

St. Jude patient Finley | craniopharyngioma

Finley's Story

When Finley was 5 years old, he was diagnosed with craniopharyngioma, a non-cancerous, aggressive brain tumor. At the time, proton therapy was not available in Canada, so his family turned to St. Jude Children's Research Hospital®. St. Jude freely shares the breakthroughs it makes, and every child saved at St. Jude means doctors and scientists worldwide can use that knowledge to save thousands more children. At St. Jude, Finley underwent 30 rounds of proton therapy, and now returns to St. Jude for regular scans, the latest of which showed the tumor is stable. "We love coming to St. Jude," said Finley's mom. "Finley enjoys spending time there, and we love that we're seeing doctors who specialize in his tumor type."
