

# GIGABIT CAPABLE CONNECTIVITY DPS

Gigabit Capable Connectivity DPS is open for applications! The DPS includes dark fibre and lit services with which public sector can deliver their network services. The agreement is developed by Crown Commercial Services (CCS) in partnership with the Department for Culture Media and Sports to provide a route to market for building upgrade projects.

Interested suppliers need to demonstrate that they can provide at least one of the following three Service Types:

- **Managed Connectivity services-** The managed connectivity services will require a network connection to be made available between a specified location and services running on the World Wide Web. The services will be offered with flexible bandwidth options using infrastructure that offers download bandwidths of between a lower threshold of at least [100 Mbps] and an upper threshold of at least [1 Gbps]
- **Fibre Infrastructure services -** The fibre infrastructure services will require the provision of the necessary duct, fibre and access infrastructure between two specific locations to allow third party integration into existing network services by the procuring authority or their agent.
- **Broadband services -** The broadband connectivity services are for the provision of a business-class broadband service. The service will be required to access a wide range of managed wide area network services such as VPN tunnels, cloud applications, business class video conferencing, Citrix services, mail services, etc.

With our support you can join the new Gigabit framework and start winning business. We have a 100% framework success rate and have recently listed our clients on the highly competitive Network Services 2 framework. When you join Advice Cloud, **our fully managed service will help you get listed on the new Gigabit DPS quickly, pain free and with a listing of the highest quality.**

Depending on your needs and budget you can choose from:

## STANDARD

- Submission prep webinar
