Law enforcement agencies worldwide rely on video surveillance to remotely monitor people, property and infrastructure to deliver protective security and safer communities. However, real-time or post-event video review are labor-intensive, demanding of time and resources, and prone to human error and distraction. With tight budgets and limited staff, law enforcement can overcome their video surveillance challenges and unlock the full potential of video systems by implementing the BriefCam® Video Content Analytics Platform.

BriefCam’s innovative solutions drive exponential value from existing surveillance camera investments by making video searchable, actionable, and quantifiable. Powered by deep learning and artificial intelligence, the technology processes video; detects, identifies and classifies objects in the video; and indexes them to enable law enforcement to accelerate investigations, attain situational awareness, and derive operational intelligence. By making remote surveillance more effective and efficient, BriefCam helps police forces worldwide reduce risk to officers and staff, while driving intelligence and evidence collection.

With BriefCam Video Content Analytics, police and real-time crime centers can conserve time and resources with powerful forensic and intelligence solutions for reducing crime, collecting evidence, and promoting public safety with improved threat mitigation.

"BriefCam played an important role in helping law enforcement officers identify and ultimately locate the suspected terrorists. In the days following the Boston Marathon bombings, thousands of photographs and videos, many taken with cell phones, were provided to law enforcement officers assigned to the FBI’s Joint Terrorism Task Force (JTTF). Utilizing software developed by BriefCam, law enforcement officers and investigators were able to quickly review the photographs and videos and locate images of the two suspected terrorists. Undoubtedly, your company and its analytical product greatly facilitated the relatively speedy capture of one terrorist and the death of the other."

Kurt Schwartz
Undersecretary, Homeland Security & Emergency Management,
