TokenOne and Seccom Global announce first white label partnership

Sydney, 4 October 2017 --- Sydney-based cybersecurity software company, TokenOne, and Australian cyber security consultancy, Seccom Global, have announced a new strategic partnership that enables Seccom Global to white label TokenOne's patented authentication technology.

Under the agreement, Seccom Global will sell the TokenOne technology under the 'SGToken' brand, which will tightly complement Seccom Global's extensive suite of security products for its Australian clients.

With roots dating back to the world of spies and espionage from the Cold War and before, TokenOne's authentication technology is based on 'One-Time Pad' principles. This will make it easier for Seccom Global's customers to securely access multiple accounts and services via the internet or call centres using one unique PIN, but without ever entering or revealing their PIN to anyone – not even to the service being accessed.

According to Phil Cuff, TokenOne's CEO, this partnership opens up a new world of opportunity for the growing company who are also focusing on similar white labelling deals with multiple Independent Software Vendors (ISVs).

"Partnering with Seccom Global is a huge milestone for TokenOne as this is the first time we are offering our technology as a white labelled solution," Mr Cuff said.

"This partnership is a great fit for both companies. Seccom Global are growing rapidly and is a leader in their space in this country. Their suite of security products and services is perfectly complemented by the new 'SGToken' authentication product.

"Ultimately, we're both in business to assist organisations – and individuals – to minimise and mitigate the ever-increasing risk of devastating cyber-attacks and data breaches. "

Seccom Global managing director, Michael Demery, said the low cost and high level of security 'SGToken' provides allows Seccom Global's clients to improve protection and usability at the same time.

"This goes against the established rules of cyber security," Mr Demery said. "Usually, the more you secure something the more you need to lock it down and that makes the process quite cumbersome for the user."

“However, with SGTOKEN, not only can we verify the users’ identify each time they authenticate making it one of the most secure options on the market, we can federate access to multiple accounts making it easier for the user to login and work safely.

“After more than 15 years selling cyber security, I have never seen a solution which can address security and usability concerns as comprehensively,” Mr. Demery added.

The white label solution is now available via the major app stores.

About TokenOne

TokenOne is a Cybersecurity software company based in Sydney, Australia. TokenOne’s internationally patented technology makes it easy for companies and their users to replace passwords, tokens and other forms of authentication security with a more cost effective, manageable and convenient solution that is highly secure. Uniquely, with TokenOne a user’s secret PIN is never entered, transmitted or even stored anywhere, except in the user’s memory. Whether it’s a hacker compromising the user’s computer or a company’s system administrator, no one else knows the user’s PIN. TokenOne “Keeps Secrets Secret!”

About Seccom Global

Seccom Global is an Australian-based cyber security consultancy and cyber security as a service provider. For 15 years, the company has carved out a reputation for delivering quality managed internet and cloud based solutions which ensure security, productivity and profitability. The key to Seccom Global’s success is that we always align our goals with those of the customer, not just in terms of cyber security, but for growth and profit. We succeed where our customers succeed as we work and grow together.
