# Software Asset Management (SAM)

Manage lifecycle, compliance and support in one integrated solution.

Manage and optimize your organization's use of applications with our Software Asset Management (SAM) tool. With assyst ITAM you get deep insight into how and where your business is using software. With it, you can streamline the management of applications, uncover the potential risks and find significant savings on a large portion of the IT budget.

## Full Lifecycle Management

Manage the efficient request, deployment, maintenance, use and disposal of all software with an integrated ITAM/ITSM solution that ties together all of your infrastructure and operations data to give you the full picture of applications - and how they're used and supported in your organization.

## Software and Application Discovery

Discover all the MSIs and executables installed on your Windows devices. Read SWID Tags and retrieve product key information for Microsoft products and more. A comprehensive and consolidated view of all the software installed on your estate through out-of-the-box dashboards and reporting. Normalize and group software titles to simplify reporting.

## Software Deployment and Removal

Maintain a software library of software packages. Automate the silent deployment or removal of MSI or executable software. Track deployment progress.

## Software Blacklisting and Blocking

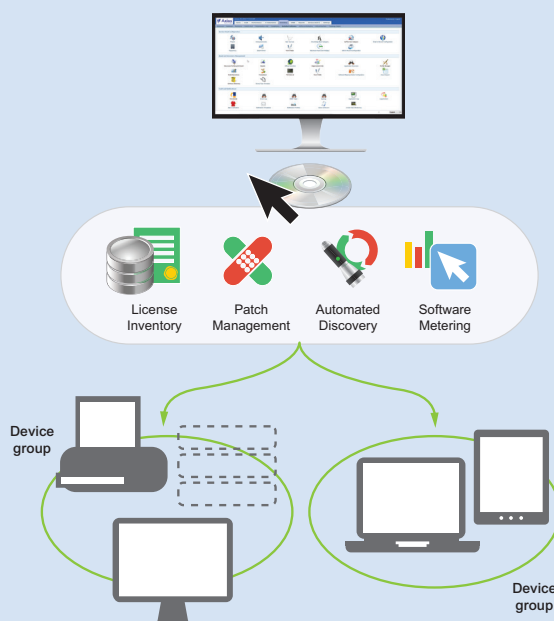

Easily detect, identify and report on any instances of blacklisted software within your environment. Automatically remove or block the software from future install.

## Software License Compliance

A central repository to store and manage all your software enterprise agreements and licenses. Proactively manage renewal dates through automated notifications. Store license attributes, such as license model, product keys, amount and financial information, such as PO information and cost.

## Software Metering

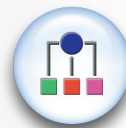

Avoid unnecessary purchases and optimize existing software licenses through powerful software metering. Find out what software is installed on your estate, who is using it and how often. Easily identify and reclaim unused software and redeploy elsewhere in your organization. Have the information you need at your fingertips and readily available to renegotiate exiting software agreements so that they reflect actual usage, saving your organization significant amounts of money.

## Software Asset Management Highlights

- License Repository to store all your organization's licenses in one place
- Support purchasing decisions
- Automate deployment of software, patches and service packs to groups of devices
- Easily automate the removal of blacklisted software
- Automate discovery of software and virtual machines
- Report on software license compliance
- Link ITAM and ITSM records - map software to licenses, hardware, people, purchase orders, vendors, contracts and support tickets
- Support for vendor licensing models

# Benefits of Software Asset Management with assyst ITAM

## ■ Manage software assets

Centralized management gives you the power to quickly install, upgrade, patch and uninstall software without desk-side visits.

## ■ Reduce license costs

Gain clarity on what you own and what you need, match the number of licenses purchased with the number consumed, and save up to 20 - 40% of your current software spend.

## ■ Reduce risk

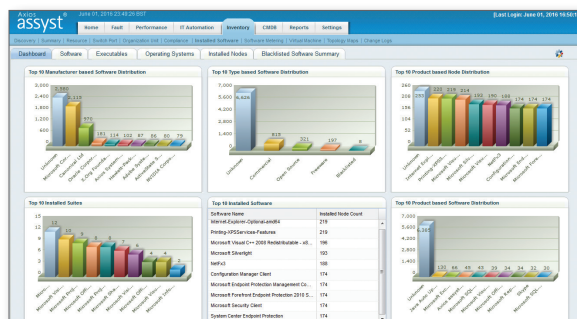

By gaining oversight and control over the use of software in the enterprise, organizations can actively manage their software license environment and take the pain out of vendor audits.

## ■ Negotiate volume contracts

Gain an enterprise-wide view of software, and draw together disparate software requirements to negotiate bulk purchase deals.

## ■ Vendor management

Manage vendors, contracts, purchase orders and support agreements in one location.

Dashboards provide a view of licenses owned versus licenses in use

Powerful search lets you find which software is in use by which users on which devices

## IT SERVICE MANAGEMENT & IT ASSET MANAGEMENT SOLUTIONS

*“Substantial cost cutting opportunities exist in monitoring usage of purchased applications. Depending upon the level of maturity, enterprises that implement software usage capabilities will achieve savings of 5% to 25% in the first year. After the first full cycle of vendor contract negotiations, the savings will likely stabilize at 2-3% in subsequent years.”*

**Gartner**

Gartner  
“Gartner Research confirms Software Savings of up to 25% with Usage Metering”

*“Your organization has a 65% chance of being audited by at least one software vendor in the next 12 months.”*
