. Easily export reports into Microsoft Excel.

Experience some of the most feature-rich and powerful reporting available with access to any data in SAP Business One. The solution automatically adapts to any screen size, providing a consistent web browsing experience across all mobile devices.
