

Global, Secure Connectivity & Collaboration

NEXEN

Industry: Oil & Gas
Location: Canada
Employees: 1,000+

SOLUTIONS PROVIDED

- o Microsoft 365
- o Microsoft Office 365 Business Premium

"We heard repeatedly that workers were more productive at home with their own devices than they were at work. Mobility and flexibility, access to data all the time, real-time communications, file sharing and collaborating and security were all features that led Nexen to a Microsoft 365 Powered Device solution."

JT Thompson, VP Services at
AMTRA Solutions

ENABLE SECURE, RAPID COLLABORATION & COMMUNICATION

Nexen, a Canadian based oil and gas company required a solution that would enable employees to connect with each other rapidly. Nexen also required all their applications to work securely on mobile devices. This would allow colleagues to share their expertise in a timely and effective way, improve customer service quality, increase customer engagement and deliver business strategy success. While some staff connected through email and collaborated through the local Intranet, the clear majority of colleagues weren't always behind a desk.

Nexen lacked the in-house infrastructure to house document templates and structures and lacked insight into user productivity. They did not have any solutions to send users personalized information updates based on what they're working on and what's trending around them.

THE SOLUTION: TROUBLESHOOT, CONFIGURE & BACK-UP

To address these challenges, AMTRA worked hand-in-hand with Nexen to devise a modern workplace solution, based on Microsoft 365 Powered Devices. Prior to implementing the solution, Nexen recognized an overspend on IT management, a loss dollar amount on inefficient users and organizational exposure to exponential risks.

AMTRA helped Nexen transition its intranet to Microsoft SharePoint Online. This immediately led to better employee's engagement with colleagues and the business by building collaborative sites to share ideas.

THE RESULT: IMPROVED EFFICIENCY AND PRODUCTIVITY

The Microsoft 365 solution project impacted 5,600 desktops/laptops. The effects were significant, according to the Microsoft ROI calculator, and are summarized below.

ROI	538%
RR	256%
Payback	9 months
3 year NPV	\$9,740,000 US
NPV/User	\$195,000 US
