PHYSICAL BACKUPS
WITH VEEAM AGENT

veeam

> *Versatile, rapidly deployed and centralised backup solution.*

OVERVIEW

Due to various factors, including complex hardware configurations and regulatory compliance requirements, some physical servers and workstations cannot be virtualised.

To close this gap and ensure your critical data is protected, use Veeam Agent & Veeam Backup & Replication together with Probax's cloud solution to provide your organisation with a comprehensive, reliable and effective solution to deploy, manage and monitor physical backups

VEEAM...
GETTING PHYSICAL
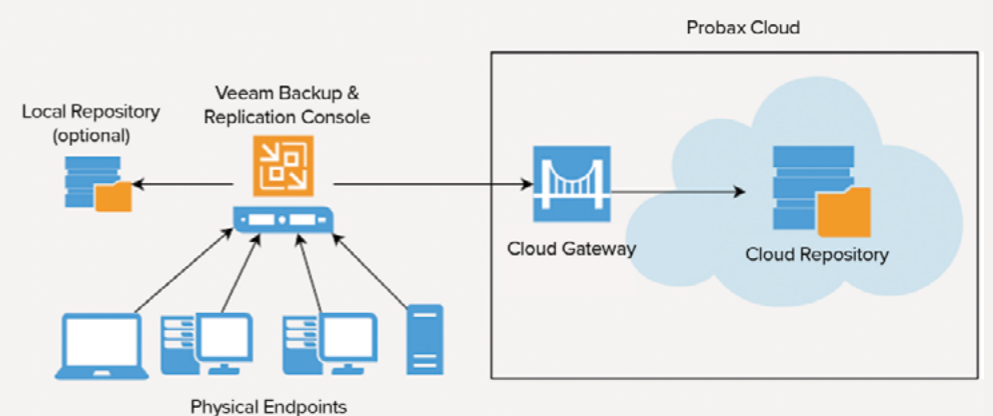

CENTRALISED MANAGEMENT

Veeam Agents can either be managed from the Veeam Backup & Replication Console or from inside Probax Control to handle deployment, licensing and configuration.

RAPID DEPLOYMENT

Veeam Agents can be pushed out in minutes either through Veeam Backup & Replication or Probax Scout. Once Veeam Agent is deployed on protected computers & servers, you can use the Veeam Backup & Replication console or Probax Scout to administer the agents.

3-2-1 COMPLIANT

Veeam Agent jobs can store a local and cloud copy, enabling you to keep three copies of your data, two of which are local but on different mediums, and one copy offsite. We can also push your cloud backups into low-cost Honeycomb VTL archival storage.

Physical Infrastructure Managed with Veeam Backup & Replication

- ✓ Superior management & deployment
- ✓ Availability for public cloud & physical workloads
- ✓ Meet RPOs & reduce the risk of data loss for roaming laptops & tablets
