

AWS Landing Zone

THIS SERVICE IS FOR...

Organizations that are exploring Public Cloud possibilities to migrate some of their services, and businesses that wish to validate their approach in order to properly establish their Cloud infrastructure foundation based on their current and projected needs.

MAIN OBJECTIVE

Implement a foundation, commonly called a « Landing Zone », to manage various IaaS / PaaS / SaaS Cloud services in an adaptable and scalable manner based on the organization's requirements in terms of governance, security, networking and operational management of the Cloud.

PRICE

- Flat rate, based on scope of the mandate

DURATION

- Generally conducted over a 2-week period or longer

ACTIVITIES

- Architecture sessions to collect needs and requirements
- High-level solution design
- Detailed architecture definition
- AWS Cloud foundation implementation and customization
- Solution parameterization
- Knowledge transfer
- Implementation review and quality assurance

BENEFITS

- Best practices to establish your AWS foundation
- Security and governance framework to ensure data protection
- Customized solution tailored to your current and projected needs
- Full access and understanding of available tools, functionalities and resources
- Solution connectivity with your existing datacentres or other Cloud services
- Readiness to harness the power of AWS native Cloud services (BI, AI, IoT, etc.)

DELIVERABLES

- Implementation of AWS Cloud foundation
- Detailed documentation of landing zone architecture and configurations
- Knowledge transfer to key resources of your team on the technical aspects and operations management within AWS Cloud environment
