

IntelliGO Managed Detection and Response (MDR) cuts the cost, time and risk of building a Security Operations Centre (SOC).

We offer experienced people, proven processes and a Gartner-recognized technology platform that identifies and closes security gaps and responds to cybersecurity incidents.

Cybersecurity needs to incorporate a balance between prevention, detection and response. Buying and deploying prevention tools such as firewalls and anti-virus products alone is no longer enough to protect your company and its private information.

Powered by IntelliGO, either appliance-based or virtual, our MDR service provides 100% visibility into every facet of your network and devices.

It logs all activity to detect and respond to threats across endpoint, network and cloud, and augments prevention tools you may already have in place such as firewalls and anti-virus.

KEY INTELLIGO FEATURES

THE VIRTUAL CISO

Providing strategic advice at the highest level when you need it.

THE TECHNOLOGY

Gartner-recognized technology platform.

THE PPA REPORT

A complimentary Prevention Posture Assessment (PPA) Report of your company's current security.

Incident Response Retainer Services

INTELLIGO MDR CONSISTS OF 7 UNIQUE MODULES

INTELLIGO HYGIENE ANALYZER

As part of our endpoint sensor for laptops, servers and smartphones, the hygiene analyzer monitors for security gaps such as missing patches, anti-virus and host firewall status. This provides best-practice audits for compliance on devices and helps to ensure customers maintain a strong security posture, which will deter cyber attacks or virus infections.

INTELLIGO EDR

Endpoint Detection and Response (EDR) runs on laptops and servers and examines memory, scripts, packets and processes for malicious behavior. This provides the ability to detect and block viruses and many other types of cyber attacks which anti-virus software may miss, such as file-less attacks, scripts and attacks over the network. This will also provide forensic information not tracked by the operating system in case of a breach and allows the quarantine, removal or extraction of files, processes and endpoints on and off the network.

INTELLIGO EVENT VIEWER

IntelliGO provides multiple forms of collection to monitor your network and devices for security, performance, and compliance logs. The on-device sensor runs on the endpoint and captures critical event data required for compliance and the monitoring of system changes, such as account or setting modifications, and auditing of login failures, successes and activities.

INTELLIGO VULNERABILITY MANAGER

Scans for vulnerabilities in your servers/routers and collects information on hosts through open ports, identifying the vulnerabilities that exist within them and showing you what an attacker can see. This provides regular security audits of all connected systems, and assists with compliance and strong security posture.

INTELLIGO DISCOVER

IntelliGO Discover runs on the network, discovers all devices and can control and segment the network (Network Access Control or NAC) to send commands to switches to disconnect them. It can automatically provide dynamic VLAN, ACLs or authorization which provides complete control, helps with compliance, and minimizes the time to enforce security on your network.

INTELLIGO ANALYTICS

Our MDR Center uses our platform to build powerful visualizations to communicate your prevention posture. Our team works constantly to build reports and escalations that provide you with the answers to the questions "have I been hacked?" and "can I be hacked?"

INTELLIGO THREAT INTELLIGENCE

This service, which runs in our cloud, provides a single source for bad IP, DNS and Hash information from honeypots, threat feeds and customer data without duplication. Customers can subscribe to this feed with firewalls or anti-virus and use the information in IntelliGO sensors to find zero-day threats communicating with known malicious hosts.

HOW IS INTELLIGO DIFFERENT?

IntelliGO offers a comprehensive approach for medium-sized companies who do not have a SOC or security analysts and are looking for a cost-effective way to increase their ability to find and remediate security issues. This is different to classical approaches by offering the shortest time, lowest cost and biggest reduction in risk when compared to:

MANAGED SECURITY SERVICES (MSS)

Vendors offering third-party products and level 1 or level 2 analysts will not offer experienced personnel and will need to sell a customer a number of different tools to do the same job.

This provides round-the-clock, low-level surveillance and only notifies clients of security issues instead of finding and mitigating the risk.

We offer all features to all clients and drive their use in our service so you do not fall victim to a breach just because you did not have a product or a particular feature was not implemented.

OTHER MDR VENDORS

A number of vendors claim to provide MDR capabilities but they actually only focus on detecting threats, either on the network or on the endpoints, without ever examining security posture between these incidents.

We provide value every day by helping to increase your security through configuration advice, threat detection and response, threat intelligence and delivering comprehensive reports, with real people to interpret and action them.

BUILDING YOUR OWN SOC

Much like an MSS vendor buying the tools for you, building and maintaining your own SOC is expensive when you consider the costs involved in hiring, retaining and training qualified security professionals.

With IntelliGO MDR, you are given a team of experts and a platform which is pre-integrated to find and stop security threats across your business.

SERVICE COMPARISON MATRIX

	TIME	MONEY	RISK	PEOPLE	PROCESS	TECHNOLOGY
INTELLIGO	Short	\$	Low	High Experience	Proven to Catch Threats	Proprietary
MSS	Long	\$\$\$\$	High	Low Experience	Ineffective Alerting	Purchased
OTHER MDR	Long	\$\$\$	Low	High Experience	Ineffective Alerting	Proprietary, Missing Pieces
BUILD YOUR OWN	Long	\$\$\$\$\$\$	High	Hard to Find/Retain	Hard to implement	Purchased
