

User Registration

Welcome to TokenOne Two-Factor Authentication.

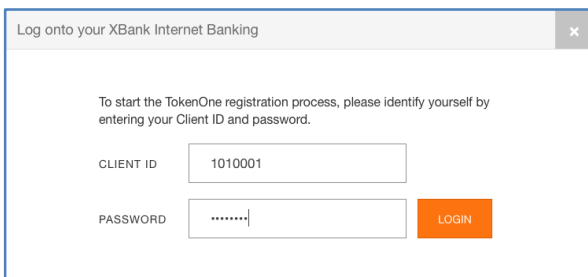

This Help Sheet uses xBank as a reference example however; the experience for your site or service will be similar.

Registration with TokenOne Authentication will start with your service provider asking to prove who you are.

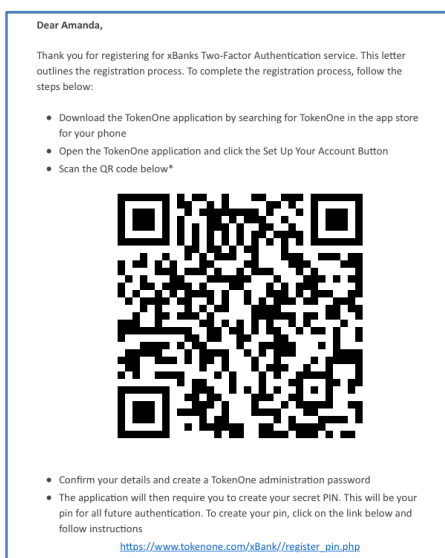

To start click **Attach T1 Authentication ...**

Go to your site or service and enter your credentials (usually Username, Client ID and/or password).

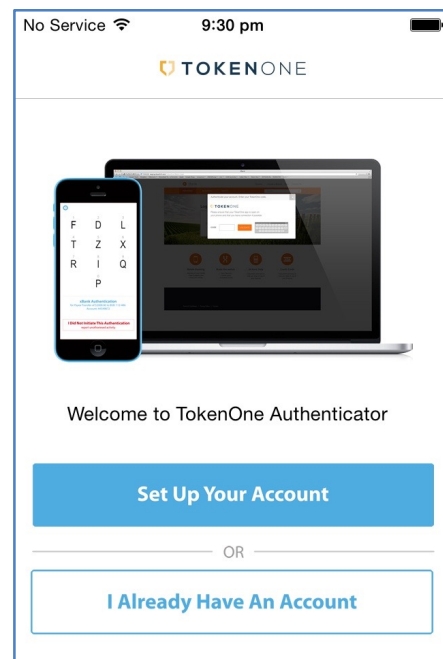

This will trigger the TokenOne **Registration email**. Follow the instructions in this email to register.

1. Download the TokenOne app from your app store to your smart device (phone or tablet). **Tap** to open the app.

2. Tap the **Set Up Your Account** button.

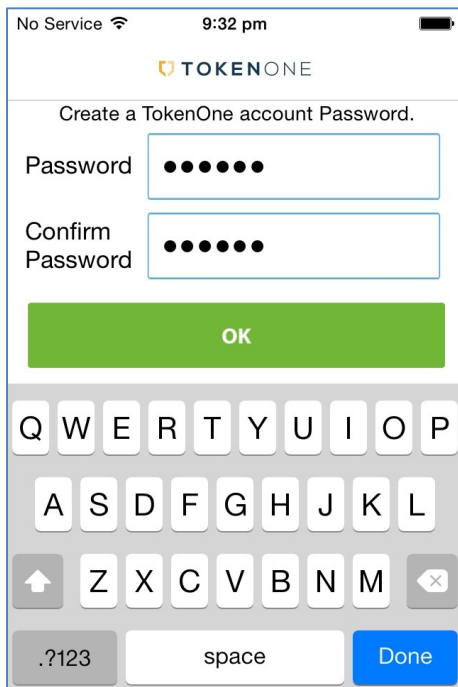

3. Scan the **QR Code** in the **Registration** email with your device.

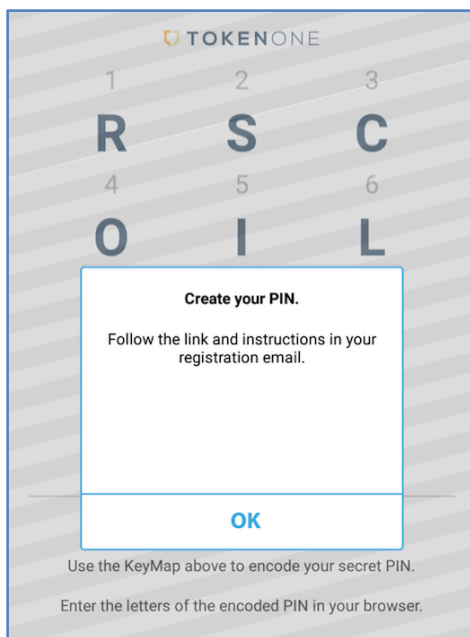

This starts the registration process for the device.

4. Confirm your details and **Create an Administration Password. Tap OK.**

This password is to manage your TokenOne Authentication account.

Your device will now be profiled and registered. Once this is complete you will be asked to create your PIN.

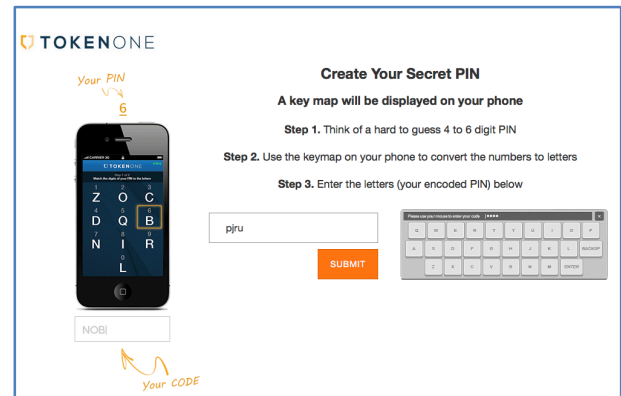

5. Go back to the **original** email on your computer. Click the **Register your PIN** link below the QR code. This will launch your browser.

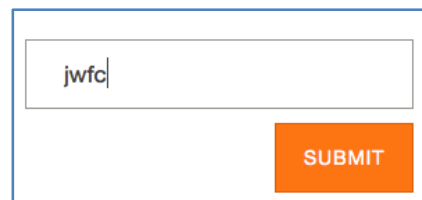

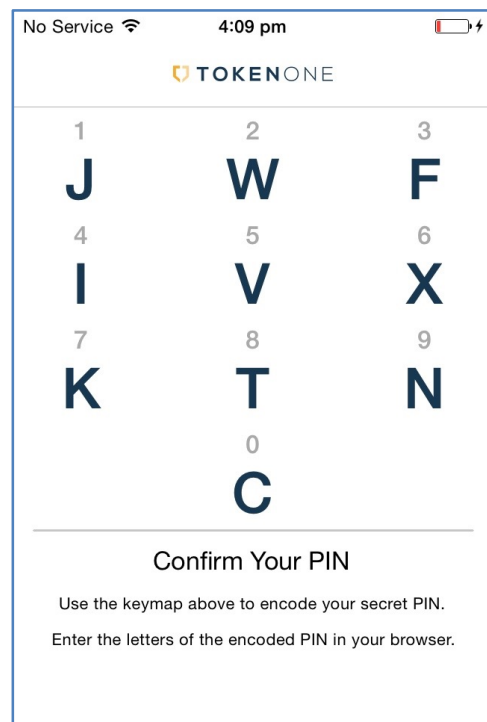

Think of a 4-6 digit PIN to use. **Do not repeat any numbers.**

Tap **OK** and use the **KeyMap** on your device to encode your PIN.

6. Enter the letter code into your browser and click **Submit**.

Wait for a new **KeyMap** and repeat to **Confirm** your PIN.

Now both your site and the device app will congratulate you on setting your PIN.

You are now registered and ready to use TokenOne Two-Factor Authentication.
