SIEMENS
Healthineers 

Focus on your patients

Without worrying about image quality
or complicated workflows slowing you down.

In a busy surgical suite, the need for fast, high-quality images is paramount. A mobile C-arm that is difficult to operate can frustrate surgical teams, waste time, and increase operating costs. With the complete C-arm portfolio from Siemens Healthineers, you and your clinical team can have the superior images you need, when you need them.

Our completely new, redesigned C-arm portfolio is built to be your partner in performance, with high-quality imaging and product flexibility to support your most critical surgical setting—and your budget.

Across our product line you can count on:

- Simplified operation with large overall free space across the product line to accommodate larger patients and provide more room to work.
- Intelligent power management to virtually eliminate overheating causing delays and schedule back-ups.
- Greater visibility with flat detector technology ensures greater anatomical coverage.
- Leading innovations with Flat Panel Detector or 3D technology to help surgeons perform critical procedures safely and effectively.

Cios Alpha

Vision that extends well beyond 30 cm

Cios Alpha's 30 cm x 30 cm (12" x 12") Full View flat panel detector brings you the most comprehensive, detailed images possible—at the lowest possible dose for patients of almost any size. A touch-screen user interface, engineered to be simple and intuitive, offers optimal flexibility in the OR.

Cios Alpha is built to cover general surgery to the most advanced procedures, including vascular and cardiac and everything in between.

You can count on:

- Full View FD technology with 30 cm x 30 cm providing more anatomical coverage with less repositioning.
- Improved accuracy with single touch-button positioning that automatically returns to a saved position.
- Saved time with complete system control where you need it, including tableside for the surgeon.
- Minimized errors with a fully integrated vascular workflow and features to improve efficiency.
- Large power reserves of 25 kW for the most challenging situations, with active cooling to virtually eliminate overheating and costly delays.

Cios Fusion

Fuse surgical versatility with Full View FD

Get innovative imaging technologies that can increase competitiveness and surgical versatility. This mobile C-arm delivers large, crystal-clear images at the right dose thanks to Full View FD and our unique Retina Imaging Chain with IDEAL (Intelligent Dose Efficiency Algorithm) dose management. The light, compact design allows easy maneuvering, and intuitive control features simplify handling.

You can count on:

- A choice of flat detector sizes: 30 cm x 30 cm (12") or 20 cm x 20 cm (8")
- Lightweight and compact for easy maneuverability
- Simple workflow tools facilitate complex procedures
- Supports a broad range of procedures from orthopedics to general to vascular

Cios Connect

Connect everyday surgery with everyday reliability

Cios Connect is the multifunctional mobile C-arm for everyday surgery that helps increase your return on assets. It's suited for all relevant surgical disciplines: ortho, trauma, spine surgery, basic vascular—even pediatric surgery to lithotripsy and endourology.

You can count on:

- High-end features and functionality at a lower cost
- Space-saving, lightweight design for easy maneuvering
- One button-to-image workflow that makes the system easy to learn and use
- Intelligent color coding of brakes, handles and scales for fast, precise positioning

Cios Select

Select smart surgical imaging

Cios Select is the mobile C-arm that blends smart surgical imaging and service from a single source, at a reasonable cost. Benefit from high system availability, low maintenance, reduced training requirements, and a global service network.

You can count on:

- Smart system operation with simple to learn user interface
- Provides low-dose features of a larger C-arm
- Affordable, low-maintenance C-arm option

ARCADIS Orbic 3D

For enhanced precision

ARCADIS Orbic/Orbic 3D is the C-arm with isocentric design and 190° orbital movement, eliminating the need for repositioning and providing unlimited projection flexibility. It is suited for intraoperative use in a multitude of clinical fields: orthopedic, trauma, spine surgery, and more.

You can count on:

- Fewer revision surgeries with intraoperative 3D imaging & evaluation
- Cost savings by reducing the need for post-operative CT control
- Optimized versatility by supporting standard fluoroscopy & 2D/3D imaging in one system
- Maintained mobility, especially over a CT system, with more maneuverability

On account of certain regional limitations of sales rights and service availability, we cannot guarantee that all products included in this brochure are available through the Siemens sales organization worldwide. Availability and packaging may vary by country and is subject to change without prior notice. Some/All of the features and products described herein may not be available in the United States.

The information in this document contains general technical descriptions of specifications and options as well as standard and optional features, which do not always have to be present in individual cases.

Siemens reserves the right to modify the design, packaging, specifications, and options described herein without prior notice. For the most current information, please contact your local sales representative from Siemens.
