 - performance related bonus
 - stock-options (BSCPE) plan
 - comprehensive healthcare insurance
 - flexible working hours

About Heyday

Heyday is an innovative start-up that is active in semiconductor products in the space of power management integrated circuits. Founded 5 years ago, Heyday has already developed truly innovative isolated gate drivers, based on its own patented technology. The gate drivers will be brought to the market in the coming months. Many new products and functionalities are in the pipeline and that is the reason why we would like to strengthen our team with one or more design engineer(s). Founded with the founders' money, business angels, and Bpifrance, Heyday has already more revenues than expenses. It has also received funding from the ADEME for one of its innovative R&D projects. Nevertheless, a funding round will take place in 2020 to allow for exponential growth.

Heyday is based in Grasse at the "Côte d'Azur" in France, 20 minutes from Cannes and 40 minutes from Nice and its airport.
