

DATA PLATFORM

Modernization

Run workloads securely. Get the most of big data. Gain a high-performing infrastructure.

Are you still running applications on SQL Server 2005 or 2008? Do you want more value from your data? Are you considering a move to the cloud, but are unsure about next steps? Then it's time to move your data infrastructure to the next level. Upgrading to SQL 2017 or Azure SQL DB can help your organization stay compliant, improve performance, and enhance your security.

AMTRA can help you learn about the latest version of SQL Server and Azure Data Services, get familiar with the benefits of modernizing your data infrastructure, assess implementation and test drive new solutions with a Proof of Concept project.

Benefits

- Get more value out of your data
- Transform data into reliable information
- Improve performance, optimize cost, and achieve higher flexibility
- Cost savings and improved security from your and your client's data
- Data warehouse and big data solutions that scale on-demand to give you real-time analysis

Data Platform Modernization will help you understand how your organization can benefit from modernizing your existing and future Data Platforms.

AMTRA is offering free workshops to assess your project and build a project plan for your organization that includes an outline of the technical and functional steps required to deploy a solution that answers your needs, and then test-drive that solution with a proof of concept.

Get in touch with us to get started on your data plan today.
