- Glass canopies
- Room dividers
- Shower Doors
- Back splashes
- Counter tops
- Elevator interiors
- Donor walls
- Corporate offices
- Museums
- Hospitals
- Hospitality
- Sports arenas

M³ Print

Digital Decorative Glass

Our cutting-edge process prints full color images with ceramic inks at a full 720 dpi. With a maximum panel size of up to 96" x 144", large artwork can be tiled and combined to create monumentally sized installations.

Our experienced, in-house Graphic Designer, will work hand-in-hand with architects and designers to help realize your vision. This collaboration will bring your ideas to life.

Our DipTech AR-4000 was the first in North America and has capabilities that are yet to be realized. With the ability to print friction control glass floors in colors, and Double Vision to print solid color on one side and an image on the other, M3 constantly pushes the envelope and expands your realm of possibilities. Images are printed directly to glass and tempered for safety and longevity. M3 can combine MPrint with our ColorBak back painting or even lamination to produce unique, one-of-a-kind pieces.

MPrint recommends printing on low-iron glass for truer colors.
