Grow your business faster with SAP Business One Cloud

An Introduction to SAP Business One Cloud

To grow a successful business and stay competitive, an affordable, scalable platform is critical to streamline business processes and improve decision-making. SAP Business One Cloud is a complete business management solution designed for growing small to mid-sized companies. It integrates core business functions across all departments, from financials and accounting to inventory and production.

As the leading SAP Business One partner, Vision33 offers this trusted application either on premise or via the cloud: SAP Business One Cloud powered by Amazon Web Services.

When you choose to deploy SAP Business One Cloud with Vision33, your growing business will benefit from a faster implementation time and a quicker return on investment. SAP Business One Cloud is flexible and agile, allowing you to mold your business to meet the demands of today's ever-changing market.

How does SAP Business One Cloud work?

SAP Business One data is stored and accessed within the most innovative world-class cloud environment provided by Amazon Web Services (AWS). AWS prevents loss of information and ensures data security far beyond what any in-house system can provide. All of your key business information can be accessed on-demand anytime worldwide. This allows you to focus on other business needs and frees up IT resources and cash from otherwise having to maintain and upgrade server and systems infrastructure onsite.

Choosing to run SAP Business One Cloud offers many benefits compared to traditional IT frameworks, including:

- ▶ Reduced IT needs with no on-premise servers or data centers added
- ▶ Scalability to grow along with your business

- ▶ A secure and durable technology platform that eliminates data loss and downtime
- ▶ Better pricing structure - pay only for what you need
- ▶ Access to business data when and where you need it
- ▶ Optimizing IT staff productivity
- ▶ No long-term commitments or costly upfront capital expenditures for hardware required

SAP Business One Cloud Pricing

Our pricing model is designed for you to pay only for the cloud resources you need. You also get the flexibility to grow your cloud solution whenever needed to meet changing business requirements and size of your employee base.
